Creating Sustainable Community Programs Mark R. Daniels, 2001-02-28 Public opinion polls consistently reveal the lack of confidence disillusionment and mistrust that citizens feel toward government Daniels and his contributors believe that the relationship between citizens and their governments can be changed by facilitating greater citizen collaboration with government particularly through local sustainable programs As the case studies show often sustainable community programs are created through grassroots movements that are initiated and managed by citizens themselves bringing them in contact with their local elected and appointed officials Unlike traditional programs that are administered by local officials on behalf of their citizens once sustainable community programs are created citizens administer their own programs in collaboration with local officials The case studies look at a variety of sustainable programs primarily in the United States that help to deal with issues such as recycling transportation microcredit site redevelopment pollution health care and hunger Creating Sustainable Community Programs is the first book on sustainable programs that is intended for an audience of public administration scholars researchers and students as well as practitioners who are searching for ways to change the relationship between citizens and their governments

Multidimensional Global Change Kirill I. Kovlevich Kondrat'ev, 1998-07 Multidimensional Global Change Kirill Ya Kondratyev Forty years of technological progress have had a catastrophic impact on the environment since this progress has been based on the ruthless exploitation of natural resources 20 percent of the fertile soil on cultivated land has been lost 20 per cent of tropical forests have been cleared desertification continues at a rate of 6 million hectares annually and deforestation amounts to 11 million hectares annually Economic estimations practically never take into account this depletion and damage to natural resources the harmful effect on human health the deprivation of future generations of those natural resources and the long term impact in the form of biospheric deformation In this text Kirill Kondratyev emphasises the extremely complex and interdisciplinary nature of multidimensional global change highlighting its principal aspects and many practical consequences economic social etc as well as the relationships between environmental problems on global continental and national scales He demonstrates that the main limiting factor of further quantitative development of humankind is the available biosphere resources and that the basic criterion of ecological well or ill being is the level of depletion of these resources The author highlights an acute social controversy of the modern world in that the level of biospheric resource consumption in industrially developed countries exceeds by far that in the Third World This disparity could be eliminated through advancements such as the decarbonisation of energy production and the development of new technologies However he shows that radical improvement of the situation can only be achieved by reducing the population number and establishing a new fair economic order He emphasises that when considering global change problems it is important to avoid exaggerations and he strikes a balance between the most gloomy predictions and more encouraging estimations Readership Professional scientists environmentalists and engineers concerned with research relating to global change and its consequences managers and senior engineers wishing to gain an insight into the problems caused by global change and undergraduate and postgraduate students of geography meteorology climatology atmospheric physics and environmental science
