*Colour Vision Deficiencies XII* B. Drum, 2012-12-06 From the 98 presentations of the XIIth Symposium on Colour Vision Deficiencies 61 were selected after peer review and revision by the authors In addition to these contributions this volume contains a cumulative index to all authors in the IRGCVD proceedings since the first one in 1968 including the present volume The contents include contributions on basic questions of anatomical and electrophysiological organisation of the neural pathways underlying colour vision and on ways in which disturbances of these pathways can produce acquired colour vision deficiencies Further contributions deal with genetics and congenital red green colour deficiencies and colour vision testing The resulting publication contains much of interest to basic vision scientists as well as to specialists in colour vision deficiencies

**Retinal Pigment Epithelium and Macular Diseases** Gabriel Coscas, Felice Cardillo Piccolino, 2012-12-06 This volume of Documenta Ophthalmologica Proceedings Series collects the scientific papers presented at the 2nd International Symposium on Retinal Pigment Epithelium and the 4th Meeting of the European Macula Group held in Genoa May 29 June 1 1996 The Symposium on Retinal Pigment Epithelium was promoted by

the University Eye Clinic of Genoa as the natural continuation of the first Symposium held with great success in Genoa in 1988. The previous Meetings of the European Macula Group were held in Coimbra 1988, Crete 1989 and Athens 1994. I was greatly pleased and honoured to host the fourth congress of this distinguished Society and I am grateful to Gabriel Coscas, Jose Cunha Vaz and George Theodossiadis, founders of the Society for selecting Genoa on this occasion. The two meetings integrated well in an unicuim and brought together an exceptional number of outstanding retinal specialists coming from all over the world. All the aspects of the current research concerning retinal pigment epithelial and macular diseases were covered. Several interesting presentations regarded new techniques of retinal and choroidal imaging. A full session was dedicated to the latest advances in culture and transplantation of retinal pigment epithelial cells. Age related macular degeneration was a major subject for discussion including new approaches to treatment. This topic was high lighted by a mini symposium on drusen including a series of superb lectures on classification, clinicopathological studies, indocyanine green imaging and laser treatment for prevention of choroidal neovascularization.

**Colour Vision Deficiencies X** B. Drum, J.D. Moreland, A. Serra, 2012-12-06. Since its inception the International Research Group on Colour Vision Deficiencies IRGCVD has followed the policy that the Symposium Proceedings should be as close as possible to a complete record of the scientific content of the meeting. This policy has the advantage of providing an accurate picture of the current state of the art in research on color vision deficiencies but it also has the disadvantage that papers typically span a wide range of quality. In this volume however we have instituted a system of peer review in an effort to enhance scientific quality as much as possible while continuing our past policy of publishing all submitted manuscripts. In addition to being edited for English composition and grammar each of the papers included here has been carefully reviewed by an IRGCVD member selected for his or her expertise in the specific topic of the paper. Reviewers were instructed to include in their comments suggestions for improvement rather than recommendation or rejection. In our opinion this review process recommendations for publication has resulted in substantial improvement of many of the articles and has enhanced the value of the publication. We are pleased to acknowledge the efforts of our reviewers and offer them our sincere thanks for their important contributions to Colour Vision Deficiencies X.

The Editors B Drum, J D Moreland, A Serra eds. *Colour Vision Deficiencies X* p xiii. *Basic and Clinical Applications of Vision Science* V. Lakshminarayanan, 2012-12-06. *Basic and Clinical Applications of Vision Sciences* contains the edited papers presented at the Enoch Vision Science Symposium April 27-30 1996 which was organized in honor of the pioneer in vision science Dr Jay M Enoch. Dr Enoch served for twelve years as Dean School of Optometry University of California Berkeley. The book is organized along the lines of Dr Enoch's contributions to vision science but is not limited to these topics. Of special note the reader will find papers on important new developments in photoreceptor, ophthalmic and visual optics, retinal imaging, ophthalmic physiology and pathophysiology, visual psychophysics and visual techniques. The papers are grouped into the following sections: photoreceptor, optics, ophthalmic and visual optics, binocular vision.

**Visual Electrodiagnosis in Systemic Diseases** E. Schmöger, J. Kelsey, 2012-12-06 The research workers at the Eye Clinic of the Medical Academy of Erfurt are proud of having been entrusted for the second time with the organization of the yearly ISCEV symposium Twelve years ago the 6th Symposium was held in Erfurt This time we turned to Reinhardsbrunn an old castle situated in the vicinity of Erfurt on the fringes of the wonderful mountainscape of the Thuringian Forest Reinhardsbrunn castle serves today as a holiday hotel and convention

place It seemed to us to be the right place for carrying on the discussions in a comfortable and informal way after the actual sessions were over Comparing the scientific reports read at the 6th and 17th Symposium both organized in Erfurt one readily becomes aware of the impressive advances in our rapidly developing field of interest The technical and more specifically the electronic advancements have been enormous especially in the field of recording and processing the visually evoked cortical potentials Actually the addition of this special field of study to our realm led to the renaming of the Society some years ago Moreover it became more and more obvious that interdisciplinary cooperation between ophthalmologists physiologists physicists technologists and mathematicians is essential This is also reflected in the composition of our membership

*Visual Psychophysics* Dorothea Jameson, L.M. Hurvich, 2012-12-06 This volume on Visual Psychophysics documents the current status of research aimed toward understanding the intricacies of the visual mechanism and its laws of operation in intact human perceivers As can be seen from the list of contributors the problems of vision engage the interest and experimental ingenuity of investigators from a variety of disciplines Thus we find authors affiliated with departments of biology medical and physiological physics ophthalmology physics physiology and anatomy psychology laboratories of neurophysiology medical clinics schools of optometry visual and other types of research institutes A continuing interplay between psychophysical studies and physiological work is everywhere evident As more information about the physiological basis of vision accumulates and new studies and analyses of receptor photochemistry and the neurophysiology of retina and brain appear psychophysical studies of the intact organism become more sharply focused sometimes more complex and often more specialized Technological advances have increased the variety and precision of the stimulus controls and advances in measurement techniques have reopened old problems and stimulated the investigation of new ones In some cases new concepts are being drawn in to help further our understanding of the laws by which the visual mechanism operates in other cases ideas enunciated long ago have been reevaluated developed more fully and reified in terms of converging evidence from both psychophysical experiments and unit recordings from visual cells
