**Evolutionary Behavioral Ecology** David Westneat, Charles Fox, 2010-03-05 Evolutionary Behavioral Ecology is intended to be used as a text for graduate students and a sourcebook for professional scientists seeking an understanding of the evolutionary and ecological processes shaping behavior across a wide array of organisms and a diverse set of behaviors. Chapters are written by leading experts in the field providing a core foundation, a history of conceptual developments and fresh insight into the controversies and themes shaping the continuing development of the field. Essays on adaptation, selection, fitness, genetics, plasticity and phylogeny as they pertain to behavior place the field in the broader context of ecology and evolution. These concepts along with a diversity of theoretical approaches are applied to the evolution of behavior in a many contexts from individual decision making of solitary animals through to complex social interactions. Chapters integrate conceptual and theoretical approaches with recent empirical advances to understand the evolution of behavior from foraging, dealing with risk, predator avoidance and an array of social behaviors including fighting and cooperation with conspecifics and conflict and cooperation between the sexes. The material emphasizes integrative and novel approaches to behavior including cognitive ecology, personality, conservation biology, the links between behavior and evolution, the evolution of human social behavior and ways in which modern genetic analyses can augment the study of behavior.

*Invariants of Behavior* Mario Negrello, 2011-06-02 The study of the brain and behavior is illuminated with the discovery of invariances. Experimental brain research uncovers constancies amidst variation with respect to interventions and transformations prescribed by experimental paradigms. Place cells, mirror neurons, event-related potentials and areas differentially active in fMRI all illustrate the pervasive role of invariances in neural systems in relation to their function.

*Evolutionary Psychology* Steven J. Scher, Frederick Rauscher, 2003 Evolutionary psychology has been dominated by one particular method for studying the mind and behavior. This is the first book to both question that monopoly and suggest a broad range of particular alternatives. Psychologists, philosophers, biologists, anthropologists and others offer different methods for combining psychology and evolution. They recommend specific changes to evolutionary psychology using a wide variety of theoretical assumptions. In addition, some essays analyze the underpinnings of the dominant method, relate it to the context of evolutionary and psychological theory and to general philosophy of science and discuss how to test approaches to evolutionary psychology. The aim of this collection is not to reject evolutionary psychology but to open up new vistas which students and researchers can use to ensure that evolutionary psychology continues to thrive.
