Equivariant Pontrjagin Classes and Applications to Orbit Spaces D. B. Zagier, 2006-11-15 Equivariant Pontrjagin Classes and Applications to Orbit Spaces D. B. Zagier, 1972-10-04 **Handbook of Geometry and Topology of Singularities IV** José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2023-10-07 This is the fourth volume of the Handbook of Geometry and Topology of Singularities a series that aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of twelve chapters which provide an in depth and reader friendly survey of various important aspects of singularity theory Some of these complement topics previously explored in volumes I to III Amongst the topics studied in this volume are the Nash blow up the space of arcs in algebraic varieties determinantal singularities Lipschitz geometry indices of vector fields and 1 forms motivic characteristic classes the Hilbert Samuel multiplicity and comparison theorems that spring from the classical De Rham complex Singularities are ubiquitous in mathematics and science in general Singularity theory is a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other subjects Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook **Topology of Algebraic Varieties and Singularities** José Ignacio Cogolludo-Agustín, Eriko Hironaka, 2011 This volume contains invited expository and research papers from the conference Topology of Algebraic Varieties in honour of Anatoly Libgober s 60th birthday held June 22 26 2009 in Jaca Spain *Invariant Theory of Finite Groups* Mara D. Neusel, Larry Smith, 2010-03-08 The questions that have been at the center of invariant theory since the 19th century have revolved around the following themes finiteness computation and special classes of invariants This book begins with a survey of many concrete examples chosen from these themes in the algebraic homological and combinatorial context In further chapters the authors pick one or the other of these questions as a departure point and present the known answers open problems and methods and tools needed to obtain these answers Chapter 2 deals with algebraic finiteness Chapter 3 deals with combinatorial finiteness Chapter 4 presents Noetherian finiteness Chapter 5 addresses homological finiteness Chapter 6 presents special classes of invariants which deal with modular invariant theory and its particular problems and features Chapter 7 collects results for special classes of invariants and coinvariants such as pseudo reflection groups and representations of low degree If the ground field is finite additional problems appear and are compensated for in part by the emergence of new tools One of these is the Steenrod algebra which the authors introduce in Chapter 8 to solve the inverse invariant theory problem around which the authors have organized the last three chapters The book contains numerous examples to illustrate the theory often of more than passing interest and an appendix on commutative graded algebra which provides some of the required basic background

There is an extensive reference list to provide the reader with orientation to the vast literature

Homotopy Theory of Function Spaces and Related Topics Yves Félix, Gregory Lupton, Samuel B. Smith, 2010 This volume contains the proceedings of the Workshop on Homotopy Theory of Function Spaces and Related Topics which was held at the Mathematisches Forschungsinstitut Oberwolfach in Germany from April 5 11 2009 This volume contains fourteen original research articles covering a broad range of topics that include localization and rational homotopy theory evaluation subgroups free loop spaces Whitehead products spaces of algebraic maps gauge groups loop groups operads and string topology In addition to reporting on various topics in the area this volume is supposed to facilitate the exchange of ideas within Homotopy Theory of Function Spaces and promote cross fertilization between Homotopy Theory of Function Spaces and other areas With these latter aims in mind this volume includes a survey article which with its extensive bibliography should help bring researchers and graduate students up to speed on activity in this field as well as a problems list which is an expanded and edited version of problems discussed in sessions held at the conference The problems list is intended to suggest directions for future work

The Geometry of Spherical Space Form Groups Peter B. Gilkey, 1989 In this volume the geometry of spherical space form groups is studied using the eta invariant The author reviews the analytical properties of the eta invariant of Atiyah Patodi Singer and describes how the eta invariant gives rise to torsion invariants in both K theory and equivariant bordism The eta invariant is used to compute the K theory of spherical space forms and to study the equivariant unitary bordism of spherical space forms and the Pinc and Spinc equivariant bordism groups for spherical space form groups This leads to a complete structure theorem for these bordism and K theory groups There is a deep relationship between topology and analysis with differential geometry serving as the bridge This book is intended to serve as an introduction to this subject for people from different research backgrounds This book is intended as a research monograph for people who are not experts in all the areas discussed It is written for topologists wishing to understand some of the analytic details and for analysts wishing to understand some of the topological ideas It is also intended as an introduction to the field for graduate students

Hilbert Schemes of Zero-Dimensional Subschemes of Smooth Varieties Lothar Göttsche, 2006-11-15 In this book we study Hilbert schemes of zero dimensional subschemes of smooth varieties and several related parameter varieties of interest in enumerative geometry The main aim here is to describe their cohomology and Chow rings Some enumerative applications are also given The Weil conjectures are used to compute the Betti numbers of many of the varieties considered thus also illustrating how this powerful tool can be applied The book is essentially self contained assuming only a basic knowledge of algebraic geometry it is intended both for graduate students and research mathematicians interested in Hilbert schemes enumerative geometry and moduli spaces
