**Frontinus' Legacy** ,2001      **Frontinus and the Curae of the Curator Aquarum** Michael Peachin,2004 The De aquis of Sextus Julius Frontinus is usually interpreted as either an administrative guide for the curator aquarum or as a work of praise It can be demonstrated however that Frontinus had another goal in writing The book is more likely what we would call a political pamphlet explaining a particular administrative reform and encouraging those affected by that reform to cooperate with it Frontinus wants to be sure that all concessions of aqueduct water to private individuals be made as proper grants by the emperor In short this curator aquarum is interested in regulating the flow of a particular beneficium namely aqueduct water from the emperor to his elite subjects      *Frontinus' Legacy* Deane R. **The Power of Urban Water** Nicola Chiarenza, Annette Haug, Ulrich Müller, 2020-05-05

Water is a global resource for modern societies and water was a global resource for pre modern societies The many different water systems serving processes of urbanisation and urban life in ancient times and the Middle Ages have hardly been researched until now The numerous contributions to this volume pose questions such as what the basic cultural significance of water was the power of water in the town and for the town from different points of view Symbolic aesthetic and cultural aspects are taken up as is the role of water in politics society and economy in daily life but also in processes of urban planning or in urban neighbourhoods Not least the dangers of polluted water or of flooding presented a challenge to urban society The contributions in this volume draw attention to the complex manifold relations between water and human beings This collection presents the results of an international conference in Kiel in 2018 It is directed towards both scholars in

ancient and mediaeval studies and all those interested in the diversity of water systems in urban space in ancient and mediaeval times      **Water Engineering and Management through Time** Enrique Cabrera,2010-08-06 Water Engineering and Management Learning from History explores the pair technology water use an indivisible pair since the first member of the binomial determines the second which in the light of the knowledge available in the 21st century and with a conception focused on the near future goes beyond the limits set by nature itself T      Why America Is Not a New Rome Vaclav Smil,2010-01-29 An investigation of the America Rome analogy that goes deeper than the facile comparisons made on talk shows and in glossy magazine articles America s post Cold War strategic dominance and its pre recession affluence inspired pundits to make celebratory comparisons to ancient Rome at its most powerful Now with America no longer perceived as invulnerable engaged in protracted fighting in Iraq and Afghanistan and suffering the worst economic downturn since the Great Depression comparisons are to the bloated decadent ineffectual later Empire In Why America Is Not a New Rome Vaclav Smil looks at these comparisons in detail going deeper than the facile analogy making of talk shows and glossy magazine articles He finds profound differences Smil a scientist and a lifelong student of Roman history focuses on several fundamental concerns the very meaning of empire the actual extent and nature of Roman and American power the role of knowledge and innovation and demographic and economic basics population dynamics illness death wealth and misery America is not a latter day Rome Smil finds and we need to understand this in order to look ahead without the burden of counterproductive analogies Superficial similarities do not imply long term political demographic or economic outcomes identical to Rome s      *Environmental History of Water* Petri S. Juuti,Tapio Katko,H. Vuorinen,2007-02-01 The World Water Development Report 2003 pointed out the extensive problem that Sadly the tragedy of the water crisis is not simply a result of lack of water but is essentially one of poor water governance Cross sectional and historical intra national and international comparisons have been recognized as a valuable method of study in different sectors of human life including technologies and governance Environmental History of Water fills this gap with its main focus being on water and sanitation services and their evolution Altogether 34 authors have written 30 chapters for this multidisciplinary book which divides into four chronological parts from ancient cultures to the challenges of the 21st century each with its introduction and conclusions written by the editors The authors represent such disciplines as history of technology history of public health public policy development studies sociology engineering and management sciences This book emphasizes that the history of water and sanitation services is strongly linked to current water management and policy issues as well as future implications Geographically the book consists of local cases from all inhabited continents The key penetrating themes of the book include especially population growth health water consumption technological choices and governance There is great need for general long term analysis at the global level Lessons learned from earlier societies help us to understand the present crisis and challenges This new book Environmental History of Water provides this analysis by studying these lessons      Research
