Teichmüller Theory in Riemannian Geometry Anthony Tromba, 2012-12-06 These lecture notes are based on the joint work of the author and Arthur Fischer on Teichmüller theory undertaken in the years 1980 1986 Since then many of our colleagues have encouraged us to publish our approach to the subject in a concise format easily accessible to a broad mathematical audience However it was the invitation by the faculty of the ETH Zürich to deliver the ETH Zürich Diplom Vorlesungen on this material which provided the opportunity for the author to develop our research papers into a format suitable for mathematicians with a modest background in differential geometry We also hoped it would provide the basis for a graduate course stressing the application of fundamental ideas in geometry For this opportunity the author wishes to thank Eduard Zehnder and Jürgen Moser acting director and director of the Forschungsinstitut für Mathematik at the ETH Gisbert Wiistholz responsible for the Nachdiplom Vorlesungen and the entire ETH faculty for their support and warm hospitality This new approach to Teichmüller theory presented here was undertaken for two reasons First it was clear that the classical approach using the theory of extremal quasi conformal mappings in this approach we completely avoid the use of quasi conformal maps was not easily applicable to the theory of minimal surfaces a field of interest of the author over many years Second many other active mathematicians who at various times needed some Teichmüller theory have found the classical approach inaccessible to them
