Epistemology And The Psychology Of Human Judgement:

Epistemology and the Psychology of Human Judgment Michael A Bishop, J. D. Trout, 2004-12-23 Bishop and Trout here present a unique and provocative new approach to epistemology the theory of human knowledge and reasoning Their approach aims to liberate epistemology from the scholastic debates of standard analytic epistemology and treat it as a branch of the philosophy of science The approach is novel in its use of cost benefit analysis to guide people facing real reasoning problems and in its framework for resolving normative disputes in psychology Based on empirical data Bishop and Trout show how people can improve their reasoning by relying on Statistical Prediction Rules SPRs They then develop and articulate the positive core of the book Their view Strategic Reliabilism claims that epistemic excellence consists in the efficient allocation of cognitive resources to reliable reasoning strategies applied to significant problems The last third of the book develops the implications of this view for standard analytic epistemology for resolving normative disputes in psychology and for offering practical concrete advice on how this theory can improve real people s reasoning This is a truly distinctive and controversial work that spans many disciplines and will speak to an unusually diverse group including people in epistemology philosophy of science decision theory cognitive and clinical psychology and ethics and public policy

between explanations and the scientists who construct and use them They focus on understanding as the cognitive state that is a goal of explanation and on the understanding of theories and models as a means to this end The chapters in this book highlight the multifaceted nature of the process of scientific research The contributors examine current uses of theory models simulations and experiments to evaluate the degree to which these elements contribute to understanding Their analyses pay due attention to the roles of intelligibility tacit knowledge and feelings of understanding Furthermore they investigate how understanding is obtained within diverse scientific disciplines and examine how the acquisition of understanding depends on specific contexts the objects of study and the stated aims of research

Metaepistemology Conor McHugh, Jonathan Way, Daniel Whiting, 2018-12-06 Epistemology like ethics is normative Just as ethics addresses questions about how we ought to act so epistemology addresses questions about how we ought to believe and enquire We can also ask metanormative questions What does it mean to claim that someone ought to do or believe something Do such claims express beliefs about independently existing facts or only attitudes of approval and disapproval towards certain pieces of conduct How do putative facts about what people ought to do or believe fit in to the natural world In the case of ethics such questions have been subject to extensive and systematic investigation yielding the thriving subdiscipline of metaethics Yet the corresponding questions have been largely ignored in epistemology there is no serious subdiscipline of metaepistemology This surprising state of affairs reflects a more general tendency for ethics and epistemology to be carried out largely in isolation from each other despite the important substantive and structural connections between them A movement to overturn the general tendency has only recently gained serious momentum and has yet to tackle metanormative questions in a sustained way This edited collection aims to stimulate this project and thus advance the new subdiscipline of metaepistemology Its original essays draw on the sophisticated theories and frameworks that have been developed in metaethics concerning practical normativity examine whether they can be applied to epistemic normativity and consider what this might tell us about both
