Equations Of Mixed Type:

   Equations of Mixed Type Modest Mikha_lovich Smirnov,1978-12-31   **Equations of the Mixed Type** A. V. Bitsadze,2014-05-16 Equations of the Mixed Type compiles a series of lectures on certain fundamental questions in the theory of equations of mixed type This book investigates the series of problems concerning linear partial differential equations of the second order in two variables and possessing the property that the type of the equation changes either on the boundary of or inside the considered domain Topics covered include general remarks on linear partial differential equations of mixed type study of the solutions of second order hyperbolic equations with initial conditions given along the lines of parabolicity and study of the solutions of second order elliptic equations for a domain the boundary of which includes a segment of the curve of parabolic degeneracy The problem of Tricomi and other mixed problems are also deliberated in this text This publication is a good reference for students and researchers conducting work on the theory of equations of mixed type   **Linear and Quasilinear Complex Equations of Hyperbolic and Mixed Types** Guo Chun Wen,2002-08-22 This volume deals with first and second order complex equations of hyperbolic and mixed types Various general boundary value problems for linear and quasilinear complex equations are investigated in detail To obtain results for complex equations of mixed types some discontinuous boundary value problems for elliptic complex equations are discusse   **Non-classical Equations of Mixed Type and Their Applications in Gas Dynamics** Aleksandr Grigor'evich Kuz'min,1992   **Forward and Inverse Problems for Hyperbolic, Elliptic and Mixed Type Equations** Alexander G. Megrabov,2012-05-24 Inverse problems are an important and rapidly developing direction in mathematics mathematical physics differential equations and various applied technologies geophysics optic tomography remote sensing radar location etc In this monograph direct and inverse problems for partial differential equations are considered The type of equations focused are hyperbolic elliptic and mixed elliptic hyperbolic The direct problems arise as generalizations of problems of scattering plane elastic or acoustic waves from inhomogeneous layer or from half space The inverse problems are those of determination of medium parameters by giving the forms of incident and reflected waves or the vibrations of certain points of the medium The method of research of all inverse problems is spectral analytical consisting in reducing the considered inverse problems to the known inverse problems for the Sturm Liouville equation or the string equation Besides the book considers discrete inverse problems In these problems an arbitrary set of point sources emissive sources oscillators point masses is determined   Elliptic, Hyperbolic and Mixed Complex Equations with Parabolic Degeneracy Guo Chun Wen,2008 In the recent half century many mathematicians have investigated various problems on several equations of mixed type and obtained interesting results with important applications to gas dynamics However the Tricomi problem of general mixed type equations of second order with parabolic degeneracy has not been completely solved particularly the Tricomi and Frankl problems for general Chaplygin equation in multiply connected domains posed by L Bers and the existence regularity of solutions of the above problems for

mixed equations with non smooth degenerate curve in several domains posed by J M Rassias The method revealed in this book is unlike any other in which the hyperbolic number and hyperbolic complex function in hyperbolic domains and the complex number and complex function in elliptic domains are used The corresponding problems for first order complex equations with singular coefficients are first discussed and then the problems for second order complex equations are considered where we pose the new partial derivative notations and complex analytic methods such that the forms of the above first order complex equations in hyperbolic and elliptic domains are wholly identical In the meantime the estimates of solutions for the above problems are obtained hence many open problems including the above TricomiOCo Bers and TricomiOCoFranklOCoRassias problems can be solved Sample Chapter s Chapter 1 Elliptic Complex Equations of First Order 247 KB Contents Elliptic Complex Equations of First Order Elliptic Complex Equations of Second Order Hyperbolic Complex Equations of First and Second Orders First Order Complex Equations of Mixed Type Second Order Linear Equations of Mixed Type Second Order Quasilinear Equations of Mixed Type Readership Graduate students and academics in analysis differential equations and applied mathematics **The Dirichlet Problem for Elliptic-Hyperbolic Equations of Keldysh Type** Thomas H. Otway,2012-01-06 Partial differential equations of mixed elliptic hyperbolic type arise in diverse areas of physics and geometry including fluid and plasma dynamics optics cosmology traffic engineering projective geometry geometric variational theory and the theory of isometric embeddings And yet even the linear theory of these equations is at a very early stage This text examines various Dirichlet problems which can be formulated for equations of Keldysh type one of the two main classes of linear elliptic hyperbolic equations Open boundary conditions in which data are prescribed on only part of the boundary and closed boundary conditions in which data are prescribed on the entire boundary are both considered Emphasis is on the formulation of boundary conditions for which solutions can be shown to exist in an appropriate function space Specific applications to plasma physics optics and analysis on projective spaces are discussed From the preface Equations of Mixed Type Modest Mikhaĭlovich Smirnov,1978 *Partial Differential Equations in China* Chaohao Gu,Xiaxi Ding,Chung-Chun Yang,2012-12-06 In the past few years there has been a fruitful exchange of expertise on the subject of partial differential equations PDEs between mathematicians from the People s Republic of China and the rest of the world The goal of this collection of papers is to summarize and introduce the historical progress of the development of PDEs in China from the 1950s to the 1980s The results presented here were mainly published before the 1980s but having been printed in the Chinese language have not reached the wider audience they deserve Topics covered include among others nonlinear hyperbolic equations nonlinear elliptic equations nonlinear parabolic equations mixed equations free boundary problems minimal surfaces in Riemannian manifolds microlocal analysis and solitons For mathematicians and physicists interested in the historical development of PDEs in the People s Republic of China **Projection-iterative Methods for Solution of Operator Equations** Nikolaĭ Stepanovich Kurpel',1976 Introduction to Partial Differential
