This book presents English translations of Michele Sce's most important works originally written in Italian during the period 1955-1973 on hypercomplex analysis and algebras of hypercomplex numbers Despite their importance these works are not very well known in the mathematics community because of the language they were published in Possibly the most remarkable instance is the so called Fueter-Sce mapping theorem which is a cornerstone of modern hypercomplex analysis and is not yet understood in its full generality This volume is dedicated to revealing and describing the framework Sce worked in at an exciting time when the various generalizations of complex analysis in one variable were still in their infancy In addition to faithfully translating Sce's papers the authors discuss their significance and explain their connections to contemporary research in hypercomplex analysis They also discuss many concrete examples that can serve as a basis for further research The vast majority of the results presented here will be new to readers allowing them to finally access the original sources with the benefit of comments from fellow mathematicians active in the field of hypercomplex analysis As such the book offers not only an important chapter in the history of hypercomplex analysis but also a roadmap for further exciting research in the field      **Modern Trends in Hypercomplex Analysis** Swanhild Bernstein, Uwe Kähler, Irene Sabadini, Franciscus Sommen, 2016-11-21 This book contains a selection of papers presented at the session Quaternionic and Clifford Analysis at the 10th ISAAC Congress held in Macau in August 2015 The covered topics represent the state of the art as well as new trends in hypercomplex analysis and its applications      Advances in Hypercomplex Analysis Graziano Gentili, Irene Sabadini, Michael Shapiro, Franciscus Sommen, Daniele C. *Hypercomplex Analysis: New Perspectives and Applications* Swanhild Bernstein,Uwe Kähler,Irene Sabadini, Frank Sommen,2014-10-10 Hypercomplex analysis is the extension of complex analysis to higher dimensions where the concept of a holomorphic function is substituted by the concept of a monogenic function In recent decades this theory has come to the forefront of higher dimensional analysis There are several approaches to this quaternionic analysis which merely uses quaternions Clifford analysis which relies on Clifford algebras and generalizations of complex variables to higher dimensions such as split complex variables This book includes a selection of papers presented at the session on quaternionic and hypercomplex analysis at the ISAAC conference 2013 in Krakow Poland The topics covered represent new perspectives and current trends in hypercomplex analysis and applications to mathematical physics image analysis and processing and mechanics

The Mathematics of Minkowski Space-Time Francesco Catoni,Dino Boccaletti,Roberto Cannata,Vincenzo Catoni,Enrico Nichelatti,Paolo Zampetti,2008-06-29 This book arose out of original research on the extension of well established applications of complex

numbers related to Euclidean geometry and to the space time symmetry of two dimensional Special Relativity The system of hyperbolic numbers is extensively studied and a plain exposition of space time geometry and trigonometry is given Commutative hypercomplex systems with four unities are studied and attention is drawn to their interesting properties

*New Directions in Function Theory: From Complex to Hypercomplex to Non-Commutative* Daniel Alpay, Ronen Peretz, David Shoikhet, Mihaela B. Vajiac, 2022-01-01 This volume presents selected contributions from experts gathered at Chapman University for a conference held in November 2019 on new directions in function theory The papers written by leading researchers in the field relate to hypercomplex analysis Schur analysis and de Branges spaces new aspects of classical function theory and infinite dimensional analysis Signal processing constitutes a strong presence in several of the papers A second volume in this series of conferences this book will appeal to mathematicians interested in learning about new fields of development in function theory

*Encyclopaedia of Mathematics* Michiel Hazewinkel, 2013-12-01. This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics. It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all, there are survey-type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up-to-date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole, these articles should be understandable to mathematics students in their first specialization years, to graduates from other mathematical areas, and depending on the specific subject, to specialists in other domains of science, engineers, and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques, and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article, of medium length, contains more detailed concrete problems, results, and techniques.

**Complex Numbers in  $n$  Dimensions** S. Olariu, 2002-06-20. Two distinct systems of hypercomplex numbers in  $n$  dimensions are introduced in this book for which the multiplication is associative and commutative and which are rich enough in properties such that exponential and trigonometric forms exist and the concepts of analytic  $n$ -complex function, contour integration, and residue can be defined. The first type of hypercomplex numbers, called polar hypercomplex numbers, is characterized by the presence in an even number of dimensions greater or equal to 4 of two polar axes and by the presence in an odd number of dimensions of one polar axis. The other type of hypercomplex numbers exists as a distinct entity only when the number of dimensions  $n$  of the space is even, and since the position of a point is specified with the aid of  $n/2 - 1$  planar angles, these numbers have been called planar hypercomplex numbers. The development of the concept of analytic functions of hypercomplex variables was rendered possible by the existence of an exponential form of the  $n$ -complex numbers. Azimuthal angles, which are cyclic variables, appear in these forms at the exponent and lead to the concept of  $n$ -dimensional hypercomplex residue. Expressions are given for the elementary functions of  $n$ -complex variable. In particular, the exponential function of an  $n$ -complex number is expanded in terms of functions called in this book  $n$ -dimensional cosexponential functions of the polar and respectively planar type, which are generalizations to  $n$  dimensions of the sine, cosine, and exponential functions. In the case of polar complex numbers, a polynomial can be written as a product of linear or

quadratic factors although it is interesting that several factorizations are in general possible In the case of planar hypercomplex numbers a polynomial can always be written as a product of linear factors although again several factorizations are in general possible The book presents a detailed analysis of the hypercomplex numbers in 2 3 and 4 dimensions then presents the properties of hypercomplex numbers in 5 and 6 dimensions and it continues with a detailed analysis of polar and planar hypercomplex numbers in  $n$  dimensions The essence of this book is the interplay between the algebraic the geometric and the analytic facets of the relations

**Computational Science and Its Applications - ICCSA 2011** Beniamino Murgante, Osvaldo Gervasi, Andres Iglesias, David Taniar, Bernady O. Apduhan, 2011-06-17 The five volume set LNCS 6782 6786 constitutes the refereed proceedings of the International Conference on Computational Science and Its Applications ICCSA 2011 held in Santander Spain in June 2011 The five volumes contain papers presenting a wealth of original research results in the field of computational science from foundational issues in computer science and mathematics to advanced applications in virtually all sciences making use of computational techniques The topics of the fully refereed papers are structured according to the five major conference themes geographical analysis urban modeling spatial statistics cities technologies and planning computational geometry and applications computer aided modeling simulation and analysis and mobile communications

**Encyclopaedia of Mathematics (set)** Michiel Hazewinkel, 1994-02-28 The Encyclopaedia of Mathematics is the most up to date authoritative and comprehensive English language work of reference in mathematics which exists today With over 7 000 articles from A integral to Zygmund Class of Functions supplemented with a wealth of complementary information and an index volume providing thorough cross referencing of entries of related interest the Encyclopaedia of Mathematics offers an immediate source of reference to mathematical definitions concepts explanations surveys examples terminology and methods The depth and breadth of content and the straightforward careful presentation of the information with the emphasis on accessibility makes the Encyclopaedia of Mathematics an immensely useful tool for all mathematicians and other scientists who use or are confronted by mathematics in their work The Encyclopaedia of Mathematics provides without doubt a reference source of mathematical knowledge which is unsurpassed in value and usefulness It can be highly recommended for use in libraries of universities research institutes colleges and even schools
