Stevens, 2017-07-12 Despite the increase in meditation studies the quality remains variable many of them are trivial and most remain unreplicated Research on meditation has been plagued by insubstantial theorizing global claims and the substitution of belief systems for grounded hypotheses Meditation punctures some of the myths about meditation while retaining a place of value for meditation as a normal human function In each chapter includes discussion of the major questions addressed followed by a detailed critique of important theoretical clinical and research issues In several instances the reader may find that questions seem to beget questions research bearing upon certain issues may be contradictory or not yet of sufficient thoroughness In these cases the author suggests the specific future research necessary to resolve the questions posed so that claims about meditation are justified and which are not The profession of psychology itself is and has been in a polarized debate between the practitioners and the experimentalists The

latter accuse the former of being soft non empirical non scientific while practitioners accuse the experimentalists of conducting research which is essentially irrelevant to human concerns This approach provides a bridge between research and clinical practice Meditation provides an encompassing survey of the topic nearly forty tables and figures sample questionnaires evaluations and programs and a detailed overview of a controversial field Shapiro separates self regulation with self delusion to outline questions and possible answers      Geriatrics Handbook Venkit S. Iyer MD FACS - David Bernstein MD FACP, 2023-06-26 People are living longer Life expectancy has doubled in the last two hundred years We expect the number of centenarians to be over 200 000 in the next ten years Those living into their eighties and nineties will be common Over the next ten years it is possible that nearly 30 percent of the population will be retired seniors above the age of sixty five Increasing longevity and aging has its positives and negatives It is desirable to see that people are living longer but they also face an increasing number of health care and socioeconomic issues It is a well established fact that health care costs increase toward the end of life Geriatrics is a medical specialty of providing health care for the older adult Their health care needs differ somewhat from that of the younger population This handbook addresses various medical problems as it relates to older patients Prevention of health hazards and expression of compassionate care deserve as much attention as providing appropriate medical care Hence the book is divided into those sections This handbook is written for the following Medical professionals who render much of the current geriatric care in many parts of the world Physicians physician assistants nurses allied professionals and gerontologists Students interns residents fellows those who intend to provide care to aging adults Aging adults who want a better understanding of aging and health related problems Caregivers and family members of aging adults who want and need a handbook to understand aging and important issues aging adults face Health care administrators those who run facilities attending to the health needs of our aging population Awareness of aging adults needs palliative care and end of life issues with their emotional moral and financial aspects are often ignored or forgotten in the busy life of a medical practitioner Today medical science focuses more on short term fixes and immediate problem solving instead of treating the whole person Hence a considerable amount of a senior s care falls on the shoulders of nurses aides and on family members The practice of geriatric medicine is not attractive to many young physicians Currently modern technology procedures and frontiers of medical advances are much more attractive exciting and more lucrative although geriatrics is a well recognized field in Western medicine The importance of geriatric care is gathering momentum in the rest of the world as more people are aging The authors sincerely hope this handbook will illuminate the health care needs of our aging population
