Vocational education and training VET can be difficult to define since it is set in a turbulent and volatile environment marked by national and regional specificities It can be delivered at different levels and by a variety of providers including community colleges colleges of further education polytechnics and universities as well as importantly private providers This collection reflects the shifting and often messy conceptualisations of VET On one level VET can be associated with the education and training of craft skilled workers or of those who are being prepared for a particular occupational destiny and specific position in the labour market In this instance notions of skill knowledge and dispositions are significant On another level it can raise questions over power and class formation in addition to the way in which these are mediated or intersect with race and gender Moreover there are important political questions addressing the significance of VET in furthering social cohesion and economic regeneration in times of austerity when neoliberalism is hegemonic The chapters in this book are not all of a piece but each in its turn raises important questions about VET its relationship to the economy as well as its global setting This book was originally published as a special issue of *Globalisation Societies and Education* **Geographies of Labour Market Inequality** Ron Martin, Philip S. New Money, Nice Town

Leonard Nevarez, 2014-01-14 The economic restructuring that has gone on since the 1980s has produced a new economic

space in which service and high tech firms are at the forefront of innovation One of the features of the new economy is what pop geographer Joel Kotkin calls nerdistans or smaller cities with a substantial high tech sector limits on growth environmentally friendly policies and a generally well educated population In *New Money Nice Town* Leonard Nevarez takes a close look at how new economy firms in quality of life cities interact with local political structures finding that they are both more liberal and more detached than their traditional counterparts This new global economy has created communities whose politics are more democratic but also more tenuous and unstable *Economy* Ron Martin,2017-11-30

Economic geographers have always argued that space is key to understanding the economy that the processes of economic growth and development do not occur uniformly across geographic space but rather differ in degree and form as between different nations regions cities and localities with major implications for the geographies of wealth and welfare This was true in the industrial phase of global capitalism and is no less true in the contemporary era of post industrial knowledge driven global capitalism Indeed the marked changes occurring in the structure and operation of the economy in the sources of wealth creation in the organisation of the firm in the nature of work in the boundaries between market and state and in the regulation of the socio economy have stimulated an unprecedented wave of theoretical conceptual and empirical enquiry by economic geographers Even economists who traditionally have viewed the economy in non spatial terms as existing on the head of the proverbial pin are increasingly recognising the importance of space place and location to understanding economic growth technological innovation competitiveness and globalisation This collection of previously published work though containing but a fraction of the huge explosion in research and publication that has occurred over the past two decades seeks to convey a sense of this exciting phase in the intellectual development of the discipline and its importance in grasping the spatialities of contemporary economic life

Knowledge, Space, Economy John

Bryson, Peter Daniels, Nick Henry, Jane Pollard, 2002-01-04 We are now living through a period of knowledge capitalism in which as Castells put it the action of knowledge upon knowledge is the main source of productivity In the face of such transformation the economic social and institutional contours of contemporary capitalism are being reshaped At the heart of this world are an emergent set of economies regions institutions and peoples central of the flows and translations of knowledge This book provides an interdisciplinary review of the triad of knowledge space economy on entering the twenty first century Drawing on a variety of disciplinary backgrounds the first part of the book comprises a set of statements by leading authors on the role of knowledge in capitalism Thereafter the remaining two parts of the book explore the landscape of knowledge capitalism through a series of analyses of knowledge in action within a range of economic political and cultural contexts Bringing together a set of authors from across the social sciences this book provides both a major theoretical statement on understanding the economic world and an empirical exemplification of the power of knowledge in shaping the spaces and places of today s society

Manokha, 2008-05-30 This book examines humanitarian interventions in the post Cold War era in the context of the development of global capitalism It argues that it is often our duty to use force to uphold human rights but that attempts to promote and protect these rights can unintentionally contribute to the perpetuation of poverty and poverty related problems

Alternative Capitalisms: Geographies of Emerging Regions Robert Gwynne, Denis Shaw, Thomas Klak, 2014-05-12 This book aims to examine the effects of globalization and economic and political transformations in those parts of the world which are now regularly referred to as emerging regions These are Latin America and the Caribbean East Central Europe and the former Soviet Union and East Asia This book breaks new ground in three areas First of all it develops a critique of the use of the term emerging regions for geographers and social scientists and relates this to world systems theory Secondly it explores the development trajectories and challenges of countries in this so called emerging world countries that will be crucial to the evolution of the world economy in the twenty first century Thirdly it compares and contrasts the pathways of both economic and political change in the three world regions under focus This is a unique approach in terms of books published in both geography and the social sciences Within the context of the three world regions the book combines historical and contemporary analysis of the evolving world system In these regions we are concerned to understand the historical expansion and extension of capitalism and how its contemporary forms of production exchange and regulation are evolving The authors believe that at the present time these processes have produced alternative capitalisms economic and associated developments which while assuredly capitalist differ in various ways from those typical of the capitalist West or core economies of North America and Western Europe
