

Real-Valued Functions

A Real-Valued Function f of a real variable x from set X to set Y is a correspondence that assigns to each number x in set X exactly one number y in set Y

X and Y are sets of real numbers

This sounds familiar but the words seem different.

The domain of f is the set X . The number y is the **image** of x under f and is denoted by $f(x)$. The **range** of f is a subset of Y and consists of all images of numbers in set X
