*Neuroendocrinology of Aging* Joseph Meites, 2012-12-06 JOSEPH MEITES The idea that the endocrine system is involved in aging processes is as old as the beginnings of endocrinology The first endocrine experiment related to aging was reported by Brown Sequard who is usually regarded as the father of endocrinology In 1889 at the age of 72 years he reported that he had succeeded in rejuvenating himself by injections of testicular extracts from dogs and guinea pigs Although the favorable effects observed may have been due mainly to the powers of auto suggestion his reports created a considerable interest in endocrinology and its relation to aging and eventually led to the use of estrogens for treating certain pre and postmenopausal symptoms in women and androgens for treating some symptoms in aging men Up to about the 1960 s the relatively few studies on endocrine aging relationships dealt mainly with changes in weight and histological appearance of endocrine organs in aging animals and human subjects and included a limited number of measurements of endocrine function by bioassays and chemical for steroids procedures Within these limitations gerontological investigators were unable to establish any definite relationships between endocrine functions and aging processes with the exception of the connection

Farquhar, 2013-09-03 Ultrastructure in Biological Systems Volume 7 The Anterior Pituitary presents the mechanisms involved in the release of adenohypophyseal hormones This book explores the morphological approach to fundamental aspects of pituitary cell biology Organized into eight chapters this book begins with an overview of how the ultrastructure of cellular organelles can yield valid criteria of identification This text then discusses the cellular and subcellular localization of anterior pituitary hormones by immunoelectron microscopy Other chapters consider the localization of possible receptor sites for hormonal messengers on anterior pituitary cells This book discusses as well the in vitro systems that have undergone a significant development which is the ultrastructure and function of dispersed anterior pituitary cells The final chapter deals with the ultrastructure of pituitary tumors which can be divided into two categories namely functional and nonfunctional according to the presence or the absence in the host of hormonal hypersecretion signs This book is a valuable resource for biochemists endocrinologists histologists and pathologists

**Biosynthesis and Secretion of Milk / Diseases** Bruce L. Larson, Vearl R. Smith, 2013-10-22 Lactation A Comprehensive Treatise Volume II Biosynthesis and Secretion of Milk Diseases is part of a three volume treatise containing a total of 28 chapters The present volume is devoted to the functioning of the mammary gland in the synthesis and secretion of milk Emphasis has been placed on studies which have described on a biochemical and molecular basis the operation of the pathways and structures involved in the biosynthesis of milk in the functional secretory cells of the mammary gland and the diseases of lactation that can affect them The volume is organized into two parts Part I on the biosynthesis of milk covers topics such as the general metabolism associated with the synthesis of milk biosynthesis of milk fat and milk proteins biochemistry of lactose and related carbohydrates and cell structure relating to the formation and secretion of milk Part II on diseases of the mammary gland and lactation includes studies on the clinical endocrinology of prolactin microbial diseases of the mammary gland ketosis and mouse mammary tumors      *Neurotransmitters And Anterior Pituitary Function* Giuseppe Nistico, Umberto Scapagnini, 2012-12-02 Neurotransmitters and Anterior Pituitary Function discusses research findings on neurotransmitter neurohormone interactions in the control of the anterior pituitary This book contains five chapters that specifically tackle the most salient constituents of the neural endocrine communication system in mammals This book deals first with the biochemistry physiology and pharmacology of proved or putative neurotransmitters as well as some of the techniques used for determining their synthesis or turnover in the central nervous system CNS of experimental animals or in man These topics are followed by a discussion on the principal functions of the most well known neurotransmitter containing neurons based on sophisticated techniques for neurotransmitter measurements A chapter highlights both traditional and a vast series of developed drugs that affect both neurotransmitter and neuroendocrine function Discussions then shift to the

experimental evidence on pituitary function control by the brain through releasing and inhibiting hormones secreted by hypothalamic neuroendocrine cells the chemical isolation identification and synthesis of hypothalamic neurohormones and concepts of their mechanism of action at the level of the pituitary cells This text further explores the role of specific brain neurotransmitters in controlling pituitary hormone secretions in both experimental animals and in man and the possible CNS sites where neurotransmitters and neurohormones interact for the control of anterior pituitary secretion The concluding chapter describes the actual or potential application of neuropharmacologic approaches to the diagnosis of and therapy for specific disorders of neuroendocrine function Clinical neuroendocrinologists and researchers and students in neuroendocrinology neurobiology neuropharmacology neurophysiology and psychiatry will find this book invaluable

**Sex and the Brain** Gillian Einstein, 2007-10-19 A collection of foundational texts on the nature and behavioral consequences of sex differences in the brain allowing readers to follow the development of a rapidly growing but contentious field and giving them the tools to analyze emerging scientific findings from many perspectives This collection of foundational papers on sex differences in the brain traces the development of a much invoked fast growing young field at the intersection of brain and behavior The reader is introduced to the meaning and nature of sexual dimorphisms the mechanisms and consequences of steroid hormone action and the impact of the field on interpretations of sexuality and gender Building on each other in point counterpoint fashion the papers tell a fascinating story of an emerging science working out its core assumptions Experimental and theoretical papers woven together by editor's introductions open a window onto knowledge in the making and a vigorous debate between reductionist and pluralist interpreters Five major sections include papers on conceptual and methodological background central nervous system dimorphisms mechanisms for creating dimorphisms dimorphisms and cognition and dimorphisms and identity Each section builds from basic concepts to early experiments from experimental models to humans and from molecules to mind Papers by such leading scholars as Arthur Arnold Frank Beach Anne Fausto Sterling Patricia Goldman Rakic Doreen Kimura Simon LeVay Bruce McEwen Michael Merzenich Bertram O Malley Geoffrey Raisman and Dick Swaab illustrate a rich blend of perspectives approaches methods and findings Sex and the Brain will show students how a scientific paper can be analyzed from many perspectives and supply them with critical tools for judging a rapidly emerging science in a contentious area

Development of Responsiveness to Steroid Hormones Alvin M. Kaye, Myra Kaye, 2013-10-22 Development of Responsiveness to Steroid Hormones is a collection of papers presented at the Bat Sheva Seminar of the same name which was held in Rehovot Israel on October 18-26 1978 and sponsored by the Bat Sheva de Rothschild Foundation for the Advancement of Science in Israel in cooperation with The Weizmann Institute of Science Contributors explore how the steroid receptor complex modulates transcription of RNA and cover topics ranging from the sequential acquisition of responsiveness to estrogen in the rat uterus to the ontogeny of steroid receptors in the guinea pig This book is comprised of 29 chapters and begins with a review of estrogen and estrogen effects in rat uterus and pituitary in

culture The embryonic chick Mullerian duct and several fetal guinea pig organs are then considered followed by discussions on mammalian and chick liver multi hormonal control in rat liver progesterone and decidualization and rat mammary gland in culture Glucocorticoids in developing pancreas lung and liver are examined along with ecdysteroids in both locusts and Drosophila Refractoriness is exemplified by gonadotropin action in the ovary The remaining chapters deal with the role of steroid hormone receptors in brain development the neural trigger for ovulation aromatization and development of responsiveness of the brain to gonadal steroids and neuroendocrine correlates of female offspring interaction in maternal rats This monograph will be of value to physiologists biologists and biochemists      **Advances in the Study of Behavior**, 1976-04-23 **Advances in the Study of Behavior      The Physiology of Thirst and Sodium Appetite** James Thomas Fitzsimons, 1979-10-18      **Duncan's Diseases of Metabolism: Endocrinology** Garfield George Duncan, 1974
