Davies,2011-10-17 In order to understand architecture in all its cultural complexity it is necessary to grasp such basic concepts as representation form and space The aim of this book is to provide teachers students practising architects and general readers with a set of ideas that will enrich their conversation their writing and above all their thinking about architecture The book is divided into eight chapters each covering a particular aspect of architecture and introduces difficult concepts gradually Architectural theorists and philosophers are mentioned in passing and their works are listed in the bibliography but they are not the subject of the book Architecture rather than philosophy is at the centre of the picture The aim is to enable the reader to understand architecture in all its aspects rather than to learn the names of particular theorists Written in a conversational style Thinking about Architecture is an invaluable and accessible standard introduction to architectural theory *Architecture in Detail II* Graham Bizley,2010-08-20 Following on from Graham Bizley s successful *Architecture in Detail* *Architecture in Detail II* presents 40 case studies of detailing on recent construction projects Over 150 full colour drawings and photos provide a reference compendium for the professional architect seeking detailing inspiration Originally featured in *Building Design s In Detail* magazine the included projects represent some of the most interesting and innovative techniques in recent architecture Graham Bizley s beautifully presented detail drawings allow the architect to easily see how ideas and techniques can be applied to other projects The book is organised by building type for quick and easy reference *The Temporality of Building* Yun Gao,Nicholas Temple,Jing Xiao,2025-03-31 This book examines the role that time plays in the life of buildings adopting a comparative study of this influence between European and Chinese traditions Whilst issues of time in architecture have attracted increasing interest by academics in the West challenging the dominant modernist precepts of space there is little understanding of the subject in China and how these compare to historical and contemporary perspectives in Europe A guiding premise of the investigation is that notions of building time require insight into how cultural habits commingle with natural rhythms or what David Leatherbarrow calls concurrency Rather than examining specific buildings the first three chapters apply three key themes language ritual and heritage as cultural lenses to reveal differences and similarities between the two traditions Through these lenses buildings interiors and their exterior spaces churches cathedrals temples palaces gardens and courtyard houses are explored to demonstrate how building time involves particular situations settings and their correlating relationships to past traditions In the final chapter we consider notions of time in the context of contemporary buildings in Europe and China drawing on the earlier historical investigations and addressing globalising influences This book would be of interest to architects architectural theorists historians philosophers sociologists and anthropologists *The Fundamentals of Creative Design* Gavin Ambrose,Paul Harris,2011-08-31 Introduces students to the various aspects of the graphic design This title provides a fresh introduction to the key elements of the discipline and looks at the following topics design thinking format layout grids typography colour image and print and finish *Basics Architecture 02: Construction & Materiality* Lorraine Farrelly,2009 This volume

explores the key materials used in construction today looking at their history development and practical application in contemporary architecture
