Building Materials Thomas C. Jester,2014-08-01 Over the concluding decades of the twentieth century the historic preservation community increasingly turned its attention to modern buildings including bungalows from the 1930s gas stations and diners from the 1940s and office buildings and architectural homes from the 1950s Conservation efforts however were often hampered by a lack of technical information about the products used in these structures and to fill this gap Twentieth Century Building Materials was developed by the U S Department of the Interior s National Park Service and first published in 1995 Now this invaluable guide is being reissued with a new preface by the book s original editor With more than 250 illustrations including a full color photographic essay the volume remains an indispensable reference on the history and conservation of modern building materials Thirty seven essays written by leading experts offer insights into the history manufacturing processes and uses of a wide range of materials including glass block aluminum plywood linoleum and gypsum board Readers will also learn about how these materials perform over time and discover valuable conservation and repair techniques Bibliographies and sources for further research complete the volume The book is intended for a wide range of conservation professionals including architects engineers conservators and material scientists engaged in the conservation of modern buildings as well as scholars in related disciplines **Shrinkage and Cooking Time of Rib Roasts of Beef of**

Designing the Forest and other Mass Timber Futures Lindsey Wikstrom,2023-03-08 If we want to continue existing on this earth an era of renewable energy and materials is urgently needed What role could mass timber with its potential to replace concrete and steel have in ensuring the planet s survival This book retraces wood s passage from stewarded seed in the soil of forests to harvested biomass to laminated walls in a living room through to its disassembly pausing at each step in the supply chain of mass timber to consider the labor and economies involved looking closely at the way wood is grown sourced and transported and its impacts on the biodiversity of the forest and the health of our ecosystems It explores why historically entrenched contexts of extractivism make such sensitive approaches difficult to cultivate across landscapes and industrial frameworks Along the way common assumptions about mass timber are debunked including its fire performance its strength and its role in carbon sequestration Having identified contemporary technical cultural and spiritual gaps preventing the transition towards a fully timber built environment it outlines how we might move forward A more sensitive species based methodology is essential with designers as choreographers of carbon transferring and trading between forest factory site and beyond This will be an important read for anyone interested in our built environment and how to design it to be non extractive especially those with an interest in architecture urbanism forests ecology and timber as well as students of architecture and design interested in the generative nature of materials and design processes Resources for Freedom
