Functional Evaluation of Stroke Patients Naoichi Chino,John L. Melvin,2012-12-06 Stroke is one of the major causes of disability in the world Consequently an effective rehabilitation regimen is the goal of specialists working in the field worldwide The implementation of rehabilitation programs for the stroke patient is broad in scope and requires first of all an objective scientific evaluation method In 1980 the World Health Organization developed the International Classification of Impairments, Disabilities and Handicaps It categorized impairments and disabilities on the basis of functional evaluation but took into account cultural and socioeconomic factors when defining handicaps thus making it difficult to use the same functional evaluation instrument for the three phenomena In this monograph experts in the treatment of stroke from Japan the United States and Europe share their ideas presented during the 31st Annual Convention of the Japanese Association of Rehabilitation Medicine held in June 1994 All the participants freely contributed their views on the functional assessment and prognosis of stroke patients Indeed their contributions shed light on possible breakthroughs in the future for the development of rehabilitation regimens for stroke patients

The Neuropsychology of Everyday Life: Assessment and Basic Competencies David E. Tupper,Keith D. Cicerone,2012-12-06 For a period of some fifteen years following completion of my internship training in clinical psychology 1950-1951 at the Washington University School of Medicine and my concurrent successful navigation through that school's neuroanatomy course clinical work in neuropsychology for me and the psychologists of my generation consisted almost exclusively of trying to help our physician colleagues differentiate patients with neurologic from those with psychiatric disorders In time experience led all of us from the several disciplines involved in this enterprise to the conclusion that the crude diagnostic techniques available to us circa 1945-1965 had garnered us little valid information upon which to base such complex differential diagnostic decisions It now is gratifying to look back and review the remarkable progress that has occurred in the field of clinical neuropsychology in the four decades since I was a graduate student In the late 1940s such pioneers as Ward Halstead Alexander Luria George Yacorzynski Hans Lukas Teuber and Arthur Benton already were involved in clinical studies that by the late 1960s would markedly have improved the quality of clinical practice However the only psychological tests that the clinical psychologist of my immediate post-Second World War generation had as aids for the diagnosis of neurologically based conditions involving cognitive deficit were such old standbys as the Wechsler Bellevue Rorschach Draw-A-Person Bender Gestalt and Graham Kendall Memory for Designs Test
