Regarding institutional processes the book provides insight into the digitalization of the banking sector from a legal point of view. Traditionally banking is strongly regulated by norms and rules and this status should be maintained when new entities are entering the sector and or when new technological solutions contribute to the provision of banking services. Regarding socioeconomic processes it must be highlighted that digitalization is exerting a powerful impact on societies. One significant example among others is the increase in the financial inclusion of disadvantaged groups especially customers either underserved by the traditional financial sector or unbanked. The socioeconomic aspect however has a much greater dimension and its selected aspects are described in this book. The principal audience of the book will be scholars in the fields of banking and finance but also other related disciplines in the social sciences that are of particular relevance to the banking sector's digital transformation. This includes legal science, management and psychology. The book also targets professionals in the financial industry interested in the impact of new financial technologies on banking sectors and bank services particularly with a main focus on legal and socioeconomic dimensions. Currencies can be classified as either floating currencies or fixed currencies based on their exchange rate regime. In common usage currency sometimes refers to only paper money as in coins and currency but this is misleading. Coins and paper money are both forms of currency. In most cases each country has monopoly control over the supply and production of its own currency.
