Functional Morphology of Feeding and Grooming in Crustacea Bruce E. Felgenhauer, Anne. B Thistle, L. Watling, 2020-08-27 Abetted by recent technological advances in scanning and transmission electron microscopy as well as new preparative methods these contributions examine crustacean anatomy demonstrating or at least inferring the functions of morphological features In addition to feeding and grooming they also **Functional Morphology of Feeding and Grooming in Crustacea** Bruce E. Felgenhauer, Anne. B Thistle, L. Watling, 2020-08-26 Abetted by recent technological advances in scanning and transmission electron microscopy as well as new preparative methods these contributions examine crustacean anatomy demonstrating or at least inferring the functions of morphological features In addition to feeding and grooming they also **Functional Morphology and Diversity** Les Watling, Martin Thiel, 2012-12-14 Crustaceans are increasingly used as model organisms in all fields of biology including neurobiology developmental biology animal physiology evolutionary ecology biogeography and resource management One reason for the increasing use of crustacean examples is the wide range of phenotypes found in this group and the diversity of environments they inhabit few other taxa exhibit such a variety of body shapes and adaptations to particular habitats and environmental conditions A good overview of their functional morphology is essential to understanding many aspects of their biology This volume is the first in The Natural History of Crustacea series a ten volume series that will treat all aspects of crustacean biology physiology behavior and evolution The series updates and synthesizes a growing wealth of information on the natural history of this remarkable group Functional Morphology and Diversity explores the functional morphology of crustaceans which cover the main body parts and systems The book brings together a group of internationally recognized and up and coming experts in fields related to systematics and morphology Contributing authors study a range of crustacean taxa and topics and thus the volume provides a compact overview of the great phenotypic diversity and their function found among crustaceans The first broad treatment of Crustacea in decades the book will be invaluable for researchers and students in this and related fields **Crustaceans and the Biodiversity Crisis** Frederick Schram, Carel von Vaupel Klein, 2023-07-03 This important and extensive volume presents part of the Proceedings of the Fourth International Crustacean Congress held in Amsterdam in 1998 As the title implies Crustaceans and the Biodiversity Crisis was the general underlying theme of all contributions at the congress With the turn of the century someone ought to assess the balance of our natural environment and of the various branches of biology that study its rapidly declining diversity From the five subthemes covered at the conference those of 1 Diversity in Time and Space including Systematics Phylogeny and Palaeontology 2b Biogeography 3c Larvae and 4 Physiology and Biochemistry including Molecular Biology and Genetics are represented in this volume along with a few contributions from other subthemes e g 2a Invasive Crustacea 3a Ecology 3b Behaviour and 5 Fisheries and Aquaculture The book is primarily meant for scientists working at institutes involved in research on the group Crustacea marine freshwater or terrestrial and or

the disciplines covered Individual carcinologists working on one of the themes discussed in this volume will find a wealth of interesting and timely contributions as will other scientists working in marine or freshwater biology or in soil ecology

Evolution of Lightweight Structures Christian Hamm, 2015-06-30 This volume contains studies on the evolution and function of lightweight constructions of planktonic and other organisms and examples of how they can be used to create new solutions for radical innovations of lightweight constructions for technological application The principles and underlying processes responsible for evolution and biodiversity of marine plankton organisms are highly relevant and largely unresolved issues in the field of marine science Amongst the most promising objects for the study of evolution of stable lightweight constructions are marine organisms such as diatoms or radiolarians Research in these fields requires interdisciplinary expertises such as in evolutionary modelling paleontology lightweight optimization functional morphology and marine ecology Considerable effort and expert knowledge in production engineering or lightweight optimization is necessary to transfer knowledge on biogenic structures and evolutionary principles into new lightweight solutions This book shows methods and examples of how this can be achieved efficiently

Treatise on Zoology - Anatomy, Taxonomy, Biology.

The Crustacea, Volume 9 Part C (2 vols) Peter Castro, Peter Davie, Danièle Guinot, Frederick Schram, Carel von Vaupel Klein, 2015-11-24 This volume 9C in two parts covers the Brachyura With the publication of the ninth volume in the Treatise on Zoology The Crustacea we departed from the sequence one would normally expect Some crustacean groups mainly comprising the Decapoda never had a French version produced and the organization and production of these new chapters began independently from the preparation of the other chapters and volumes Originally envisioned to encompass volume 9 of the series it quickly became evident that the depth of material for such a volume must involve the printing of separate fascicles The new chapters have now been completed and the production of volume 9 was started while volumes 3 through 8 were and in part still are in preparation with this vol 9C I vols 1 5 have also been published and vols 6 8 are being prepared

Nervous Systems and Control of Behavior Charles Dorsett Derby, Martin Thiel, 2014 Covers all aspects of crustacean biology physiology behavior and evolution *Nervous Systems and Control of Behavior* Charles Derby, Martin Thiel, 2014-09-24 Crustacean Nervous Systems and their Control of Behavior is the third volume of the series The Natural History of the Crustacea This volume is on the functional organization of crustacean nervous systems and how those nervous systems produce behavior It complements other volumes on related topics of feeding biology reproductive biology endocrine systems and behavioral ecology There is a rich history of the study of the neurobiology of crustaceans going back over 150 years This has included studies on how their nervous systems allow them to perform behaviors that are adapted to their particular environments as well as studying them as model organisms to understand basic biomedical principles about neural function such as sensory transduction and processing synaptic transmission and integration neuromodulation and learning and memory The volume has three sections that build progressively on each other The first section is on the basic

organizational features of the crustacean nervous system and the principles upon which it is built The second section is on sensory ecology the organization of each sensory system and how it is used in intra and interspecific interactions within an ecological context The third section uses case studies of how crustacean nervous systems are organized to perform complex behaviors and interactions such as walking escape social interactions and memory and learning Taken together the 20 chapters synthesize our modern understanding of the neural control of behavior in crustaceans based on the most recent technologies in physiological recording molecular biology and computational science This volume will be useful to students and researchers as a concise summary of current knowledge of crustacean neuroscience

Ecophysiology of the European Green Crab (*Carcinus maenas*) and Related Species Dirk Weihrauch, Iain McGaw, 2023-08-18 Ecophysiology of the Green Shore Crab *Carcinus maenas* and Related Species Mechanisms Behind the Success of a Global Invader provides an in depth perspective of this devastatingly invasive coastal species During the last 175 years *Carcinus maenas* has spread around the globe by human activities Because of its ability to flourish in a wide variety of ecosystems and outcompete native species it has been listed as one of the top 100 worst global invaders Written by international experts this book focuses on *Carcinus maenas* and discusses other brachyurans with similar physiologies as comparisons including control systems and mechanisms used This book serves as a valuable resource for researchers in marine biology and invasive biology as well as for university lecturers government or environmental agencies Gathers all information on ecological physiology of this important species into one place Discusses how this one species of crab has managed to be spread around the globe and survive in many different environments Features a chapter by First Nations members on how this species may impact indigenous fisheries and culture

Remarkable Shrimps Raymond T. Bauer, 2004 In *Remarkable Shrimps* Raymond T Bauer explores the evolution natural history biological diversity and commercial importance of caridean shrimps a fascinating and colorful group of aquatic organisms that inhabit freshwater and marine environments from the tropics to the poles The biological diversity of carideans encompasses a remarkable array of adaptations in body form and function coloration breeding biology and mating behavior Carideans important grooming and antifouling adaptations are examined in detail and Bauer discusses the structural basis of their coloration the role of color change in concealment and other forms of camouflage Reproductive biology and sexual systems including hermaphroditism and sex change are reviewed and Bauer provides evidence for sex pheromones in the attraction of males to females Seasonal latitudinal and depth variation in life history patterns are also analyzed The symbiotic relationships of shrimps with invertebrates such as corals sea anemones and sea urchins and also with fishes are fascinating phenomena of marine ecosystems Different views on the ancestry and evolutionary history of carideans are evaluated as a stimulus for further work The status of caridean fisheries and aquaculture is appraised and shrimp productivity is explained in terms of life history adaptations Profiling each of the nearly thirty families of caridean shrimps Bauer writes in an informal style that is nevertheless rich with precise and useful

references Over one hundred figures and 11 plates with 70 color and half tone photographs accompany the text Extensive fieldwork is showcased in life history studies on shrimps employing both behavioral observations using time lapse video and experimental work to test hypotheses on mating strategies

Advances in Mexican Limnology: Basic and Applied Aspects Javier Alcocer, S.S.S Sarma, 2012-12-06 The present volume comprises aspects of both basic and applied limnology They include works on physical chemical and biological limnology as well as experimental approaches in selected areas Contributions from investigators regarding aquatic conservation and biodiversity were specifically not available and therefore these aspects are considered in various included works Most manuscripts deal with lentic aquatic resources This is not surprising since Mexican limnology followed the general study trend of that from temperate limnology Despite this we must emphasize that lotic resources in Mexico are quite important both locally and regionally This does not mean that rivers are not under limnological research in Mexico just that their study has only recently begun It is the intention of the volume to stimulate a larger section of limnologists to further research in this field It is to be hoped that policy framing governmental authorities in Mexico will benefit from it and consider some of the aspects described so that further damage to the epicontinental waterbodies can be halted and remedial measures can be considered in the future

Biology of the Lobster Jan Robert Factor, 1995-10-24 The widely distributed American Lobster *Homarus americanus* which inhabits coastal waters from Canada to the Carolinas is an important keystone species A valuable source of income its abundance or rarity often reflects the health of ecosystems occupied by these crustaceans This comprehensive reference brings together all that is known of these fascinating animals It will appeal to biologists zoologists aquaculturalists fishery biologists and researchers working with other lobster species as well as neurobiologists looking for more information on the model system they so often use First comprehensive book on the American lobster since Herrick's century old monograph Provides crucial background for neurobiologists who use this crustacean as a model organism Contains a comprehensive treatment of the lobster fishery and its management

Scyllaridae It covers fishing methods and regulations size and composition of catches fisheries management *Biology of the Land Crabs* Warren W. Burggren, Brian R. McMahon, 1988-04-29 Interest in land crabs has burgeoned as biologists have increasingly focused on the evolution of terrestriality Before the publication of this volume in 1988 there had been no single comprehensive source of information to serve biologists interested in the diverse aspects of terrestrial decapod crustacean Biology of the Land Crabs was the first synthesis of recent and long established findings on brachyuran and anomuran crustaceans that have evolved varying degrees of adaptation for life on land Chapters by leading researchers take a coordinated evolutionary and comparative approach to systematics and evolution ecology behaviour reproduction growth and

molting ion and water balance respiration and circulation and energetics and locomotion Each discusses how terrestrial species have become adapted from ancestral freshwater or marine forms With its extensive bibliography and comprehensive index including the natural history of nearly eighty species of brachyuran and anomuran crabs *Biology of the Land Crabs* will continue to be an invaluable reference for researchers and advanced students
