Effects of Globalization on Education Systems and Development

Macleans A. Geo-JaJa, Suzanne Majhanovich, 2016-11-04 With its comprehensive coverage and quality this provocative book is concerned with the future of developing countries in Africa Asia and Latin America By providing in depth analysis of the economic social and educational challenges of emerging states it offers an alternative roadmap to development The authors in this collection substantiate the notion that emerging states often do not participate in policy choices related to their development when faced with universalization of curriculum and internationalization of education The authors make explicit the direct and indirect effects of globalization on educational systems social equity and the path of development In demonstrating the impact of neoliberalism or market based reforms on the developing world the authors show that education without human rights is vulnerable to negative forces of globalization and internationalization The message of the book is quite pessimistic about possibilities to widen the economic space or increase freedom unless development cooperation is made possible by Helping People Help Themselves as suggested by David Ellerman The authors note that in the past the issue of emerging states as an appendage to the world economy was a fundamental question related to colonialism but now has become a question of imperialism which needs to be examined when considering the current patterns of development

Education and Social Change Geoffrey Elliott, Chahid Fourali, Sally Issler, 2013-02-14 Education policy and practice has historically been developed within the national regional context However globalization has prompted educationalists to review their practice in the light of international influences World issues such as global warming conflict and the depletion of earth resources have also contributed to an increased awareness of the role that education can play in resolving these problems The contributors focus on how education can bring about social change while connecting with theory at the level of cultural impact and policy implications They investigate the potential for creating a transnational value system in education focusing on some key human rights issues both at home and overseas Truly international in scope this text lays the groundwork for future research by exposing the commonalities and differences in approaches to knowledge production and its dissemination drawing together contributions from a variety of cross cultural contexts

University Rankings, Diversity, and the New Landscape of Higher Education , 2019-02-18 University rankings are a relatively new phenomenon in higher education Although quite an established practice in the U S it is only within the last decade that attempts to analyse university performance have spread to the rest of the world and that we also have seen new global rankings appear rankings attempting to measure university performance beyond national borders No wonder that this trend is accompanied by a growing interest in studying rankings throughout the world This book is written as part of the effort to better understand rankings and their effects on higher education A serious approach towards university rankings implies that rankings should be analysed properly including the methods used and the indicators chosen and investigate the objectives claimed If university rankings are considered as consumer information then everyone should have an interest in basing such guidance on valid and reliable data and methodology A serious analysis should also discuss the wider implications of rankings as an emerging phenomenon in higher education Consequently the contributions to this book investigate and analyse how different rankings work how they reach their conclusions and on what data and methodology they are built Furthermore it provides a critical reflection about the impact of rankings on higher education how and in what way rankings influence policy making the structure of the sector or the internal life of the sector

Education as a Political Tool in Asia Marie Lall, Edward Vickers, 2010-06-30 This book offers a fresh and comparative approach in questioning what education is being used for and what the effects of the politicisation of education are on Asian societies in the era of globalisation Education has been used as a political tool throughout the ages and across the whole world to define national identity and underlie the political rationale of regimes In the contemporary globalising world there are particularly interesting examples of this throughout Asia ranging from the new definition of Indian national identity as a Hindu identity to contrast with Pakistan s Islamic identity to particular versions of nationalism in China Japan Singapore and Vietnam In Asia education systems have their origins in processes of state formation aimed either at bolstering self strengthening resistance to the encroachments of Western and or Asian imperialism or at furthering projects of post colonial nation building State

elites have sought to popularise powerful visions of nationhood to equip these visions with a historical back story and to endow them with the maximum sentimental charge This book explores all of these developments emphasising that education is seen by nations across Asia as elsewhere as more than simply a tool for economic development and that issues of national identity and the tolerance or lack of it of ethnic cultural or religious diversity can be at least as important as issues of literacy and access Interdisciplinary and unique in its analysis this book will be of interest to scholars of political science research in education and Asian Studies
