National Library of Medicine Current Catalog National Library of Medicine (U.S.), **International Books in Print**, 1990 *Plasticity in the Vertebrate Pituitary, Including Regulatory Mechanisms* Finn-Arne Weltzien, Karine Rizzoti, Romain Fontaine, 2021-07-14 *Melatonin after Four Decades* James Olcese, 2006-04-11 In the forty years since melatonin's isolation and characterization a large and multifaceted database has accrued This book documents the diverse research contributions of most of the major laboratories in the field of melatonin research as presented in a special conference to mark the 40 year anniversary of the isolation and chemical identification of this hormone In addition many chapters by younger scientists provide an exciting glimpse of where melatonin research is heading in the future **Medical and Health Care Books and Serials in Print**, 1997 **Neuroendocrine Perspectives** Eugenio E. Müller, Robert M. MacLeod, 2012-12-06 *Neuroendocrine Perspectives Volume 7* is part of an international book series designed to keep clinicians and researchers appraised of important trends and new data in basic and clinical neuroendocrinology It focuses on four very rapidly evolving major topics the role of dopaminergic regulation of the intermediate pituitary lobe in elucidating intracellular signal transduction pathways and other regulatory mechanisms involved in transsynaptic regulation of peptide biosynthesis post translational processing and hormone secretion the physiological and clinical implications of corticotropin releasing factor for such areas as diagnosing Cushing's syndrome defining the hypothalamic and pituitary origins of secondary adrenal insufficiency and distinguishing Cushing's syndrome from psychiatric states associated with hypercortisolism the large number of neurotrophic factors that affect CNS neurons and of neurite promoting factors that modulate neuronal performance with emphasis on their mechanisms of action and their possible therapeutic applications to peripheral neuropathies and central diseases and the many factors that regulate changes in female reproductive cycles during middle age with careful distinction between neuroendocrine and ovarian components and special attention to the possible cause and effect relationship within the cascade of events resulting in acyclicity and infertility *Actions of Prolactin On Molecular Processes* James A. Rillema, 2018-01-10 It is well established that the initial interaction of prolactin with its target cells is with specific receptor molecules located on the external surface of the plasma membrane Subsequent to the prolactin receptor interaction however the molecular events that culminate in the regulation of biological processes are not totally understood This book was assembled to review and analyse the currently available information relative to the molecular events involved in the actions of prolactin on cells Hopefully the assimilation of this information will provide the basis for ultimately determining the sequence of molecular reactions by which prolactin expresses its biological responses *Hormones and Reproduction of Vertebrates, Volume 1* David O. Norris, Kristin H. Lopez, 2024-07-17 *Hormones and Reproduction of Vertebrates Volume 1 Fishes* is the first of five second edition volumes representing a comprehensive and integrated overview of hormones and reproduction in fishes amphibians reptiles birds and mammals The book includes coverage of

endocrinology neuroendocrinology physiology behavior and anatomy of fish reproduction It provides a broad treatment of the roles of pituitary thyroid adrenal and gonadal hormones in all aspects of reproduction as well as descriptions of major life history events New to this edition is a concluding assessment of the effect of environmental influences on fishes Initial chapters in this book broadly examine sex determination reproductive neuroendocrinology stress and hormonal regulation as it relates to testicular and ovarian development and function Subsequent chapters examine hormones and reproduction of specific taxa including agnathan chondrichthyan and sarcopterygian fishes The book concludes with an examination of the environmental influences on hormones and reproduction of fishes including endocrine disrupting chemicals and climate change **Hormones and Reproduction of Vertebrates Volume 1 Fishes** is designed to provide a readable coordinated description of reproductive basics in fishes as well as an introduction to the latest trends in reproductive research and a presentation of our understanding of reproductive events gained over the past decade It may serve as a stand alone reference for researchers and practitioners in the field of ichthyology or as one of five coordinated references aligned to provide topical treatment across vertebrate taxa for researchers practitioners and students focused on vertebrate endocrinology Covers endocrinology neuroendocrinology physiology behavior and anatomy of fish reproduction Includes pituitary pineal thyroid adrenal and gonadal hormones Focuses on teleosts as well as information on agnathan chondrichthyan and sarcopterygian fishes Provides new coverage on endocrine disrupting chemicals microplastics and climate change

subject of this book is neuroendocrinology that branch of biological science devoted to the interactions between the two major integrative organ systems of animals the endocrine and nervous systems Although this science today reflects a fusion of endocrinology and neurobiology this synthetic approach is relatively recent At the beginning of the 20th century when the British physiologists Bayliss and Starling first proposed endocrinology to be an independent field of inquiry they went to great lengths to establish the autonomy of chemical secretions in general and their independence from nervous control in particular Bayliss W M and Starling E H 1902 The mechanism of pancreatic secretion *Physiol* 28 325 They argued with Pavlov who said that there was a strong influence of the nervous system on the gastrointestinal phenomena the endocrinologists were studying For several decades the English physiologists prevailed at least in the West and Pavlov's critique was not taken to heart by the practitioners of the newly emerging discipline of endocrinology Through the work of Harris the Scharrers Sawyer Everett and others there has been something of a scientific detente in the latter half of this century the hybrid field of neuroendocrinology is now regarded as one of the corner stones of modern neural science and is of
