Neutrinos Arnold S. Lavro,2002 Neutrinos are one of the most abundant particles in the universe Because they have very little interaction with matter however they are incredibly difficult to detect Neutrinos are similar to the more familiar electron with one crucial difference neutrinos do not carry electric charge Because neutrinos are electrically neutral they are not affected by the electromagnetic forces which act on electrons Three types of neutrinos are known Each type or flavour of neutrino is related to a charged particle which gives the corresponding neutrino its name Hence the electron neutrino is associated with the electron and two other neutrinos are associated with heavier versions of the electron called the muon and the tau The book presents citations from the literature for the last three years from the journal literature and the existent book literature Access is provided by subject author and title indexes

Irreversible Time Physics Igor Taganov, 2020-03-06 In modern science including theoretical physics as in the early classical mechanics the unnatural reversible time of Newton based on the medieval concept of geometric time by Nicholas Oresme is still used This original sin of natural sciences has unintended consequences and creates a set of paradoxes and methodological problems for science The book explores two new models of essentially irreversible time decelerating cosmological time and irreversible discrete time of a microcosm It discusses recent astronomical observations that reveal evidence of the cosmological deceleration of the pace of time in the distant cosmos in the solar system and on earth The structure of the model of irreversible discrete time of a microcosm as

considered in the book allows for the existence of both time and anti time In particular the model predicts new uncertainty relations and violation of the mirror symmetry of the integral internal parity of the entire population of micro particles that correspond to current studies of elementary particle physics **EPS - High Energy Physics '89** R. Fernandez Alvarez-Estrada,C. Lopez,F. Barreiro,2016-06-03 EPS High Energy Physics 89 presents the proceeding of the International Europhysics Conference on High Energy physics held in Madrid Spain on September 6 13 1989 This book outlines several topics on the interface between cosmology astrophysics and particle physics Organized into two parts encompassing 181 chapters this compilation of papers begins with an overview of the implications of the cosmic light element abundances This text then examines the various aspects of lattice field theory Other chapters consider the theoretical evidence of a fundamental length in string theory and outline the main features of the higher order corrections to the heavy quark inclusive cross section This book discusses as well the theory of heavy quark production in hadron collision The final chapter deals with the idea of low energy supersymmetry which relates the scale of supersymmetry breaking to the origin and stability of the electroweak scale This book is a valuable resource for astrophysicists physicists and scientists
