Nanoporous Materials Dusan Losic, Abel Santos, 2015-07-18 This book provides in depth knowledge about the fabrications structures properties and applications of three outstanding electrochemically engineered nanoporous materials including porous silicon nanoporous alumina and nanotubular titania The book integrates three major themes describing these materials The first theme is on porous silicon reviewing the methods for preparation by electrochemical etching properties and methods for surface functionalization relevant for biosensing applications Biomedical applications of porous silicon are major focus described in several chapters reviewing recent developments on bioanalysis emerging capture probes and drug delivery The second theme on nanoporous alumina starts with describing the concept of self organized electrochemical process used for synthesis nanopore and nanotube structures of valve metal oxides and reviewing recent development and progress on this field The following chapters are focused mainly on optical properties and biosensing application of nanoporous alumina providing the reader with the depth of understanding of the structure controlled optical and photonic properties and design of optical biosensing devices using different detection principles such as photoluminescence surface plasmon resonance reflective spectrometry wave guiding Raman scattering etc The third theme is focused on nanotubular titania reviewing three key applications including photocatalysis solar cells and drug delivery The book represents an important resource for academics researchers industry professionals post graduate and high level undergraduate students providing them with both an overview of the current state of the art on these materials and their future developments

Functional Nanocomposites and Their Applications Dhanya K. R., Sanal P. S., Sabu Thomas, Nandakumar Kalarikkal, 2024-09-06 This book *Functional Nanocomposites and Their Applications* explains innovative developments in nanocomposites It covers novel findings and various applications of nanocomposites in different emerging fields Chapters cover several types of nanocomposites as well as their synthesis manufacturing characteristics and applications Special emphasis is given to innovative works on functional nanocomposites and their relevant areas of use The authors depict the stability and functionality of nanocomposites and their applications in various sectors such as industrial structural biomedical etc Nanocomposites in wastewater treatment MnO₂ and graphene nanostructures computer modeling of structure and

mechanical behavior polythiophene nanocomposites and other topics are covered in the chapters Nanocomposites have a high surface to volume ratio and hence have strong mechanical characteristics making them suitable for application in the automotive and construction sectors Nanocomposites show better property enhancement over conventional composites i.e. properties such as electrical thermal mechanical and barrier They have good transparency and also reduce the property of flammability Other uses include power tool housing electronic covers and so forth This book will help readers easily understand the effective implementation of different types of nanocomposites such as for environmental remediation biomedical applications lightweight designed goods with better mechanical thermal or chemical resistance qualities etc This book will be valuable for scientists and engineers both in academics and industry Single Quantum Dots Peter Michler, 2003-12-09 Special focus is given to the optical and electronic properties of single quantum dots due to their potential applications in devices operating with single electrons and or single photons This includes quantum dots in electric and magnetic fields cavity quantum electrodynamics nonclassical light generation and coherent optical control of excitons

Surface Modification to Improve Properties of Materials Miran Mozetič, 2019-04-16 This book contains selected contributions on surface modification to improve the properties of solid materials The surface properties are tailored either by functionalization etching or deposition of a thin coating Functionalization is achieved by a brief treatment with non equilibrium gaseous plasma containing suitable radicals that interact chemically with the material surface and thus enable the formation of rather stable functional groups Etching is performed in order to modify the surface morphology The etching parameters are selected in such a way that a rich morphology of the surfaces is achieved spontaneously on the sub micrometer scale without using masks The combination of adequate surface morphology and functionalization of materials leads to superior surface properties which are particularly beneficial for the desired response upon incubation with biological matter Alternatively the materials are coated with a suitable thin film that is useful in various applications from food to aerospace industries
