Global Environmental Benefits Of Land Degradation Control On Agricultural Land:

The Global Environmental Benefits of Land Degradation Control on Agricultural Land Stefano Pagiola, 1999-01-01 This book focuses on the global effects of land degradation but emphasizes other important levels of land degradation at the field level it may result in reduced productivity at the national level it may cause flooding and sedimentation and at the global level it can contribute to climate changes damaging bio diversity and international waters The effects on climate changes are explored and the report questions the extent to which land degradation on agricultural land affects climate change Does it increase emissions of greenhouse gases Does it affect land s capacity to serve as a carbon sink Can appropriate management enhance both land s productivity and its capacity to store carbon The carbon cycle in soils is analyzed indicating land degradation is likely to reduce the ability of soils to serve as carbon sink and release stored carbon into the atmosphere and bio diversity effects are likely to be adverse Global benefits of land degradation control include afforestation to allow increased carbon sequestration and provide adequate bio diversity habitats and community based wildlife management can provide alternatives to some marginal areas Although integrating global dimensions into land degradation control projects may reverse the field level or national problems it is causing difficulties and constraints will likely contribute to the failure of these projects

Prevention of Land Degradation, Enhancement of Carbon Sequestration and Conservation of Biodiversity Through Land Use Change and Sustainable Land Management with a Focus on Latin America and the Caribbean Food and Agriculture Organization of the United Nations, 1999-01-01 The objective of IFAD FAO consultation was to bring together experts in order to review the state of the art knowledge in carbon sequestration for the land management programmes IFAD and FAO in Latin America and the Caribbean The main objectives addressed were how

to stabilize the atmospheric concentration of CO₂ how to increase agricultural productivity and reduce rural poverty in view of the Global Mechanism for Desertification Convention how to activate the flow of new funds for the benefit of Convention implementation through carbon sequestration i.e its binding and neutralisation It is believed that carbon stock in soils is either stable or increasing and that it is was a major source of global carbon emission a major cause of global climate change

Response to Land Degradation E M Bridges,2019-04-24 This work is intended for advanced readers interested in methods of sustainable land management the prevention and control of land degradation It offers a coherent view of the situation concerning land degradation and the human response to the problem It is generally recognized that technological solutions alone cannot solve the problems of land degradation This book discusses the role of land use and land management policies programmes insitutional innovations and economic incentives for the control and prevention of land degradation Special attention is given to legal issues at the international level and in individual countries

Land Degradation A.J. Conacher,2013-12-11 This book contains selected contributions from the Sixth Meeting of the International Geographical Union s Commission on Land Degradation and Desertification held in Perth Australia in September 1999 Collectively these contributions explicitly seek to understand not only the mechanisms responsible for the problem of land degradation but their social and economic implications the means of overcoming the problems and the policy instruments whereby remedial measures may be implemented This breadth of approach is both distinctive and essential if the problems are to be tackled effectively The authorship comprises of specialists mostly geographers from universities research organizations and government agencies who provide a truly international perspective with contributions from Iceland to Australia and from the USA to Japan Audience The book presents current research findings which will be of particular benefit to professionals and practitioners as well as researchers and tertiary level educationalists who are involved with land degradation

Linkages Between Land Management, Land Degradation, and Poverty in Sub-Saharan Africa Nkonya, Ephraim,Pender, John,Kaizzi, Kayuki C.,Kato, Edward,Mugarura, Samuel,Ssali, Henry,Muwonge, James,2008-01-01 Most African countries strive for both poverty reduction and sustainable land management yet information on the exact relationship between these goals is limited This report seeks to fill the gap by demonstrating a strong linkage between poverty and land management Using Uganda as a case study the authors show that certain policies such as investments in soil and water conservation and agroforestry may simultaneously increase productivity and reduce poverty and land degradation Other strategies including development of rural roads non farm activities and rural finance may reduce poverty without significantly affecting productivity or land management Some policies however will likely involve trade offs among different goals and will need to have their negative impacts minimized Those in government NGOs the private sector or academia who are concerned about sustainably reducing poverty in Sub Saharan Africa will benefit from this analysis of how to pursue these key development goals

Climate and Land Degradation Ndegwa Ndiang'ui,2007-08-28 Based on an International Workshop held in Arusha

Tanzania this book presents state of the art papers real world applications and innovative techniques for combating land degradation It offers recommendations for effectively using weather and climate information for sustainable land management practices *A Guide to the World Bank* ,2003 The World Bank Group works in more than 100 developing economies and is one of the world s largest sources of development assistance In 2002 the institution provided US 19 5 billion in loans to its client countries This guide reviews the organisation s history objectives and operations and looks at the five institutions that make up the World Bank Group the International Bank for Reconstruction and Development IBRD the International Development Association IDA the International Finance Corporation IFC the Multilateral Investment Guarantee Agency MIGA and the International Centre for Settlement of Investment Disputes ICSID

The Economics of Soil Productivity in Sub-Saharan Africa Food and Agriculture Organization of the United Nations,2001-01-01 This study examines the current and potential role of economics in soil productivity in sub Saharan Africa After examining the status of soil productivity and the contribution of conventional economic analyses it considers more innovative approaches that enable economics to play a greater role in the planning and evaluation of soil productivity enhancing measures at farm national and global level In the past economics has tended to focus on one factor at a time but many factors affect soil productivity Decisions policies and their impact call for a more integrative participatory analytical approaches capable of weighing various aspects simultaneously This study highlights how economics can respond to this challenge through the a application of fresh concepts e g natural capital and specific techniques e g multi criteria analysis green accounting

Community Innovations in Sustainable Land Management Maxwell Mudhara,Saa Dittoh,Mohamed Sessay,William Critchley,Sabina Di Prima,2016-06-23 It is increasingly recognized that land can be managed most sustainably through involving local communities This book highlights the potential of a new methodology of uncovering and stimulating community initiatives in sustainable land management in Africa Analyses of four contrasting African countries Ghana Morocco South Africa and Uganda show that as communities directly face the challenges of land degradation they are likely to develop initiatives themselves in terms of sustainable land management These initiatives or innovations may be more appropriate and sustainable than those emanating from research stations located far from the communities The book describes the rationale of the approach used the set of steps followed how the project managed to engage the communities to understand the importance of the activities they were undertaking and how they were stimulated to improve and extend their initiatives and innovativeness Examples covered include soil fertility community forestry afforestation water invasive species and grazing land management Central to the book is the way communities and scientists interacted between the four countries and learnt from each other The book also shows how the initiatives were outscaled locally

Land Quality, Agricultural Productivity, and Food Security Keith Daniel Wiebe,2003-01-01 Action is needed to fight poverty by sustaining the environment and the use of natural resources Land Quality Agricultural Productivity and Food Security explores a range of factors driving food

security The book offers an assessment to link quality of the available land resources with productivity of land and the ability to ensure food security It offers a mixture of broad scale assessments across the globe with detailed case studies deepening our understanding of economics and decision making mechanisms It is recommended to researchers as well as actors in the private and public domain who are keen to improve their understanding of the appropriate actions that ensure food security in the decade to come Floor Brouwer Agricultural Economics Research Institute LEI The Hague The Netherlands Land quality and land degradation affect agricultural productivity and food security but quantifying these relationships has been difficult Data are extremely limited and outcomes are sensitive to the choices that farmers make The contributors to this book including soil scientists geographers and economists analyse data on soils climate land cover agricultural inputs and outputs and a variety of socio economic factors to provide new insights into three key issues the extent to which differences in land quality generate differences in agricultural productivity across countries how farmers responses to differences or changes in land quality are influenced by economic environmental and institutional factors and whether land degradation over time threatens productivity growth and food security at local regional and global levels *World Agriculture: Towards 2015/2030* Jelle Bruinsma, 2017-09-25 This report is FAO s latest assessment of the long term outlook for the world s food supplies nutrition and agriculture It presents the projections and the main messages The projections cover supply and demand for the major agricultural commodities and sectors including fisheries and forestry This analysis forms the basis for a more detailed examination of other factors such as nutrition and undernourishment and the implications for international trade The report also investigates the implications of future supply and demand for the natural resource base and discusses how technology can contribute to more sustainable development One of the report s main findings is that if no corrective action is taken the target set by the World Food Summit in 1996 that of halving the number of undernourished people by 2015 is not going to be met Nothing short of a massive effort at improving the overall development performance will free the developing world of its most pressing food insecurity problems The progress made towards this target depends on many factors not least of which are political will and the mobilization of additional resources Past experience underlines the crucial role of agriculture in the development process particularly where the majority of the population still depends on this sector for employment and income *Water and Cereals in Drylands* Parviz Koochafkan, Bobby Alton Stewart, 2008 First Published in 2008 Routledge is an imprint of Taylor Francis an informa company **On-Site and Off-Site Long-Term Economic Impacts of Soil Fertility Management Practices: The Case of Maize-Based Cropping Systems in Kenya** Ephraim Nkonya, Patrick Gicheru, Johannes Woelcke, Barrack Okoba, Daniel Kilambya, and Louis N. Gachimbi, **Extending Schumacher's Concept of Total Accounting and Accountability into the 21st Century** Kala Saravanamuthu, 2009-03-23 Intends to posit Schumacher s Middle Way thinking in the context of growing concerns about global warming and climatic changes and teases out its implications for holistic accountability by introducing readers to the

science of climate change and its implications for managing natural resources **Regenerative Agriculture** Amitava Rakshit, Manoj Parihar, Vijay Singh Meena, Purushothaman Abhilash, Prakash Kumar Jha, Deepranjan Sarkar, 2024-05-09 This book aims to focus on the current state of knowledge and scientific advances about the complex and intertwined issues of regenerative farming as a transformative solution for offsetting the disastrous climate effects of burning fossil fuels and impairments of natural resource bases. Regenerative agriculture advocates no till practices, planting cover crops, integrating livestock and crop production, improving animal welfare practices, improving the social and economic well-being of communities, sequestering carbon, improving soil health, and increasing yields and profit with a positive impact on food access or food safety regardless of farm size. This book examines the innovations that will equip agriculture to cope with the competing challenges of addressing food and nutrition security, improving livelihoods, combatting climate change, and sustainably managing natural resources. The scope of this book extends to agricultural scientists, students, consultants, site owners, industrial stakeholders, regulators, and policymakers.

Prospects for Soil Regeneration and Its Impact on Environmental Protection Sesan Abiodun Aransiola, Babafemi Raphael Babaniyi, Adejoke Blessing Aransiola, Naga Raju Maddela, 2024-02-26 Soil is a complex system of inorganic and organic materials, living organisms, water, and air. It is home to more than one trillion species of microorganisms. Soil also plays an important role in the global carbon cycle. Because plants absorb carbon from the atmosphere, convert it to plant tissue, and return it to the soil as plant residue, soils globally act as the world's largest sink of active carbon. Soil has a role to play in food production and safety. Soil contamination undermined by modern agricultural practices that deplete soil carbon stocks. Anthropogenic greenhouse gas emissions have been raising recorded temperatures since the Industrial Revolution. Greenhouse gas emissions from agriculture, forestry, and fisheries have almost doubled in the last 50 years and will increase by 30% by 2050 given the current trend. The primacy of arresting climate change is nowhere more evident than the adoption of 195 countries of the first legally binding global climate deal at the Paris Climate Conference in 2015. With atmospheric carbon dioxide (CO₂) reaching 400 parts per million in 2016, soils can be an ally in bringing the CO₂ level down to a sustainable level if protected for regeneration. Soil protection and regeneration is a technique that involves the conservative rehabilitation of soil ecosystem and farmland. This technique focuses on top soil regeneration, improving the water cycle, supporting biosequestration, enhancing ecosystem services, increasing biodiversity, strengthening the vitality and health of farm soil, and increasing resilience to climate change and landscape. Environmental protection not only improves soil health, productivity, and resilience to weather extremes, raising farm yields and income while strengthening regional food security in the face of a changing climate, but can also form part of a region's broader climate strategy. This book is timely as more studies and reviews need to be reported about regenerating global polluted soil and the impacts on the environment, the benefit of both biotic and abiotic structure, thereby creating more awareness of environmental protection and sustainability. Thus, this book presents a vista to research on regeneration of lost resources in

the soil and its impacts on the environment *Sustainable Development in a Dynamic World* Zmarak Shalizi, 2003 The World Development Report 2003 addresses how to lift from poverty the three billion people now living in severe deprivation It also explores how to improve the quality of life for everybody today and for the two billion more who will join mankind in the next thirty years Substantial increases in growth and productivity will be necessary to achieve this goal The current scale of economic activity and speed of change is such that ecosystem and social structures cannot keep up The Report puts forth two main messages the first point is that enhancing prosperity and reducing poverty requires better care of the planet's ecosystem and social fabric And secondly that stronger collective action at all levels from local to global is essential for generating and scaling up the institutions that can transform growth **Soil Degradation and Restoration in Africa**

Rattan Lal, B. A. Stewart, 2019-07-09 Soil degradation is a widespread problem in Africa resulting in decreased agricultural productivity while demand for food continues to increase Degradation is caused by accelerated erosion acidification contamination depletion of soil organic matter and plant nutrients and salinization The major cause of soil degradation in Africa is uncontrolled and excessive grazing in the savanna regions followed by deforestation and the use of inappropriate and extractive farming practices Perpetual neglect of the health of soils in Africa can exacerbate the already serious problems of food and nutritional insecurity and environmental degradation Food and nutritional security of the growing population of Africa can only be achieved if degraded soils are restored and soils of agroecosystems are managed prudently and sustainably Ignoring soils and taking the fragile finite and precious soil resources for granted is the principal cause of poverty hunger and environmental degradation The downward spiral must be reversed through soil restoration measures based on translating science into action This book describes the soils of Africa processes of soil degradation extent and severity of soil degradation and the impacts of degradation processes on food and nutritional security Features Explores the extent and severity of soil degradation in Africa Analyzes the cause effect relationship between anthropogenic activities and soil degradation Reviews processes of soil degradation in Africa including erosion salinization nutrient depletion and decline of soil organic matter Addresses the effect of climate change on soil degradation in Africa Explains how soil degradation causes food and nutritional insecurity Part of the Advances in Soil Sciences series this volume is specifically devoted to the processes and factors that cause soil degradation and the challenges and potential for remediation and restoration of soil health in Africa Land Degradation Neutrality: Achieving SDG 15 by Forest Management Pankaj Panwar, Gopal

Shukla, Jahangeer A. Bhat, Sumit Chakravarty, 2022-10-18 This edited book covers all aspects of forest deforestation and degradation in detail and their link to land degradation Poor natural resource management is often a contributory factor in the depletion of resources particularly like degradation of land which hinders the goals to achieve land degradation neutrality LDN Sustainable Development Goal SDG target 15.3 states By 2030 combat desertification restore degraded land and soil including land affected by desertification drought and floods and strive to achieve a land degradation neutral world

To achieve the set goals a comprehensive multidirectional approach is required involving policymakers field functionaries researchers and above all educators The book compiles the field experiences and wisdom of some of the best researchers and authors working in the field of land degradations for quite a long time The objective of the book is to disseminate the status of land degradation the importance of achieving land degradation and share success stories of reclaiming Land degradation and suggests means and ways of achieving land degradation neutrality This book act as a repository of knowledge on Land degradation neutrality for students researchers and practitioners and policy planners
