Ecology and Management of Central Hardwood Forests Ray R. Hicks, 1998-11-16 A comprehensive guide to effective hardwood forest management Extending 235 000 square miles from New York to Georgia and from Virginia to Missouri the Central Hardwoods Region harbors the most extensive concentration of deciduous hardwoods in the world As harvests in the Pacific Northwest decline and timber prices rise the maturing stands of mixed species in this central U S region are a rich and valuable resource that is increasingly vulnerable to exploitation This timely book examines all of the key ecological social and economic management considerations essential to utilize and sustain these vital woodlands effectively First it develops the background necessary to understand what makes the hardwood eco system function with a thorough examination of the physiography geology soils and climate of the region and a historical overview of its evolution and development from pre European settlement to the present Then species by species the book details the silvical characteristics of 34 important tree species Next it offers expert recommendations for effective forest treatment and management from specific concerns such as timber production pollution and financial planning to broader issues including the role of the natural resource manager and the biological potential of the entire region Generously supplemented with graphs and photos *Ecology and Management of Central Hardwood Forests* is important reading for foresters natural resource managers regional planners environmental scientists governmental officials everyone with a stake in the future of this critical living resource

Sustaining Young Forest Communities Cathryn Greenberg, Beverly Collins, Frank Thompson III, 2011-08-03 This edited volume addresses a rising concern among natural resource scientists and management professionals about decline of the many plant and animal species associated with early successional habitats especially within the Central Hardwood Region of the USA These open habitats with herbaceous shrub or young forest cover are disappearing as abandoned farmland pastures and cleared forest patches return to forest There are many questions about why what where and how to manage for early successional habitats In this book expert scientists and experienced land managers synthesize knowledge and original scientific work to address questions on such topics as wildlife water carbon sequestration natural versus managed disturbance future scenarios and sustainable creation and management of early successional habitat in a landscape context

Greenberg, Beverly S. Collins, 2015-10-26 This book discusses the historic range of variation HRV in the types frequencies severities and scales of natural disturbances and explores how they create heterogeneous structure within upland hardwood forests of the Central Hardwood Region CHR The book was written in response to a 2012 forest planning rule which requires that national forests to be managed to sustain ecological integrity and within the natural range of variation of natural disturbances and vegetation structure Synthesizing information on HRV of natural disturbance types and their impacts on forest structure has been identified as a top need
