Economics Through the Looking-Glass R.A. Rayman, 2019-06-04 Published in 1998 In spite of spectacular improvements in market flexibility the characteristics of the past twenty years are slow growth and high unemployment Economics Through the Looking Glass exposes the theoretical fallacy at the heart of the New Economic Orthodoxy The fallacy lies in treating the economy as a single gear machine guaranteed to operate at its full employment potential as long as it benefits from the lubricant of perfectly flexible markets in a Walrasian Utopia of continuous market clearing equilibrium Unemployment is thereby reduced to a structural problem of market imperfection As a cure for unemployment market flexibility is presumed to be adequate as a cure for inflation monetary restriction is presumed to be safe The flaw in Orthodox logic is exposed by a demonstration that a monetary economy operates as a multi gear machine Unless it is in top gear market flexibility even of Utopian perfection is not sufficient for full employment Single gear Economic Orthodoxy is shown to have developed not as a science but as a religion beginning with Adam Smith's revelation of the Law of Competition A Looking Glass journey backwards in time from Adam Smith uncovers his suppression of the Law of Circulation and exposes the dangerous delusion of Orthodox economic policy As a weapon against unemployment market flexibility is inadequate as a weapon against inflation monetary restriction is unsafe The multi gear alternative heralds the final stage of economic liberalisation deregulation of the market for money The rescue of interest rates from political or central bank interference and the control of inflation by a mechanism triggered by market forces would put an end to the Orthodox policy of maintaining unemployment above its natural market rate by misguided monetary intervention **Our Ecological Footprint** Mathis Wackernagel, William Rees, 1998-07-01 Our Ecological Footprint presents an internationally acclaimed tool for measuring and visualizing the resources required to sustain our households communities regions and nations converting the seemingly complex concepts of carrying capacity resource use waste disposal and the like into a graphic form that everyone
