Function, Selection, and Design David J. Buller, 1999-06-24 This authoritative book written by the leading experts in the field of the philosophy of biology brings together the defining literature in the debate concerning proper analysis of teleological concepts in biology The introduction provides a clear and coherent overview to the philosophical progress regarding the nature of function in biology and the book's chronological structure offers historical insight and perspective This anthology is well planned representative and current in its orientation All of the major positions and figures are represented and the volume is framed by Buller's essays an organization that serves to consolidate many themes introduced by the diverse slate of authors The scientific revolution ushered in a picture of the universe as governed solely by mechanical causation working forward in time which appeared to leave no room in nature for teleological or goal directed processes But within the last decade a near consensus has emerged among philosophers that the theory of evolution by natural selection provides the framework for a wholly naturalist analysis of the concept of function in biology and thus solves the traditional philosophical problems regarding teleology *Function Selection and Design* illustrates this growing consensus and the recent debate concerning the details of a fully adequate analysis of the concept of function Contributors include Colin Allen Andr Ariew Marc Bekoff John Bigelow David J Buller Robert Cummins Peter Godfrey Smith Richard Goode Paul E Griffiths Philip Kitcher Ruth Garrett Millikan Karen Neander Robert Pargetter Denis Walsh and Larry Wright

Handbook of Paleoanthropology Winfried Henke, Ian Tattersall, 2007-05-10 This 3 volume handbook brings together contributions by the world's leading specialists that reflect the broad spectrum of modern palaeoanthropology thus presenting an indispensable resource for professionals and students alike Vol 1 reviews principles methods and approaches recounting recent advances and state of the art knowledge in phylogenetic analysis palaeoecology and evolutionary theory and philosophy Vol 2 examines primate origins evolution behaviour and adaptive variety emphasizing integration of fossil data with contemporary knowledge of the behaviour and ecology of living primates in natural environments Vol 3 deals with fossil and molecular evidence for the evolution of *Homo sapiens* and its fossil relatives

Functions: selection and mechanisms Philippe Huneman, 2013-02-20 This volume handles in various perspectives the concept of function and the nature of functional explanations topics much discussed since two major and conflicting accounts have been raised by Larry

Wright and Robert Cummins papers in the 1970s Here both Wright's etiological theory of functions and Cummins systemic conception of functions are refined and elaborated in the light of current scientific practice with papers showing how the etiological theory faces several objections and may in reply be revisited while its counterpart became ever more sophisticated as researchers discovered fresh applications for it Relying on a firm knowledge of the original positions and debates this volume presents cutting edge research evincing the complexities that today pertain in function theory in various sciences Alongside original papers from authors central to the controversy work by emerging researchers taking novel perspectives will add to the potential avenues to be followed in the future Not only does the book adopt no a priori assumptions about the scope of functional explanations it also incorporates material from several very different scientific domains e g neurosciences ecology or technology In general functions are implemented in mechanisms and functional explanations in biology have often an essential relation with natural selection These two basic claims set the stage for this book's coverage of investigations concerning both functional explanations and the metaphysics of functions It casts new light on these claims by testing them through their confrontation with scientific developments in biology psychology and recent developments concerning the metaphysics of realization Rather than debating a single theory of functions this book presents the richness of philosophical issues raised by functional discourse throughout the various sciences

Origins of Objectivity Tyler Burge, 2010-03-04 Tyler Burge presents a substantial original study of what it is for individuals to represent the physical world with the most primitive sort of objectivity By reflecting on the science of perception and related psychological and biological sciences he gives an account of constitutive conditions for perceiving the physical world and thus aims to locate origins of representational mind *Origins of Objectivity* illuminates several long standing central issues in philosophy and provides a wide ranging account of relations between human and animal psychologies

Biological Autonomy Alvaro Moreno, Matteo Mossio, 2015-05-04 Since Darwin Biology has been framed on the idea of evolution by natural selection which has profoundly influenced the scientific and philosophical comprehension of biological phenomena and of our place in Nature This book argues that contemporary biology should progress towards and revolve around an even more fundamental idea that of autonomy Biological autonomy describes living organisms as

organised systems which are able to self produce and self maintain as integrated entities to establish their own goals and norms and to promote the conditions of their existence through their interactions with the environment Topics covered in this book include organisation and biological emergence organisms agency levels of autonomy cognition and a look at the historical dimension of autonomy The current development of scientific investigations on autonomous organisation calls for a theoretical and philosophical analysis This can contribute to the elaboration of an original understanding of life including human life on Earth opening new perspectives and enabling fecund interactions with other existing theories and approaches This book takes up the challenge *Forthcoming Books* Rose Arny,1999-04 *Scientific American* ,2008 **American Book Publishing Record** ,2000 **Crítica** ,2014 Bibliografisch Repertorium Van de Wijsbegeerte) ,1999 The Philosopher's Index ,2008 Vols for 1969 include a section of abstracts **Sex, Reproduction and Darwinism** Filomena de Sousa,Gonzalo Munévar,2015-10-06 This collection of essays looks at sexuality and reproduction from an evolutionary perspective Covering experimental discoveries as well as theoretical investigations the volume explores the relationship between evolution and other areas of human behaviour *Subject Guide to Books in Print* ,1997 Books in Series, 1876-1949 R.R.
