Fundamental Statistics for the Social and Behavioral Sciences Second Edition places statistics within the research process illustrating how they are used to answer questions and test ideas. Students learn not only how to calculate statistics but also how to interpret and communicate the results of statistical analyses in light of a study's research hypothesis. Featuring accessible writing and well integrated research examples, the book gives students a greater understanding of how research studies are conceived, conducted, and communicated. New and Proven Features: Updated data sets and research examples address real world issues and topics across the social and behavioral sciences, illustrating the use of statistical procedures to test research questions and hypotheses. Significantly expanded discussion of linear and multiple regression and correlation now gives regression its own separate chapter. Thorough presentation of formulas, hand calculations, and the presentation of visual data enable mastery of key techniques and prove especially helpful in flipped or online classes. In chapter learning checks and end of chapter exercises give students an opportunity to continually assess their understanding. Screenshots of statistical calculations using IBM SPSS Statistics at the end of chapters help students learn to use SPSS software and interpret output. Original SAGE videos for each chapter featuring author Howard K. Tokunaga bring concepts to life and appeal to diverse learners.

FUNDAMENTAL STATISTICS FOR THE BEHAVIORAL SCIENCES focuses on providing the context of statistics in behavioral research while emphasizing the importance of looking at data before jumping into a test. This practical approach provides students with an understanding of the logic behind the statistics so they understand why and how certain methods are used rather than simply carry out techniques by rote. Students move beyond number crunching to discover the meaning of statistical results and appreciate how the statistical test to be employed relates to the research questions posed by an experiment. Written in an informal style, the text provides an abundance of real data and research studies that provide a real life perspective and help students learn and understand concepts. In alignment with current trends in statistics in the behavioral sciences, the text emphasizes effect sizes and meta analysis and integrates frequent demonstrations of computer analyses through SPSS and R.
