Fully Nonlinear Elliptic Equations:

Fully Nonlinear Elliptic Equations Luis A. Caffarelli, Xavier Cabré, 1995 The goal of the book is to extend classical regularity theorems for solutions of linear elliptic partial differential equations to the context of fully nonlinear elliptic equations This class of equations often arises in control theory optimization and other applications The authors give a detailed presentation of all the necessary techniques Instead of treating these techniques in their greatest generality they outline the key ideas and prove the results needed for developing the subsequent theory Topics discussed in the book include the theory of viscosity solutions for nonlinear equations the Alexandroff estimate and Krylov Safonov Harnack type inequality for viscosity solutions uniqueness theory for viscosity solutions Evans and Krylov regularity theory for convex fully nonlinear equations and regularity theory for fully nonlinear equations with variable coefficients $L_p(\cdot)$, $\Lambda(\cdot)$ *Regularity for Fully Nonlinear Elliptic Equations*, 2017 A Survey on the Book "Fully Nonlinear Elliptic Equations" By Luis. A. Caffarelli and Xavier Cabré, 2014

Potential Theory for Fully Nonlinear Elliptic Equations Denis A. Labutin, 1999 **Some Maximum Principles and Continuity Estimates for Fully Nonlinear Elliptic Equations of Second Order** Ping-kan Fok, 1996 **Nonlinear Elliptic Equations and Nonassociative Algebras** Nikolai Nadirashvili, Vladimir Tkachev, Serge Vlăduț, 2014-12-03 This book presents applications of noncommutative and nonassociative algebras to constructing unusual nonclassical and singular solutions to fully nonlinear elliptic partial differential equations of second order The methods described in the book are used to solve a longstanding problem of the existence of truly weak nonsmooth viscosity solutions Moreover the authors provide an almost complete description of homogeneous solutions to fully nonlinear elliptic equations It is shown that even in the very restricted setting of Hessian equations depending only on the eigenvalues of the Hessian these equations admit homogeneous solutions of all orders compatible with known regularity for viscosity solutions provided the space dimension is five or larger To the contrary in dimension four or less the situation is completely different and our results suggest strongly that there are no nonclassical homogeneous solutions at all in dimensions three and four Thus this book gives a complete list of dimensions where nonclassical homogeneous solutions to fully nonlinear uniformly elliptic equations do exist this should be compared with the situation of say ten years ago when the very existence of nonclassical viscosity solutions was not known Sobolev and Viscosity Solutions for Fully Nonlinear Elliptic and Parabolic Equations N. V. Krylov, 2018-09-07 This book concentrates on first boundary value problems for fully nonlinear second order uniformly elliptic and parabolic equations with discontinuous coefficients We look for solutions in Sobolev classes local or global or for viscosity solutions Most of the auxiliary results such as Aleksandrov's elliptic and parabolic estimates the Krylov Safonov and the Evans Krylov theorems are taken from old sources and the main results were obtained in the last few years Presentation of these results is based on a generalization of the Fefferman Stein theorem on Fang Hua Lin's like estimates and on the so called ersatz

existence theorems saying that one can slightly modify any equation and get a cut off equation that has solutions with bounded derivatives These theorems allow us to prove the solvability in Sobolev classes for equations that are quite far from the ones which are convex or concave with respect to the Hessians of the unknown functions In studying viscosity solutions these theorems also allow us to deal with classical approximating solutions thus avoiding sometimes heavy constructions from the usual theory of viscosity solutions

Regularity of Solutions of Fully Nonlinear Elliptic Equations Neil Sydney Trudinger,1983 *Nonlinear Elliptic Equations of the Second Order* Qing Han,2016-04-15 Nonlinear elliptic differential equations are a diverse subject with important applications to the physical and social sciences and engineering They also arise naturally in geometry In particular much of the progress in the area in the twentieth century was driven by geometric applications from the Bernstein problem to the existence of Kähler Einstein metrics This book designed as a textbook provides a detailed discussion of the Dirichlet problems for quasilinear and fully nonlinear elliptic differential equations of the second order with an emphasis on mean curvature equations and on Monge Ampère equations It gives a user friendly introduction to the theory of nonlinear elliptic equations with special attention given to basic results and the most important techniques Rather than presenting the topics in their full generality the book aims at providing self contained clear and elementary proofs for results in important special cases This book will serve as a valuable resource for graduate students or anyone interested in this subject

On Degenerate Fully Nonlinear Elliptic Equations in Balls Neil Sydney Trudinger,1986 **On Quantitative Hessian Estimates for Fully Nonlinear Elliptic Equations** Thialita Moura Do Nascimento,2023 A fundamental issue in the theory of fully nonlinear elliptic equations is to establish quantitative possibly sharp Hessian integrability of their solutions The problem is particularly relevant both from pure and applied viewpoints for models involving a very large number of independent variables arising from fields such as financial engineering machine learning and deep learning among others In this dissertation work we establish new improved universal bounds for the Hessian integrability exponent of viscosity super solutions to fully nonlinear elliptic PDEs Such estimates yield a substantial quantitative improvement on the decay of this exponent with respect to the dimension of the model In particular we solve in the negative the Armstrong Silvestre Smart Conjecture on the optimal Hessian integrability exponent for n greater or equal than 3 The flatland case $n = 2$ is a bit more involved as the maximum exponent is known to be sharp In this case we show that the best universal Hessian integrability exponent remains at least 81.45% of the theoretical maximum uniformly as the ellipticity ratio goes to zero
