food processing technology and opens the door to nearly fresh products that retain their sensorial and nutritional qualities. High Pressure Processing of Fruit and Vegetable Products reviews and summarizes the latest advances in novel high pressure processing techniques for preserving fruits, fruit juices and their mixtures. It contains basic information on the relation of high process treatment parameters with the safety and quality of fruit and vegetable juices products. The book focuses on product quality parameters, nutritional value, bio active health components and microbial safety and stability. The main aim of this book is to summarize the advances in the utilization of modern high pressure pasteurization (HPP) treatment to preserve and stabilize fruit and vegetable products. HPP technology is related to the product quality parameters, the content of nutritional and health active components and the microbial safety and subsequent shelf life. One chapter of this book is devoted to industrial equipment available; other chapters deal with examples of commercial fruit and vegetable products. Another chapter of this book is dedicated to packaging as packaging of food before HPP is mandatory in this technology. The regulatory aspects for high pressure treated fruit and vegetable products in different regions of the world (Europe, the United States, Asia and Australia) are also an important topic dealt within one chapter of the book. The effects of HPP technology on the quality of fruit and vegetable products, namely nutrients and stability, health active components and sensory aspects are reviewed in a trio of chapters.

Commercial Fruit Processing Jasper Woodroof, 2012-12-06. Use of fewer additives containing sodium, spices, artificial colors and flavors and energy continued use of fruits in cereals, salads, cakes, pies and other combinations as a source of minerals, vitamins, fiber and natural flavors and colors. An important recent innovation is low moisture processing in which fruit with no added sugar, preservative or carrier is converted into convenient dehydrated forms. Development of this technology has been stimulated by high transportation rates, improvements in technology and revolutionary new packages. In addition to raisins, prunes and dehydrated apples, pears, peaches and apricots, bananas are available in flakes, slices and granules. Pineapple and other tropical fruits also are available in new forms. Another low moisture product is apple fiber solids consisting of cell wall material, cellulose, hemicellulose, lignin and pectin and apple sugars. Low moisture forms of other fruits are becoming more common.

Commercial Fruit Processing is a companion volume to Commercial Vegetable Processing also edited by B. S. Luh and J. G. Woodroof; both are being updated and revised simultaneously. Grateful acknowledgments and thanks go to contributors who wrote in their own area of expertise on commercial fruit processing. Credit also goes to more than a dozen commercial companies and individuals who supplied photographs, charts, tables and data from commercial operations. Thanks also to Ann Autry who typed, corrected and edited the manuscript and to Naomi C. Woodroof my wife for assisting in research.

Compendium of the Microbiological Spoilage of Foods and Beverages William H. Sperber,Michael P. Doyle,2009-09-23 The increased emphasis on food safety during the past two decades has decreased the emphasis on the loss of food through spoilage particularly in developed countries where food is more abundant In these countries spoilage is a commercial issue that affects the profit or loss of producers and manufacturers In lesser developed countries spoilage continues to be a major concern The amount of food lost to spoilage is not known As will be evident in this text stability and

the type of spoilage are influenced by the inherent properties of the food and many other factors. During the Second World War, a major effort was given to developing the technologies needed to ship foods to different regions of the world without spoilage. The food was essential to the military and to populations in countries that could not provide for themselves. Since then, progress has been made in improved product formulations, processing, packaging, and distribution systems. New products have continued to evolve, but for many new perishable foods, product stability continues to be a limiting factor. Many new products have failed to reach the marketplace because of spoilage issues.
