Operators and Function Theory S.C. Power,2012-12-06 In the modern study of Hilbert space operators there has been an increasingly subtle involvement with analytic function theory This is evident in the analysis of subnormal operators Toeplitz operators and Hankel operators for example On the other hand the operator theoretic viewpoint of interpolation by analytic functions is a powerful one There has been significant activity in recent years within these enriching interactions and the time seemed right for an overview ot the main lines of development The Advanced Study Institute Operators and Function Theory in Lancaster 1984 was devoted to this and this book contains ex panded versions and one contraction of the main lecture prog ramme These varied articles by prominent researchers include for example a survey of recent results on subnormal operators recent work of Soviet mathematicians on Hankel and Toeplitz operators expositions of the decomposition theory and inter polation theory for Bergman Besov and Bloch spaces with applic ations for special operators the Krein space approach to inter polation problems and much more It is hoped that these proceedings will bring all this lively mathematics to a wider audience Sincere thanks are due to the Scientific Committee of the North Atlantic Treaty Organisation for the generous support that made the institute possible and to the London Mathematical Society and the British Council for important additional support Warm thanks also go to Barry Johnson and the L M S for early guidance and to my colleague Graham Jameson for much organisational support   *Electronics Technician 3 & 2, Vol. 1* Naval Education and Training Program Development Center,1979   *Operator Theory, Function Spaces, and Applications* Tanja Eisner,Birgit Jacob,André Ran,Hans Zwart,2016-09-24 This volume collects a selected number of papers presented at the International Workshop on Operator Theory and its Applications IWOTA held in July 2014 at Vrije Universiteit in Amsterdam Main developments in the broad area of operator theory are covered with special emphasis on applications to science and engineering The volume also presents papers dedicated to the eightieth birthday of Damir Arov and to the sixty fifth birthday of Leiba Rodman both leading figures in the area of operator theory and its applications in particular to systems theory

W. Groetsch,2007 Spectral theory of bounded linear operators teams up with von Neumann s theory of unbounded operators in this monograph to provide a general framework for the study of stable methods for the evaluation of unbounded operators An introductory chapter provides numerous illustrations of unbounded linear operators that arise in various inverse problems of mathematical physics Before the general theory of stabilization methods is developed an extensive exposition of the necessary background material from the theory of operators on Hilbert space is provided Several specific stabilization methods are studied in detail with particular attention to the Tikhonov Morozov method and its iterated version   Topics in

Operator Theory Joseph A. Ball,Vladimir Bolotnikov,J. William Helton,Leiba Rodman,Ilya M. Spitkovsky,2011-02-03 This is the second volume of a collection of original and review articles on recent advances and new directions in a multifaceted and interconnected area of mathematics and its applications It encompasses many topics in theoretical developments in operator theory and its diverse applications in applied mathematics physics engineering and other disciplines The purpose is to bring in one volume many important original results of cutting edge research as well as authoritative review of recent achievements challenges and future directions in the area of operator theory and its applications **Quaternionic de Branges Spaces and Characteristic Operator Function** Daniel Alpay,Fabrizio Colombo,Irene Sabadini,2020-01-27 This work contributes to the study of quaternionic linear operators This study is a generalization of the complex case but the noncommutative setting of quaternions shows several interesting new features see e g the so called S spectrum and S resolvent operators In this work we study de Branges spaces namely the quaternionic counterparts of spaces of analytic functions in a suitable sense with some specific reproducing kernels in the unit ball of quaternions or in the half space of quaternions with positive real parts The spaces under consideration will be Hilbert or Pontryagin or Krein spaces These spaces are closely related to operator models that are also discussed The focus of this book is the notion of characteristic operator function of a bounded linear operator A with finite real part and we address several questions like the study of J contractive functions where J is self adjoint and unitary and we also treat the inverse problem namely to characterize which J contractive functions are characteristic operator functions of an operator In particular we prove the counterpart of Potapov s factorization theorem in this framework Besides other topics we consider canonical differential equations in the setting of slice hyperholomorphic functions and we define the lossless inverse scattering problem We also consider the inverse scattering problem associated with canonical differential equations These equations provide a convenient unifying framework to discuss a number of questions pertaining for example to inverse scattering non linear partial differential equations and are studied in the last section of this book The Asymptotic Distribution of Eigenvalues of Partial Differential Operators Yu Safarov,D. Vassilev,1997 This work studies the eigenvalues of elliptic linear boundary value problems Its main content is a set of asymptotic formulas describing the distribution of eigenvalues with high sequential numbers providing a basic introduction to mathematical concepts and tools **Operator Theory and Boundary Eigenvalue Problems** I.
