*Econometric Models of Asian Link* Shinichi Ichimura, Mitsuo Ezaki, 2012-12-06 This is the first outcome of our effort in ASIAN LINK PROJECT to construct the econometric models of Asian developing countries and analyze their inter dependence with major trading partners the United States and Japan The model we present here is called Asian Link System The countries in this system include Korea Taiwan Hong Kong China the Philippines Thailand Malaysia Singapore Indonesia Japan and the United States They are covered by national models The rest of the world is divided into several regions and treated by simple prototype models The main characteristics of Asian Link System are to deal with the inter dependent relations between Asian developing countries on the one hand and Japan and United States on the other hand Here are presented these national models and the Asian Link System with the underlying statistical data so that any econometrician can re estimate our models and check the results of our research work Nowadays most articles and books in econometrics report only the final results or conclusions of research so that no other econometrician can re calculate or re examine the findings This is very serious in the empirical research because as theorists may make mistakes positive economists do commit errors or miss some possible considerations Unless statistical data are offered other econometricians cannot make suggestions or improve the models This is the main reason why empirical research in econometrics or applied econometrics are not making substantial progress in recent years

**China's Rural Labor Migration And Its Economic Development** Xiaoguang Liu, 2020-04-22 The continuous migration of rural labor to cities has changed the fundamental characteristics of China's labor market, profoundly affected the country's investments, savings, technological progress and economic cycle fluctuation and more importantly the rapid development of non agricultural industries. Though the significant changes in China's labor market has played a vital role in the country's economic growth it has not been duly valued and studied. This book aims to fill the gap by studying the role of rural labor in China's economic development. The book systematically presents the three most important characteristics of China's economic development and summarizes them as the riddle of China's rising return on capital, the riddle of China's rising rate of saving and the riddle of Okun's law not applicable to China. It empirically and theoretically analyses the three riddles from the perspective of the migration of rural labor. It also proposes macro policies and developmental strategies to address the three riddles.

*China's Grain Economy* Liming Wang, John Davis, 2019-06-03 This book was originally published in 2000. China is the largest developing

country in the world and is still heavily based on agriculture. Currently about 70 per cent of China's total of more than one billion people live in rural areas and about half of the total national labour force is involved in agricultural activities. It is clear that agriculture is the foundation for the development of the Chinese national economy. Within agriculture the grain economy is the most important sector; indeed it has been recognised as a treasure in managing the country by all past Chinese dynasties. Ensuring enough grain supply to meet the demands of such a huge population seems to be a long term goal for the Chinese government and this book explores whether China will be able to produce enough grain to keep pace with its population increases.

China's Economic Gene Mutations Zhaoguang Hu, Jian Zhang, Ning Zhang, 2015-07-30. The book focuses on low carbon issues and China's economy which is analyzed from the perspective of electricity economics. It proposes the novel concept of an economic gene to reflect certain characteristics of the economy. The gene mapping of China's economy has been studied based on production functions with electricity. Economic mutations have also been studied with the aim of diagnosing problems in the economy. Two such mutations have occurred in China since 1978, the most recent being in 2012 and no further mutation is expected until 2025. The book describes the inherent quality of China's economy from 2012 to 2025 and how mechanism reforms would greatly improve marginal representative factor productivity in this period. The agents response equilibrium ARE approach to simulate national economy based on multi agent technology is proposed. Another cornerstone of the model is the input output table. Simulated input output tables from 2011 to 2025 are provided in the book. This book provides recommendations for policy makers and advisors and is a valuable resource for researchers in the fields of economics, public policies, low carbon development, electricity and energy. It also provides insights into China's economic development.

China has quickly moved into a critical point in the sense that its past performance in economic growth and development has created so many unsolved problems and for such problems to be addressed a better understanding of these problems and a clear policy framework are required for policy

makers to conduct reforms Based on high level empirical research on China's economic development by each of the contributors this edited book provides an in depth and clear analysis of many of important issues facing China's move to new phase of economic development and transformation and discusses policy issues involved in further reforms     The Uniqueness of China's Development Model Kwok-wah Yip, 2012 The book discusses the development model of China which has now overtaken Japan as the world's second largest economy This remarkable economic achievement has not followed the Western world's favorite developmental tools of freedom democracy and a market driven economy but rather China's unique model of one party authoritarian rule with a mixed economy The Middle Kingdom's way of development has largely questioned the West's core values of freedom and democracy The book argues that the model is based on the country's 3 000 year old civilization forged by the efforts innovations trial and error process of several recent generations and guided by the Chinese Communist Party in the past 60 years
