provides both an up to date overview of the field of life cycle civil engineering and significant contributions to the process of making more rational decisions to mitigate the life cycle risk and improve the life cycle safety reliability resilience and sustainability of structures and infrastructure systems exposed to diverse environments in a changing climate for the purpose of enhancing the welfare of society It will serve as a valuable reference to all concerned with life cycle of civil engineering systems including students researchers practitioners consultants contractors decision makers and representatives of managing bodies and public authorities from all branches of civil engineering State-of-the-art of Structural Test Methods for Walls, Floors, Roofs, and Complete Buildings C. W. C. Yancey, L. E. Cattaneo, 1974 Based on information obtained from a review of the literature and from liaison with committees concerned with the development and revision of voluntary standards it was found that there is a dearth of research information contributing directly to the development of test methods Most of the research conducted on building components has been carried out either to observe the behavior of a sample of a particular type of construction or to evaluate the performance of a specimen against some performance requirements However helpful inferences can be made on the basis of some of the documentation especially that contained in reports of full scale tests on housing An up to date status report of voluntary test standards activities in the U S was prepared through verbal and written communication with members of the technical subcommittees of ASTM Committee E 6 on Performance of Building Construction
