

EVOLUTION OF STARS

After 10 billion years, the small star will run out of hydrogen and starts fusing helium, which causes the star to expand to a red giant

Planetary Nebula

After the star runs out of helium, the star will try to combine carbon, which the star can't combine. So the gas spreads apart from the star leaving behind a carbon dense white dwarf.

Small Star

Red Giant

White Dwarf

When the white dwarf runs out of its remaining energy, it loses its brightness and becomes a brown dwarf.

After the star explodes, the star can do two different things based on its size

1. It can form a very dense NEUTRON STAR
2. It can form the most densest object in the universe, a BLACK HOLE

When a massive star runs out of hydrogen, it expands and will make all kind of elements until it starts forming Iron

Supernova

When it has only iron left, gravity will collapse the star until it explodes from the pressure

Thronson, 1986 First Stars III Brian W. O'Shea, Alexander Heger, Tom Abel, 2008-04-04 This conference explored the formation life and death of the earliest stars also known as Population III stars and their impact on subsequent structure formation and chemical evolution of the universe First Stars III covered a wide range of observational topics including star formation stellar evolution supernovae and the search for primordial and metal poor stars in the galactic halo INIS Atomindex, 1988 *International Aerospace Abstracts*, 1998 Populations of High-Energy Sources in Galaxies (IAU S230) International Astronomical Union. Symposium, 2006-06-15 For the last 40 years astronomers have observed sources of

intense X ray radiation from beyond our Solar System These have been associated with remarkable objects such as neutron stars and black holes Current satellite observatories have enabled us to extend the studies of these objects from the Milky Way and Magellanic Clouds to individual X ray sources in other galaxies At the same time imaging facilities at gamma rays and TeV energies have improved enormously leading to many further discoveries within our own galaxy This Symposium presents an overview of these new developments covering detailed studies of individual sources within the Milky Way global descriptions of X ray source populations in other galaxies and less resolved relatives at high redshift Galaxy nuclei and diffuse emission components are included as are new discoveries at gamma rays and TeV energies IAU S230 is a valuable resource for astronomers and graduates working in high energy astrophysics **Cosmic Dust, Its Impact on Astronomy**

Scientific and Technical Information Branch,1985 **Bibliography of Agriculture** ,1976 Energy Research Abstracts ,1987 Predators with Pouches Menna Jones,Mike Archer,Chris Dickman,2003-04-30 Predators with Pouches provides a unique synthesis of current knowledge of the world s carnivorous marsupials from Patagonia to New Guinea and North America to Tasmania Written by 63 experts in each field the book covers a comprehensive range of disciplines including evolution and systematics reproductive biology physiology ecology behaviour and conservation Predators with Pouches reveals the relationships between the American didelphids and the Australian dasyurids and explores the role of the marsupial fauna in the mammal community It introduces the geologically oldest marsupials from the Americas and examines the fall from former diversity of the larger marsupial

carnivores and their convergent evolution with placental forms The book covers all aspects of carnivorous marsupials including interesting features of life history their unique reproduction the physiological basis for early senescence in semelparous dasyurids sex ratio variation and juvenile dispersal It looks at gradients in nutrition from omnivory to insectivory to carnivory as well as distributional ecology social structure and conservation dilemmas **Gravitational**

N-Body Simulations Sverre J. Aarseth, 2003-10-23 This book discusses in detail all the relevant numerical methods for the classical N body problem It demonstrates how to develop clear and elegant algorithms for models of gravitational systems and explains the fundamental mathematical tools needed to describe the dynamics of a large number of mutually attractive particles Particular attention is given to the techniques needed to model astrophysical phenomena such as close encounters and the dynamics of black hole binaries The author reviews relevant work in the field and covers applications to the problems of planetary formation and star cluster dynamics both of Pleiades type and globular clusters Self contained and pedagogical this book is suitable for graduate students and researchers in theoretical physics astronomy and cosmology The Exoplanet Handbook Michael Perryman, 2018-08-30 With the discovery of planets beyond our solar system 25 years ago exoplanet research has expanded dramatically with new state of the art ground based and space based missions dedicated to their discovery and characterisation With more than 3 500 exoplanets now known the complexity of the discovery techniques observations and physical characterisation have grown exponentially This Handbook ties all these avenues of research together across a broad range of exoplanet science Planet formation exoplanet interiors and atmospheres and habitability are discussed providing in depth coverage of our knowledge to date Comprehensively updated from the first edition it includes instrumental and observational developments in depth treatment of the new Kepler mission results and hot Jupiter atmospheric studies and major updates on models of exoplanet formation With extensive references to the research literature and appendices covering all individual exoplanet discoveries it is a valuable reference to this exciting field for both incoming and established researchers *Evolution* Monroe W.
