## **Econometric Modeling In Economic Education Research:**

Econometric Modeling in Economic Education Research William E. Becker Jr., Rolf A. Walstad, 2012-12-06 Since its establishment in the 1950s the American Economic Association's Committee on Economic Education has sought to promote improved instruction in economics and to facilitate this objective by stimulating research on the teaching of economics. These efforts are most apparent in the sessions on economic education that the Committee organizes at the Association's annual meetings. At these sessions economists interested in economic education have opportunities to present new ideas on teaching and research and also to report the findings of their research. The record of this activity can be found in the Proceedings of the American Economic Review. The Committee on Economic Education and its members have been actively involved in a variety of other projects. In the early 1960s it organized the National Task Force on Economic Education that spurred the development of economics teaching at the precollege level. This in turn led to the development of a standardized research instrument, a high school test of economic understanding. This was followed later in the 1960s by the preparation of a similar test of understanding college economics. The development of these two instruments greatly facilitated research on the impact of economics instruction, opened the way for application of increasingly sophisticated statistical methods in measuring the impact of economic education, and initiated a steady stream of research papers on a subject that previously had not been explored.

**An International Perspective on Economic Education** William B. Walstad, 2012-12-06 Economics is taught in some form in the secondary schools of nations throughout the world. The subject is rarely taught in elementary schools, and while economics courses are offered in universities, the majority of students end their formal education with secondary school. Thus the best opportunity for the economic education of the youth of a nation occurs in secondary schools. This book examines economic education at this critical level of the educational system. The teaching of economics in secondary schools varies across countries. These differences occur because of history, the structure of education, and other national factors. At the same time, there are common elements in the economic education of many countries, especially in content coverage. This contrast between the common features and the uniqueness of economic education in secondary schools of major industrial nations exemplifies the international perspective presented in this book. The international perspective is developed in the six sections of the volume. The first section discusses why nations should include economics in school curricula and presents a framework for teaching economics that should have global appeal. Dissension and consensus on economic issues among North American and European economists are examined in the second section. The third section surveys the U.S. research literature on precollege economic education and assesses the current state of economics instruction in U.S. schools. The economics curricula and educational practices in seven other nations—the U.K., Canada, Japan, Germany, Austria, Korea, and Australia—are described in the fourth and fifth sections. The fifth section also presents international comparisons of economic understanding based on national testing in six of those nations. The sixth and final section explores the role of economic

education in centrally planned economies and its effects on the transition to a market economy using Russia Bulgaria and China as case studies

*The Economics of American Higher Education* William E. Becker Jr., D.R. Lewis, 2012-12-06 Postsecondary educational institutions in the United States are facing increasing financial stress and waning public support Unless these trends can be changed higher education can be expected to stagnate What if anything can be done As a starting point advocates of higher education need to more fully recognize the issues associated with the economic mission of higher education and how this mission gets translated into individual student gains regional growth and social equity This requires an understanding of the relationship between the outcomes of higher education and measures of economic productivity and well being This volume addresses topics related to the role of postsecondary education in microeconomic development within the United States Attention is given to the importance of colleges and universities in the enhancement of individual students and in the advancement of the communities and states within which they work Although several of the chapters in this

volume are aimed at research teaching universities much of what is presented throughout can be generalized to all of postsecondary education Little attention however is given to the role of higher education in the macroeconomic development of the United States this topic is covered in our related book American Higher Education and National Growth **Higher Education: Handbook of Theory and Research** J.C. Smart,2012-12-06 Reforming Economics and Economics Teaching in the Transition Economies Michael Watts,William B. Walstad,2002-01-01 The volume is of greatest interest to those pursuing issues of the implementation of economics education and its impact at an elementary level on economic understanding and attitudes Through generally careful statistical analysis it shows what can be done even in a most difficult environment as well as the constraints on change imposed by Soviet legacies It is a valuable addition to the literature on economics pedagogy Richard E Ericson Slavic Review This comprehensive and impressive volume presents the first book length multi country investigation of reform of economic education in transition economies Authors from the West and from transition economies describe the major changes in economics content and instruction that occurred in schools and universities throughout nations in Eastern and Central Europe and the former Soviet Union from 1989 to 2000 *Economic Education* United States. Congress. Joint Economic Committee. Subcommittee on Economic Progress,1967 *The Economics of American Universities* Stephen A. Hoenack,1990-01-01 This book discusses the adjustment of universities to the changing financial environment Its authors analyze the relationship between higher education inputs and outputs assess the available information about the determinants of university costs survey the influence of market conditions and pricing strategies on students demands for attendance at institutions of higher education summarize research on the objectives for institutions of higher education held by different participants and funders analyze how universities determine their priorities and relative funding for different activities and disciplines and explore the economics of universities research functions In addition the book addresses three questions regarding the external fiscal environment facing American universities What are the recent and emerging changes in the key economic variables affecting these institutions What mechanisms have universities used in the past to cope with tighter financial constraints What are the implications for university research activities as these institutions adjust to their fiscal constraints The Journal of Economic Education ,1990 *Actas de las V Jornadas de la Asociación de la Economía de la Educación* Asociación de Economía de la Educación. **Measuring Water Quality Benefits** V. Kerry Smith,William H. Desvousges,2012-12-06 Almost 5 years ago we began working together on research for the U S Environmental Protection Agency EPA to measure the benefits of water quality regulations EPA had awarded a contract to Research Triangle Institute RTI in response to a proposal that Bill wrote on measuring these benefits After meeting with the EPA project officer Dr Ann Fisher the basic outlines of what would become this research were framed Upon the suggestion of Bob Anderson then chief of the Benefits Branch at EPA we selected the Monongahela River as the focal point of a case study that would compare alternative benefit measurement approaches

Exactly how this case study would be done remained vague but Ann urged that there be a survey and that nonuse benefits be included in the question naire design Of course Bill agreed At the same time Kerry was independently working on a review article that tied together some of the loose threads in the option value literature He had also been thinking about how to measure option value as well as working on ways to generalize the travel cost approach for estimating benefits of site attributes Glenn Morris at RTI suggested that Bill have lunch with him and Kerry and that they could talk about Bill s research to see if there were any mutual interest Over the lunch and Bill s ever present dessert in a Chapel Hill restaurant we found out just how much we have in common
