Ecology Of Recently Deglaciaded Terrain A Geoecological Approach To Glacier Forelands:

The Ecology of Recently-deglaciaded Terrain John A. Matthews,1992-04-30 The first comprehensive review of the available information on the ecology of recently deglaciaded terrain this volume evaluates critically the methodology employed in such studies **The Ecology of Recently-deglaciaded Terrain** John A. Matthews,2008 **Review of The ecology of recently-deglaciaded terrain. A geoecological approach to glacier forelands and primary succession by J.A. Matthews. Cambridge, Cambridge University Press, 1992** R.I.L. SMITH,1992 **Geomorphology of Proglacial Systems** Tobias Heckmann,David Morche,2018-11-29 This book discusses the recession of alpine glaciers since the end of the Little Ice Age LIA which has been accelerating in the past decades It provides an overview of the research in the field presenting definitions and information about the different proglacial areas and systems A number of case studies are from the PROSA project group which encompasses the expertise of geomorphologists geologists glaciologists and geodesists The PROSA joint project High resolution measurements of morphodynamics in rapidly changing PROglacial Systems of the Alps is determined to tackle the problems of geomorphic activity on sediment export through a quantification of sediment fluxes effected by the aforementioned geomorphic processes within the forefield of the Gepatschferner glacier Central Alps Austria

Encyclopedia of Environmental Change John A Matthews,2013-12-13 Accessibly written by a team of international authors the Encyclopedia of Environmental Change provides a gateway to the complex facts concepts techniques methodology and philosophy of environmental change This three volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field The encyclopedia includes all of the following aspects of environmental change Diverse evidence of environmental change including climate change and changes on land and in the oceans Underlying natural and anthropogenic causes and mechanisms Wide ranging local regional and global impacts from the polar regions to the tropics Responses of geo ecosystems and human environmental systems in the face of past present and future environmental change Approaches methodologies and techniques used for reconstructing dating monitoring modelling projecting and predicting change Social economic and political dimensions of environmental issues environmental conservation and management and environmental policy Over 4 000 entries explore the following key themes and more Conservation Demographic change Environmental management Environmental policy Environmental security Food security Glaciation Green Revolution Human impact on environment Industrialization Landuse change Military impacts on environment Mining and mining impacts Nuclear energy Pollution Renewable resources Solar energy Sustainability Tourism Trade Water resources Water security Wildlife conservation The comprehensive coverage of terminology includes layers of entries ranging from one line definitions to short essays making this an invaluable companion for any student of physical geography environmental geography or environmental sciences **Plants of the World** Robert W. Minor,2003 Glacier Evolution in a Changing World Danilo Godone,2017-10-04 Glaciers have always played an important role in human history

and currently they are carefully observed as climate change sentinels Glacier melt rate is increasing and its mass balance is continuously negative This issue deserves accurate and in depth studies in order to adequately monitor its state This circumstance in fact endangers the water supply affecting human settlements but also creating new environments allowing the colonization by pioneer communities and the formation of new landscapes This book is subdivided into two main sections in order to deal with the two topics of worldwide research on glaciers and ecology in glacial environments In the first one Glaciers in the World several reviews and studies are collected It is an overview of glaciers their state and research carried out in different continents and contexts The second section Glacial Ecosystems focuses on the other hand on glacier environments and ecological researches

GIS and Remote Sensing Applications in Biogeography and Ecology

Andrew C. Millington, Stephen J. Walsh, Patrick E. Osborne, 2013-03-11 In recent years the conservation of tropical forests has received worldwide publicity whereas effective forest management particularly for timber extraction has attracted little attention and gained some notoriety The overall aim of the present paper was to examine how environmental micro variation in the Chiquibul Forest Reserve of Belize can influence species distribution and thereby inform management strategy The paper deals first with the background to forest management in Belize then considers the methodology used in the present study and finally assesses the preliminary results The specific objectives are 1 to assess the effects of changing scale on the variability of selected individual soil properties in forest plots within the same vegetation class and 2 to examine the variation in soil properties and tree species distribution and to integrate environmental and ecological data over a range of scales BACKGROUND Whereas the global and regional distribution of tropical forests is broadly governed by climatic and altitudinal variation individual forest tracts need to consider a range of other locally important factors to explain species distribution and change With very high species diversity tropical forests present a major challenge in the attempt to unravel controlling factors in distribution and growth Swaine et al 1987 Research that attempts to explain diversity has looked at species distribution according to a range of factors with a general recognition that soil fertility plays a significant if ill defined role Swaine 1996

Geocology: An Evolutionary Approach Richard Huggett, 2002-09-11 Animals plants and soils interact with one another with the terrestrial spheres and with the rest of the Cosmos On land this rich interaction creates landscape systems or geoecosystems Geocology investigates the structure and function of geoecosystems their components and their environment The author develops a simple dynamic systems model the brash equation to form the conceptual framework for the book suggesting an ecological and evolutionary approach Exploring internal of ecological interactions between geoecosystems and their near surface environments the atmosphere hydrosphere toposphere and lithosphere and external influences both geological and cosmic Geocology presents geoecosystems as dynamic entities constantly responding to changes within themselves and their surroundings An evolutionary view emerges of geoeological systems and the animals

plants and soils comprising them providing a new way of thinking for the whole environmental complex and the rich web of interdependencies contained therein

Mountain Landscapes in Transition Udo Schickhoff, R.B. Singh, Suraj Mal, 2021-11-02 This book compiles available knowledge of the response of mountain ecosystems to recent climate and land use change and intends to bridge the gap between science policy and the community concerned The chapters present key concepts major drivers and key processes of mountain response providing transdisciplinary orientation to mountain studies incorporating experiences of academics community leaders and policy makers from developed and less developed countries The book chapters are arranged in two sections The first section concerns the response processes of mountain environments to climate change This section addresses climate change itself past current and future changes of temperature and precipitation and its impacts on the cryosphere hydrosphere biosphere and human environment systems The second section focuses on the response processes of mountain environments to land use land cover change The case studies address effects of changing agriculture and pastoralism forest water resources management and urbanization processes landscape management and biodiversity conservation The book is designed as an interdisciplinary publication which critically evaluates developments in mountains of the world with contributions from both social and natural sciences

International Perspectives on Global Environmental Change Stephen Young, Steven Silvern, 2012-02-03 Environmental change is increasingly considered a critical topic for researchers across multiple disciplines as well as policy makers throughout the world Mounting evidence shows that environments in every part of the globe are undergoing tremendous human induced change Population growth urbanization and the expansion of the global economy are putting increasing pressure on ecosystems around the planet To understand the causes and consequences of environmental change the contributors to this book employ spatial and non spatial data diverse theoretical perspectives and cutting edge research tools such as GIS remote sensing and other relevant technologies International Perspectives on Global Environmental Change brings together research from around the world to explore the complexities of contemporary and historical environmental change As an InTech open source publication current and cutting edge research methodologies and research results are quickly published for the academic policy making communities Dimensions of environmental change explored in this volume include Climate change Historical environmental change Biological responses to environmental change Land use and land cover change Policy and management for environmental change

Consequences of Climate Change for Plant Biodiversity in High Mountain Ecosystems Angela Sierra-Almeida, Domenico Gargano, Veronica Fabiola Briceño Rodríguez, Luis Daniel Llambe, Giuseppe Fenu, David Sánchez Pescador, Fermin J. Rada, 2022-02-23

Mountain Biodiversity Christian Korner, Eva M. Spehn, 2024-11-01 This book is the result of the first global conference on mountain biodiversity and is a contribution to the International Year of Mountains 2002 The Global Mountain Biodiversity Assessment program is a Special Target Area Region project of DIVERSITAS UNESCO and UNEP Biological diversity is essential for the integrity of mountain ecosystems

and this dependency is likely to increase as environmental climate and social conditions change Steep terrain and climate and severe land use pressure cause mountain ecosystems to rank among the world's most endangered landscapes The 28 chapters in this book represent research on the biological riches in all major mountain ranges of the world and synthesize existing knowledge on mountain biodiversity from diversity of bacteria plants and animals to human diversity The book is divided into five sections an introduction providing an overview of the issues plant and animal diversity climate change and mountain biodiversity land use and conservation and a synthesis

Climate Change Juan A. Blanco, Houshang Kheradmand, 2011-09-12 This book offers an interdisciplinary view of the biophysical issues related to climate change Climate change is a phenomenon by which the long term averages of weather events i.e. temperature precipitation wind speed etc. that define the climate of a region are not constant but change over time There have been a series of past periods of climatic change registered in historical or paleoecological records In the first section of this book a series of state of the art research projects explore the biophysical causes for climate change and the techniques currently being used and developed for its detection in several regions of the world The second section of the book explores the effects that have been reported already on the flora and fauna in different ecosystems around the globe Among them the ecosystems and landscapes in arctic and alpine regions are expected to be among the most affected by the change in climate as they will suffer the more intense changes The final section of this book explores in detail those issues

Mountains: Physical, Human-Environmental, and Sociocultural Dynamics Mark A. Fonstad, 2018-12-07 Mountains have captured the interests and passions of people for thousands of years Today millions of people live within mountain regions and mountain regions are often areas of accelerated environmental change This edited volume highlights new understanding of mountain environments and mountain peoples around the world The understanding of mountain environments and peoples has been a focus of individual researchers for centuries more recently the interest in mountain regions among researchers has been growing rapidly The articles contained within are from a wide spectrum of researchers from different parts of the world who address physical political theoretical social empirical environmental methodological and economic issues focused on the geography of mountains and their inhabitants The articles in this special issue are organized into three themed sections with very loose boundaries between themes 1 physical dynamics of mountain environments 2 coupled human physical dynamics and 3 sociocultural dynamics in mountain regions This book was first published as a special issue of the Annals of the American Association of Geographers

Glaciers, Nature, Water, and Local Community in Mount Kenya Kazuharu Mizuno, Yuya Otani, 2022-03-18 This book describes the challenges for the natural environments and local communities in the future Among the high mountains of Africa only Kilimanjaro Mount Kenya and the Rwenzori Mountains are still capped with glaciers The retreating rate of these glaciers has accelerated and they are expected to disappear in the near future In the area around Mount Kenya the precipitation is generally low such that rainfall cannot stably supply water for farmlands and daily life It has

been revealed that the glacial meltwater has produced springs at the foot of the mountain It is therefore important to characterize the condition of water sources near Mount Kenya for use by local people This book discusses the relationships between the actual state of the climate and glacier shrinkage around Mount Kenya the surrounding vegetation soil and water environments and the lives of the foothill region inhabitants confronting the glacier shrinkage This book is valuable in the contemporary age when the assurance of a sustainable relationship between nature and mankind is critical Bats James S. Findley, 1995-01-26 Extensive scientific study of bats suggests that they are long lived slowly reproducing animals adapted to relatively stable environments As such they might be expected to exist in communities heavily influenced by biotic interactions This book begins with an overview of bat biology including their systematic diversity and methodological problems in bat research This is followed by examples of local bat community surveys from the major biogeographic regions The evidence bearing upon resource limitation and competition in bats is reviewed Then patterns in species richness taxonomic packing biomass numerical density trophic and morphological diversity are described The relevance of these to the nature of bat communities is examined Major habitats and their histories are shown to be powerful predictors of important aspects of bat community structure **The Ecology of Bird Communities** John A. Wiens, 1989 The two volumes of John Wiens Ecology of Bird Communities first published in 1992 are recognised as having applications and importance beyond the study of birds to the wider study of ecology in general The books contain a detailed synthesis of our understanding of the patterns of organisation of bird communities and of the factors that may determine them drawing from studies from all over the world The author however does more than simply review findings in bird community ecology By emphasizing how proper logic and methods have or have not been followed and how different viewpoints have developed historically and have led to controversy he extends the scope of these books far beyond the study of birds Volume 1 Foundations and Patterns explores why avian community ecologists ask the questions they do and what philosophical and methodological approaches they have used to answer such questions Most of the book is devoted to a critical evaluation of what is known about the nature and organisation of bird communities *The Ecology of Bird Communities: Volume 1, Foundations and Patterns* John A. Wiens, 1989-09-14
