Ecology Understanding Science And Nature:

Ecological Understanding Steward T.A. Pickett, Jurek Kolasa, Clive G. Jones, 2013-10-22 Ecology is an historical science in which theories can be as difficult to test as they are to devise. This volume intended for ecologists and evolutionary biologists reviews ecological theories and how they are generated, evaluated, and categorized. Synthesizing a vast and sometimes labyrinthine literature, this book is a useful entry into the scientific philosophy of ecology and natural history. The need for integration of the contributions to theory made by different disciplines is a central theme of this book. The authors demonstrate that only through such integration will advances in ecological theory be possible. Ecologists, evolutionary biologists, and other serious students of natural history will want this book. Ecological Understanding Steward T.A. Pickett, Jurek Kolasa, Clive G. Jones, 2010-08-04 This widely anticipated revision of the groundbreaking book Ecological Understanding updates this crucial sourcebook of contemporary philosophical insights for practicing ecologists and graduate students in ecology and environmental studies. The second edition contains new ecological examples, an expanded array of conceptual diagrams and illustrations, new text boxes summarizing important points or defining key terms, and new reference to philosophical issues and controversies. Although the first edition was recognized for its clarity, this revision takes the opportunity to make the exposition of complex topics still clearer to readers without a philosophical background. Readers will gain an understanding of the goals of science, the structure of theory, the kinds of theory relevant to ecology, the way that theory changes, what constitutes objectivity in contemporary science, and the role of paradigms and frameworks for synthesis within ecology and in integration with other disciplines. Finally, how theory can inform and anchor the public use of ecological knowledge in civic debates is laid out. This new edition refines the understanding of how the structure and change of theory can improve the growth and application of one of the 21st century's key sciences. Explains the philosophical basis of ecology in plain English. Contains chapter overviews and summaries. Text boxes highlight key points, examples, or controversies. Diagrams explain structure and development of theory and integration. Evaluates and relates paradigms in ecology. Illustrates philosophical issues with classic and new ecological research. **Law and Ecology** Richard O. Brooks, Ross Jones, 2017-07-05 In 1970 Earth Day was first celebrated, marking the dawn of worldwide environmental consciousness and the passing of many environmental laws. In part, these events were the result of the maturing of the science of ecology, which recognized the interdependence of the web and cycles of nature. This volume explores the relationship between ecology and environmental law, beginning with a description of the two very different disciplines. This description is followed by a history of their episodic interactions: the early period of origin, the mid-century formative period from 1950 to 1970, the initial serious period of interaction after Earth Day in 1970, and the testing of the relationship during the next two decades. Utilizing a number of case studies, examinations of the key linkage persons, legal instruments, and the migration of ecological concepts and frameworks, this book analyzes the final flowering of an ecosystem regime which embraces the connections between the

two disciplines of ecology and environmental law Concluding with an inventory of the problems posed by the relationship between the two disciplines and an agenda for future research this clearly structured comprehensive and stringent book is an essential resource for all serious scholars and students of ecology and environmental law **Teaching Methods in**

Footprints in Literature: An Excursion into Selected Nature Writings and Nature Novels Dr. Archana R. Kadiyan,2022-08-22

The book provides a comprehensive view of the environmental discourses that are found in the literary representations of the natural world The book presents an in depth analysis of the symbolic manifestations of the outer world in various genres of literature such as nature novels and nature or ecological writings It deeply captures the mutual interactions that occur between the human and the non human world that tend to influence each other s actions and processes By exploring the ecocritical leanings and tracing all the phases of Anthropocene the book takes its readers for a deep excursion into the beauteous dynamic natural and overtly spiritual world of Nature as exhibited in the writings such as Thoreau s Walden Khushwant Singh s Nature Watch and Starhawk s The Earth Path which is contrasted against the eco catastrophic world of Rachel Carson s Silent Spring An insightful and analytical journey into the world of more unique portrayals of the ecological world that tend to strike a balance between two distinct worlds the real and the imaginative the spiritual and the material as well as the natural and the man made as reflected in the nature novels George Eliot s Mill on the Floss Khushwant Singh s I Shall not Hear the Nightingale Starhawk s Fifth Sacred Thing and Ernest Callenbach s Ecotopia A Novel The book thus with its underpinning wisdom will be an interesting and more enlightening read for the critics academicians and researchers

Nature in Asian Traditions of Thought University Distinguished Research Professor J Baird Callicott,J. Baird Callicott,Roger T. Ames,1989-01-01 Here Western environmental philosophers and some of our most distinguished representatives of Asian and comparative philosophy critically consider what Asia has to offer The first section provides an ecological world view as a basis for comparison Subsequent sections include chapters by leading contemporary scholars in Chinese Japanese Indian and Buddhist thought that explore the Western perception of Asian traditions the perception that Asian philosophy is a rich conceptual resource for contemporary environmental thinkers *Darwin-Inspired Learning*

Carolyn J. Boulter,Michael J. Reiss,Dawn L. Sanders,2015-01-19 Charles Darwin has been extensively analysed and written about as a scientist Victorian father and husband However this is the first book to present a carefully thought out pedagogical approach to learning that is centered on Darwin s life and scientific practice The ways in which Darwin developed his scientific ideas and their far reaching effects continue to challenge and provoke contemporary teachers and learners inspiring them to consider both how scientists work and how individual humans read nature Darwin inspired learning as proposed in this international collection of essays is an enquiry based pedagogy that takes the professional

practice of Charles Darwin as its source Without seeking to idealise the man Darwin inspired learning places importance on active learning hands on enquiry critical thinking creativity argumentation interdisciplinarity In an increasingly urbanised world first hand observations of living plants and animals are becoming rarer Indeed some commentators suggest that such encounters are under threat and children are living in a time of nature deficit Darwin inspired learning with its focus on close observation and hands on enquiry seeks to re engage children and young people with the living world through critical and creative thinking modeled on Darwin s life and science

Nature's Economy Donald Worster,1994-06-24 Nature s Economy is a wide ranging investigation of ecology s past first published in 1994 It traces the origins of the concept discusses the thinkers who have shaped it and shows how it in turn has shaped the modern perception of our place in nature Our view of the living world is a product of culture and the development of ecology since the eighteenth century has closely reflected society s changing concerns Donald Worster focuses on these dramatic shifts in outlook and on the individuals whose work has expressed and influenced society s point of view The book includes portraits of Linnaeus Gilbert White Darwin Thoreau and such key twentieth century ecologists as Rachel Carson Frederic Clements Aldo Leopold James Lovelock and Eugene Odum

The Ethics of Nature Celia Deane-Drummond,2008-04-15 This accessible and timely book uses a Christian perspective to explore ethical debates about nature A detailed exploration of humanity s treatment of the natural world from a Christian perspective Covers a range of ethical debates including current controversies about the environment animal rights biotechnology consciousness and cloning Sets the immediate issues in the context of underlying theological and philosophical assumptions Complex scientific issues are explained in clear student friendly language The author develops her own distinctive ethical approach centred on the practice of wisdom Discusses key figures in the field including Peter Singer Aldo Leopold Tom Regan Andrew Linzey James Lovelock Anne Primavesi Rosemary Radford Ruether and Michael Northcott The author has held academic posts in both theology and plant science

Religion and Ecological Crisis Md. Abu Sayem,2022-09-02 Religion and Ecological Crisis delves into the complex relationship between religions and ecology presenting Christian and Islamic perspectives on ecological issues through the work of John Boswell Cobb and Seyyed Hossein Nasr It examines how faith traditions of the world see and respond to our current unprecedented climate change issues This is the first comparative study of Cobb and Nasr s eco religious understanding and explores how their prescriptions can contribute alternatively to techno scientific initiatives in environmental sustainability Taking Cobb s economism and Nasr s scientism as the key concepts for surveying the roots of the ecological crisis the book offers interdisciplinary and interreligious insights into the debates about ecological equilibrium

motivational awareness in human mind and about entanglements between religion and the environment This will be an insightful resource for policy makers faith leaders and for academics working in Environmental Studies and Religious Studies

Nature-based learning and development: Maximizing the returns on investment, volume II Catherine Jordan, Andrea Faber Taylor, Nancy M. Wells, Ming Kuo, Ulrich Dettweiler, 2023-11-06 **Infinite Nature** R. Bruce Hull, 2022-12-22 You would be hard pressed to find someone who categorically opposes protecting the environment yet most people would agree that the environmentalist movement has been ineffectual and even misguided Some argue that its agenda is misplaced oppressive and misanthropic a precursor to intrusive government regulatory bumbles and economic stagnation Others point out that its alarmist rhetoric and preservationist solutions are outdated and insufficient to the task of galvanizing support for true reform In this impassioned and judicious work R Bruce Hull argues that environmentalism will never achieve its goals unless it sheds its fundamentalist logic The movement is too bound up in polarizing ideologies that pit humans against nature conservation against development and government regulation against economic growth Only when we acknowledge the infinite perspectives on how people should relate to nature will we forge solutions that are respectful to both humanity and the environment Infinite Nature explores some of these myriad perspectives from the scientific understandings proffered by anthropology evolution and ecology to the promise of environmental responsibility offered by technology and economics to the designs of nature envisioned in philosophy law and religion Along the way Hull maintains that the idea of nature is social in order to reach the common ground where sustainable and thriving communities are possible we must accept that many natures can and do exist Incisive heartfelt and brimming with practical solutions Infinite Nature brings a much needed and refreshing voice to the table of environmental reform

Evolving Nature of Objectivity in the History of Science and its Implications for Science Education Mansoor Niaz, 2017-10-26 This book explores the evolving nature of objectivity in the history of science and its implications for science education It is generally considered that objectivity certainty truth universality the scientific method and the accumulation of experimental data characterize both science and science education Such universal values associated with science may be challenged while studying controversies in their original historical context The scientific enterprise is not characterized by objectivity or the scientific method but rather controversies alternative interpretations of data ambiguity and uncertainty Although objectivity is not synonymous with truth or certainty it has eclipsed other epistemic virtues and to be objective is often used as a synonym for scientific Recent scholarship in history and philosophy of science has shown that it is not the experimental data Baconian orgy of quantification but rather the diversity plurality in a scientific discipline that contributes toward understanding objectivity History of science shows that objectivity and subjectivity can be considered as the two poles of a continuum and this dualism leads to a conflict in understanding the evolving nature of objectivity The history of objectivity is nothing less than the history of science itself and the evolving and varying forms of objectivity does not mean that one replaced the other in a sequence

but rather each form supplements the others This book is remarkable for its insistence that the philosophy of science and in particular that discipline's analysis of objectivity as the supposed hallmark of the scientific method is of direct value to teachers of science Meticulously yet in a most readable way Mansoor Niaz looks at the way objectivity has been dealt with over the years in influential educational journals and in textbooks it's fascinating how certain perspectives fade while basic questions show no sign of going away There are few books that take both philosophy and education seriously this one does Roald Hoffmann Cornell University chemist writer and Nobel Laureate in Chemistry

Environmental Ethics, Ecological Theology, and Natural Selection Lisa H. Sideris, 2003 Lisa Sideris proposes a new way of thinking about the natural world an environmental ethic that incorporates the ideas of natural selection and values the processes rather than the products of nature Such an approach encourages us to take a minimally interventionist approach to nature Only when the competitive realities of evolution are faced squarely Sideris argues can we generate practical environmental principles to deal with such issues as species extinction and the relationship between suffering and sentience

Staying Alive Vandana Shiva, 1988 Examining the position of women in relation to nature the forests the food chain and water supplies the author links the violation of nature with the violation and marginalization of women in the Third World One result is that the impact of science technology and politics along with the workings of the economy itself are inherently exploitative Every area of human activity marginalizes and burdens both women and nature There is only one path Vandana Shiva suggests to survival and liberation for nature women and men and that is the ecological path of harmony sustainability and diversity She explores the unique place of women in the environment of India in particular both as its saviours and as victims of maldevelopment Her analysis is an innovative statement of the challenge that women in ecology movements are creating and she shows how their efforts constitute a non violent and humanly inclusive alternative to the dominant paradigm of contemporary scientific and development thought

Asian Perceptions of Nature Ole Bruun, Arne Kalland, 2014-02-25 This highly acclaimed bold and refreshing collection of essays takes a critical look at Asians perception of their natural environments as well as at Western views of Asia in this respect

Invasion Biology Mark A. Davis, 2009-01-29 Carefully balanced to avoid distinct taxonomic ecosystem and geographic biases the book addresses a wide range of invasive species including protists invertebrates vertebrates fungi and plants which have been studied in marine freshwater and terrestrial environments throughout the world by investigators equally diverse in their origins

The End of Nature Bill McKibben, 2014-09-03 Reissued on the tenth anniversary of its publication this classic work on our environmental crisis features a new introduction by the author reviewing both the progress and ground lost in the fight to save the earth This impassioned plea for radical and life renewing change is today still considered a groundbreaking work in environmental studies McKibben's argument that the survival of the globe is dependent on a fundamental philosophical shift in the way we relate to nature is more relevant than ever McKibben writes of our earth's environmental cataclysm addressing such core issues as the greenhouse effect acid rain

and the depletion of the ozone layer His new introduction addresses some of the latest environmental issues that have risen during the 1990s The book also includes an invaluable new appendix of facts and figures that surveys the progress of the environmental movement More than simply a handbook for survival or a doomsday catalog of scientific prediction this classic soulful lament on Nature is required reading for nature enthusiasts activists and concerned citizens alike

The Natural World and Science Education in the United States Ajay Sharma, Cory Buxton, 2018-04-04 This book focuses on the representation of nature in science education in schools in the United States Given the importance of our relationship with the nonhuman world for the fate of our planet this work gives special attention to the representation instruction and understanding of the relationship between the social and the natural world It also proposes an alternative sustainability science based conceptual framework for ecology and environmental science topics in science education which is compatible with the current social ecological understanding of life in the Anthropocene epoch
