Brain Networks for Studying Healthy and Pathological Aging Mechanisms and Intervention Efficacy Christos Frantzidis, Ana B. Vivas, Panagiotis D. Bamidis, 2020-11-18 Previous studies showed that both healthy and pathological aging are associated with changes in brain structure and function of the mature human brain The most prominent anatomical alteration are changes in prefrontal cortex morphology volume loss and reduced white matter integrity and hippocampal atrophy Cognitive decline affects mainly the performance of episodic memory speed of sensory information processing working memory inhibitory function and long term memory It has been also proposed that due to the aforementioned changes the aging brain engages in compensatory brain mechanism such as a broader activation of cortical regions mainly frontal rather than specialized activation Evidence suggests that similar changes occur with pathological aging but to a greater extent In this case information flow is disrupted due to neurodegeneration functional activation of posterior occipito temporal regions is decreased and as a consequence the brain fails to process sensorial input in the ventral pathway and cognitive deficits appear In the last years functional alterations associated with aging have been studied using the mathematical notion of graph theory that offers an integrative approach since it examines different properties of the brain network 1 Organization level 2 amount of local information processing 3 information flow 4 cortical community structure and 5 identification of functional anatomical hubs So graph theory offers an attractive way to model brain networks organization and to quantify their pathological deviations Previous studies have already employed this mathematical notion and demonstrated that age related neurodegeneration is often accompanied by loss of optimal network organization either due to diminished local information processing or due to progressive isolation of distant brain regions They have also found that changes in network properties may be present even in the preclinical phase which could be taken as a biological marker of disease

Climate Change Impacts on Water Resources Ramakar Jha, Vijay P. Singh, Vivekanand Singh, L. B. Roy, Roshni Thendiyath, 2021-03-27 This book provides insights and a capacity to understand the climate change phenomenon its impact on water resources and possible remedial measures The impact of climate change on water resources is a global issue and cause for concern Water resources in many countries are extremely stressed and climate change along

with burgeoning populations the rise in living standards and increasing demand on resources are factors which serve to exacerbate this stress The chapters provide information on tools that will be useful to mitigate the adverse consequences of natural disasters Fundamental to addressing these issues is hydrological modelling which is discussed in this book and ways to combat climate change as an important aspect of water resource management The Governance of Public and Non-Profit Organizations Chris Cornforth,2002-10-24 Governing boards play a crucial role in ensuring that public and non profit organizations are publicly accountable and perform well Until now there have been relatively few detailed empirical studies of what boards do in practice but this book fills that gap by bringing together analyses based upon some of the best recent empirical studies Using *Technology and Finance* Morten Balling, Frank Lierman, A. W.
