Global Smoothness and Shape Preserving Interpolation by Classical Operators Sorin G. Gal, 2006-09-10 This monograph examines and develops the Global Smoothness Preservation Property GSPP and the Shape Preservation Property SPP in the field of interpolation of functions The study is developed for the univariate and bivariate cases using well known classical interpolation operators of Lagrange Gr nwald Hermite Fej r and Shepard type One of the first books on the subject it presents interesting new results alongwith an excellent survey of past research Key features include potential applications to data fitting fluid dynamics curves and surfaces engineering and computer aided geometric design presents recent work featuring many new interesting results as well as an excellent survey of past research many interesting open problems for future research presented throughout the text includes 20 very suggestive figures of nine types of Shepard surfaces concerning their shape preservation property generic techniques of the proofs allow for easy application to obtaining similar results for other interpolation operators This unique well written text is best suited to graduate students and researchers in mathematical analysis interpolation of functions pure and applied mathematicians in numerical analysis approximation theory data fitting computer aided geometric design fluid mechanics and engineering researchers *Shape-Preserving*

Covachev, 2020-05-18 No detailed description available for Proceedings of the First International Colloquium on Numerical Analysis **Approximation by Max-Product Type Operators** Barnabás Bede, Lucian Coroianu, Sorin G. Gal, 2016-08-08 This monograph presents a broad treatment of developments in an area of constructive approximation involving the so called max product type operators The exposition highlights the max product operators as those which allow one to obtain in many cases more valuable estimates than those obtained by classical approaches The text considers a wide variety of operators which are studied for a number of

interesting problems such as quantitative estimates convergence saturation results localization to name several Additionally the book discusses the perfect analogies between the probabilistic approaches of the classical Bernstein type operators and of the classical convolution operators non periodic and periodic cases and the possibilistic approaches of the max product variants of these operators These approaches allow for two natural interpretations of the max product Bernstein type operators and convolution type operators firstly as possibilistic expectations of some fuzzy variables and secondly as bases for the Feller type scheme in terms of the possibilistic integral These approaches also offer new proofs for the uniform convergence based on a Chebyshev type inequality in the theory of possibility Researchers in the fields of approximation of functions signal theory approximation of fuzzy numbers image processing and numerical analysis will find this book most beneficial This book is also a good reference for graduates and postgraduates taking courses in approximation theory

Mathematics of Fuzzy Sets and Fuzzy Logic Barnabas Bede, 2012-12-14 This book presents a mathematically based introduction into the fascinating topic of Fuzzy Sets and Fuzzy Logic and might be used as textbook at both undergraduate and graduate levels and also as reference guide for mathematician scientists or engineers who would like to get an insight into Fuzzy Logic Fuzzy Sets have been introduced by Lotfi Zadeh in 1965 and since then they have been used in many applications As a consequence there is a vast literature on the practical applications of fuzzy sets while theory has a more modest coverage The main purpose of the present book is to reduce this gap by providing a theoretical introduction into Fuzzy Sets based on Mathematical Analysis and Approximation Theory Well known applications as for example fuzzy control are also discussed in this book and placed on new ground a theoretical foundation Moreover a few advanced chapters and several new results are included These comprise among others a new systematic and constructive approach for fuzzy inference systems of Mamdani and Takagi Sugeno types that investigates their approximation capability by providing new error estimates 1998 International Conference on Image Processing : Proceedings, 1998 Patch-Based Techniques in Medical Imaging Guorong Wu, Pierrick Coupé, Yiqiang Zhan, Brent Munsell, Daniel Rueckert, 2016-01-07 This book constitutes the thoroughly refereed post workshop proceedings of the First International Workshop on Patch based Techniques in Medical Images Patch MI 2015 which was held in conjunction with MICCAI 2015 in Munich Germany in October 2015 The 25 full papers presented in this volume were carefully reviewed and selected from 35 submissions The topics covered are such as image segmentation of anatomical structures or lesions image enhancement computer aided prognostic and diagnostic multi modality fusion mono and multi modal image synthesis image retrieval dynamic functional physiologic and anatomic imaging super pixel voxel in medical image analysis sparse dictionary learning and sparse coding analysis of 2D 2D t 3D 3D t 4D and 4D t data **Computational Science and Its Applications - ICCSA 2006** Osvaldo Gervasi, Vipin Kumar, C.J. Theory and Applications* Bernd Reusch, 2003-06-30 Ten years of Fuzzy Days in Dortmund What started as a relatively small workshop in 1991 has now become one of the best known smaller conferences on Computational Intelligence in the world It fact it was to my best knowledge the rst conference to use this term in 1994 although I confess that another larger conference was announced rst and the trade mark Computational Intelligence was not coined in Dortmund I believe that the success of this conference is grounded on the quality of its reviewed and invited papers as well as its good organization From the beginning we have sent every paper anonymously to ve referees and we have always accepted only around 50% of the papers sent in This year it was a little less than that I would like to thank everybody who helped us by considering Dortmund s Fuzzy Days as the conference at which to appear I know that among the stracts not accepted there were some quite good ones but we were restricted to a xed number I also know that referees do a good job but cannot always judge wisely from abstracts Hence my apologies to those who did not make it this year Please try again I would like to point out that our conference also has a good regional re tation I am grateful to the City of Dortmund its Lord Mayor Dr Langemeyer the Dortmund project the DFG Deutsche Forschungsgemeinschaft the KVR Kommunalverband Ruhrgebiet the Martin Schmei er Stiftung and the C line AG Quantum GmbH for their valuable support Revue D'analyse Numérique Et de Théorie de L'approximation, 1999
