MACHINE LEARNING APPLICATIONS IN HEALTHCARE Bhargavi Posinasetty, 2024-04-18 The study of healthcare data collection transmission processing storage and retrieval is called healthcare informatics This area of study is crucial for preventing sickness detecting diseases early diagnosing them early and treating them early In the field of healthcare informatics the sole data that is deemed trustworthy pertains to diseases patient records and the computational processes needed to decipher this data In the past 20 years traditional medical practices in the US have poured a lot of money on cutting edge computing and technology infrastructure to help them better serve patients doctors and academics Much effort has gone into improving the quality of medical care that can be delivered using these methods The driving force behind all of these endeavors was a desire to provide patients with healthcare that was not only affordable and of high quality but also entirely anxiety free Thanks to these initiatives the value of computational tools for facilitating prescriptions and referrals establishing and maintaining EHR and advancing digital medical imaging technology has been increasingly apparent The installation and administration of electronic health records EHR can also be facilitated by these instruments Clinical trials have demonstrated that computerized physician order entry CPOE has the potential to enhance patient care while decreasing medication errors and side effects By utilizing CPOE doctors may quickly access relevant patient data without leaving the screen where they are inputting prescriptions The patient's medical history alerts the treating physician to any potential adverse reactions in advance Another perk of CPOE is that it lets doctors track their orders as they progress through the system This provides an additional tool for doctors to assess prescription issues and revise them to remove human error as a potential cause A logical outgrowth of AI research machine learning emerged with the field's maturation Researchers and doctors often turn to machine learning when faced with challenging statistical computations When people talk about healthcare informatics they usually imply the study of how to use machine learning in conjunction with healthcare data to find important trends in healthcare That is why healthcare informatics is all on finding patterns in data so you can learn more The broad usage of electronic health records EHRs has helped bring down the cost of medical treatment by making it easier for hospitals to access and exchange their patients medical information Cuts to overhead and elimination of superfluous health exams likely contributed to this price drop Nevertheless with the current state of EHR administration it is difficult to collect and analyze clinical data for trends and patterns across distinct populations This is because there is now a great deal of uncertainty around the administration of EHR systems The American Recovery and Reinvestment Act ARRA of 2009 and similar programs have made great strides in the direction of standardizing the digitalization of medical records This makes the possibility of building massive medical databases a real possibility When data is retrieved from these massive archives machine learning may be employed to create forecasts and comprehend patterns in other domains Finding strategies to avoid

the computational difficulties that are preventing the distribution sharing and standardization of electronic health records EHRs is the fundamental objective of research that is being conducted in this area Because these databases contain sensitive information on patients the objective is to create open access databases that are not just secure but also resistant to a wide variety of cyber threats This is because the databases contain sensitive information about individual patients The regional medical databases that are given below are some samples of some of the most well known databases in the country Before these vast data repositories of medical information can be developed there are a number of obstacles that need to be overcome as will be illustrated in the following sections substantial expenditures in research and computer resources are required in order to handle these challenges In order to resolve these challenges it is necessary to have a significant amount of money For instance in order to integrate newly developed technologies for medical devices and the data that they generate it will be necessary to manage data structures that are always evolving in order to accommodate these new technologies It is inevitable that this will occur due to the fact that it will be essential to adapt to the new technology

Post-acute sequelae of COVID-19 infection (PASC): Implications for geriatric and neurological care Patricia C. Heyn,Elena Philippou,Ahmed Negm,Ted Kheng Siang Ng, Vanina Dal Bello-Haas,Flávia H. Santos,2023-06-29

Neuropsychology for Occupational Therapists June Grieve,Linda Maskill,2013-05-08 The third edition of this successful textbook is written primarily for undergraduate students of occupational therapy and for practitioners working in the field of cognitive rehabilitation Those in other health and related professions who work in the field of brain injury will gain an understanding of how cognition and its impairment can affect behaviour The content of the second edition has been expanded and updated to reflect advances in neuropsychology and to incorporate an evidence based consideration of occupational therapy practice Written in a clear and user friendly style this book provides a basic guide to normal cognition The impact of cognitive impairments upon everyday living is explored and guidance is given upon the planning and implementation of rehabilitation to optimise occupational performance
