Scarcity and Frontiers Edward B. Barbier, 2010-12-23 Throughout much of history a critical driving force behind global economic development has been the response of society to the scarcity of key natural resources Increasing scarcity raises the cost of exploiting existing natural resources and creates incentives in all economies to innovate and conserve more of these resources However economies have also responded to increasing scarcity by obtaining and developing more of these resources Since the agricultural transition over 12 000 years ago this exploitation of new frontiers has often proved to be a pivotal human response to natural resource scarcity This book provides a fascinating account of the contribution that natural resource exploitation has made to economic development in key eras of world history This not only fills an important gap in the literature on economic history but also shows how we can draw lessons from these past epochs for attaining sustainable economic development in the world today

The Earth as Transformed by Human Action B. L. Turner, William C. Clark, Robert W. Kates, John F. Richards, Jessica T. Mathews, William B. Meyer, 1993-01-29 The Earth as Transformed by Human Action is the culmination of a mammoth undertaking involving the examination of the toll our continual strides forward technical and social take on our world The purpose of such a study is to document the changes in the biosphere that have taken place over the last 300 years to contrast global patterns of change to those appearing on a regional level and to explain the major human forces that have driven these changes The first section deals strictly with the major human forces of

the past 300 years and the second is a detailed account of the transformations of the global environment wrought by human action. The final section examines a range of perspectives and theories that purport to explain human actions with regard to the biosphere. Australia's First Frontier Thomas Melville Perry, 1963      *APAIS 1999: Australian public affairs information service* ,      **Science, Sexuality, and Race in the United States and Australia, 1780s-1890s** Gregory D. Smithers, 2013-02-01. This book combines transnational history with the comparative analysis of racial formation and reproductive sexuality in the settler colonial spaces of the United States and British Australia. Specifically, the book places whiteness and the changing definition of what it meant to be white in nineteenth century America and Australia at the center of our historical understanding of racial and sexual identities. In both the United States and Australia, whiteness was defined in opposition to the imagined cultural and biological inferiority of the Indian, Negro, and Aboriginal savage. Moreover, Euro-Americans and Euro-Australians shared a common belief that whiteness was synonymous with the extension of settler colonial civilization. Despite this, two very different understandings of whiteness emerged in the nineteenth century. The book therefore asks why these different racial understandings of whiteness and the quest to create culturally and racially homogeneous settler civilizations developed in the United States and Australia.
