Erlang Programmation:

Erlang Programming Francesco Cesarini,Simon Thompson,2009-06-11 This book is an in depth introduction to Erlang a programming language ideal for any situation where concurrency fault tolerance and fast response is essential Erlang is gaining widespread adoption with the advent of multi core processors and their new scalable approach to concurrency With this guide you ll learn how to write complex concurrent programs in Erlang regardless of your programming background or experience Written by leaders of the international Erlang community and based on their training material Erlang Programming focuses on the language s syntax and semantics and explains pattern matching proper lists recursion debugging networking and concurrency This book helps you Understand the strengths of Erlang and why its designers included specific features Learn the concepts behind concurrency and Erlang s way of handling it Write efficient Erlang programs while keeping code neat and readable Discover how Erlang fills the requirements for distributed systems Add simple graphical user interfaces with little effort Learn Erlang s tracing mechanisms for debugging concurrent and distributed systems Use the built in Mnesia database and other table storage features Erlang Programming provides exercises at the end of each chapter and simple examples throughout the book **Functional and Logic Programming** Masami Hagiya,Philip Wadler,2006-04-06 This book constitutes the refereed proceedings of the 8th International Symposium on Functional and Logic Programming FLOPS 2006 held in Fuji Susono Japan in April 2006 The 17 revised full papers presented together with 2 invited contributions were carefully reviewed and selected from 51 submissions The papers are organized in topical sections on data types FP extensions type theory LP extensions analysis contracts as well as Web and GUI Functional and Logic Programming Matthias Blume,Naoki Kobayashi,Germán Vidal-Oriola,2010-04-11 This book constitutes the refereed proceedings of the 10th International Symposium on Functional and Logic Programming FLOPS 2010 held in Sendai Japan in April 2010 The 21 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 49 submissions The papers are organized in topical sections on types program analysis and transformation foundations logic programming evaluation and normalization term rewriting and parallelism and control **Programming Multi-Agent Systems** Mehdi Dastani,Jomi F. Hübner,Brain Logan,2013-05-29 This book constitutes the thoroughly refereed post conference proceedings of the 10th International Workshop on Programming Multi Agents Systems held in Valencia Spain in June 2012 The 10 revised full papers presented were carefully selected from 14 submissions covering a wide range of topics in multi agent system programming languages including language design and efficient implementation agent communication and robot programming I addition to these regular papers the volume includes six papers from the Multi Agent programming Contest 2012 MAPC **Implementations of Logic Programming Systems** Evan Tick,Giancarlo Succi,2012-12-06 This volume is a collection of research papers in the area of the implementation of logic programming systems It will be of immediate interest to practitioners who seek an understanding of how to efficiently

manage memory generate fast code perform sophisticated static analyses and design high performance runtime features A major theme throughout the book is how to effectively leverage host implementation systems and technologies to implement target systems The book is also beneficial for future reference because it summarizes a wealth of systems implementation experience of the researchers shaping the field over the past ten years Another theme of the book is compilation techniques to boost performance The field of static analysis for logic programs is a rapidly developing field that deserves a volume on its own Implementations of Logic Programming Systems is an excellent reference and may be used as a text for a course on the subject   *Programming Language Explorations* Ray Toal,Rachel Rivera,Alexander Schneider,Eileen Choe,2017-08-09 Programming Language Explorations is a tour of several modern programming languages in use today The book teaches fundamental language concepts using a language by language approach As each language is presented the authors introduce new concepts as they appear and revisit familiar ones comparing their implementation with those from languages seen in prior chapters The goal is to present and explain common theoretical concepts of language design and usage illustrated in the context of practical language overviews Twelve languages have been carefully chosen to illustrate a wide range of programming styles and paradigms The book introduces each language with a common trio of example programs and continues with a brief tour of its basic elements type system functional forms scoping rules concurrency patterns and sometimes metaprogramming facilities Each language chapter ends with a summary pointers to open source projects references to materials for further study and a collection of exercises designed as further explorations Following the twelve featured language chapters the authors provide a brief tour of over two dozen additional languages and a summary chapter bringing together many of the questions explored throughout the text Targeted to both professionals and advanced college undergraduates looking to expand the range of languages and programming patterns they can apply in their work and studies the book pays attention to modern programming practice covers cutting edge languages and patterns and provides many runnable examples all of which can be found in an online GitHub repository The exploration style places this book between a tutorial and a reference with a focus on the concepts and practices underlying programming language design and usage Instructors looking for material to supplement a programming languages or software engineering course may find the approach unconventional but hopefully a lot more fun   *Functional and Logic Programming* Zhenjiang Hu,Mario Rodriquez-Artalejo,2002-09-02 This book constitutes the refereed proceedings of the 6th International Symposium on Functional and Logic Programming FLOPS 2002 held in Aizu Japan in September 2002 The 15 revised full papers presented together with 3 full invited papers were carefully reviewed and selected from 27 submissions The papers are organized in topical sections on constraint programming program transformation and analysis semantics rewriting compilation techniques and programming methodology   **Introduction to Concurrency in Programming Languages** Matthew J. Sottile,Timothy G. Mattson,Craig E Rasmussen,2009-09-28 Illustrating the effect of concurrency on programs written in

familiar languages this text focuses on novel language abstractions that truly bring concurrency into the language and aid analysis and compilation tools in generating efficient correct programs It also explains the complexity involved in taking advantage of concurrency with regard to program correctness and performance The book describes the historical development of current programming languages and the common threads that exist among them It also contains several chapters on design patterns for parallel programming and includes quick reference guides to OpenMP Erlang and Cilk Ancillary materials are available on the book s website   Concepts, Techniques, and Models of Computer Programming Peter Van Roy,Seif Haridi,2004-02-20 Teaching the science and the technology of programming as a unified discipline that shows the deep relationships between programming paradigms This innovative text presents computer programming as a unified discipline in a way that is both practical and scientifically sound The book focuses on techniques of lasting value and explains them precisely in terms of a simple abstract machine The book presents all major programming paradigms in a uniform framework that shows their deep relationships and how and where to use them together After an introduction to programming concepts the book presents both well known and lesser known computation models programming paradigms Each model has its own set of techniques and each is included on the basis of its usefulness in practice The general models include declarative programming declarative concurrency message passing concurrency explicit state object oriented programming shared state concurrency and relational programming Specialized models include graphical user interface programming distributed programming and constraint programming Each model is based on its kernel language a simple core language that consists of a small number of programmer significant elements The kernel languages are introduced progressively adding concepts one by one thus showing the deep relationships between different models The kernel languages are defined precisely in terms of a simple abstract machine Because a wide variety of languages and programming paradigms can be modeled by a small set of closely related kernel languages this approach allows programmer and student to grasp the underlying unity of programming The book has many program fragments and exercises all of which can be run on the Mozart Programming System an Open Source software package that features an interactive incremental development environment   **Introducing Erlang** Simon St. Laurent,2013 Introducing Erlang gives readers a gentle introduction to this powerful and reliable functional language Examples demonstrate how to make Erlang work on its own terms rather than attempting to translate from other languages   Central European Functional Programming School Zoltán Horváth,Rinus Plasmeijer,Viktoria Zsók,2011-01-04 The peer reviewed papers featured in this volume were chosen from the revised notes of lectures given at the third CEFP School in 2009 They cover a number of topics such as design patterns semantics types and advanced programming in various FP languages   Parallel Programming and Applications Peter Fritzson,Leif Finmo,1995 ZEUS Centres of European Supercomputing is a network for information exchange and co operation between European Supercomputer Centres During the fall of 1994 the idea was put forward to start an annual workshop to stimulate the
