International Money And Capitalist Crisis E. A. Brett, 2019-03-07 In attempting to understand the growing importance of the monetary problem for deficit countries the author found himself drawn into more and more abstract and general problems of economic theory and institutional change The post war period has completed the internationalisation of capitalism production at any point depends directly upon a mult *Theories of International Economics* Peter M. Lichtenstein, 2016-03-31 International economic theories emerged within particular social economic and political frameworks and were developed as solutions to the problems of contemporary economics In order to understand the increasingly complex and interdependent state of today's international economy we need to realise the importance of those theories that came before However many international economics textbooks do not place the theories they discuss within this historical context *Theories of International Economics* aims to redress the balance by taking a pluralistic approach presenting with authority both orthodox and heterodox international economic theories Each chapter shows the necessarily interdependent nature of schools of international economic theories by including an historical component that shows how each school of thought developed why it developed and what it has to say about the contemporary world This text examines a wide range of theories with an emphasis on the benefits of a pluralistic approach addressing schools of thought including Classical Neoclassical Keynesian Post Keynesian Marxian Austrian Institutional and Feminist Economics Mercantilism and Neo Mercantilism alongside and in relation to each other This approach allows the scholarly value of each approach to be understood and appreciated and in doing so enables a greater understanding of the world economy This book is suitable for use as either a core or supplementary text on international economics and international political economy courses The Economics of Regional Trading Arrangements Richard W. T. Pomfret, 2001 Regionalism became a major issue in international commercial

diplomacy during the 1990s The European Union's 1992 program the formation of NAFTA and attempts to form or strengthen regional trading arrangements in South America southern Africa and Southeast Asia were all viewed as challenges to the nondiscrimination principle that had been the cornerstone of the postwar international trading system This book provides a unified analysis of policies which discriminate among trading partners featuring ample treatments of both history and theory as well as a review of empirical studies
