Global Warming and Social Innovation Andre Faaij, David Jager, Marcel Kok, 2013-06-17 Societies need to reduce emissions of greenhouse gases by 80 per cent in order to counter the risks of climate change This study envisions a climate neutral society one where the output of polluting gases is minimised by social innovations set up in households by local authorities through developments in information and communications technologies and dematerialization and through the shift towards product service systems and emissions trading The work discusses the possibilities for steering and orchestrating this long term transition towards a climate friendly society mapping paths through current dilemmas in climate policy and exploring the legal issues of making this transition

Risk and Social Theory in Environmental Management Thomas Measham, Stewart Lockie, 2012-05-09 Risk and Social Theory in Environmental Management marks a timely contribution given that environmental management is no longer just about protecting pristine ecosystems and endangered species from anthropogenic harm it is about calculating and managing the risks to human communities of rapid environmental and technological change Firstly the book provides a solid foundation of the social theory underpinning the nature of risk then presents a re thinking of key concepts and methods in order to take more seriously the biophysical embeddedness of human society Secondly it presents a rich set of case studies from Australia and around the world drawing on the latest applied research conducted by leading research institutions In so doing the book identifies the tensions that arise from decision making over risk and uncertainty in a contested policy environment and provides crucial insights for

addressing on ground problems in an integrated way *Climate Change and Sustainable Development* Anil

Sustainable Energy Consumption and Society David L. Goldblatt, 2006-03-30 Origin of this book In 1998 the Swiss Federal Institute of Technology ETH initiated the 2000 Watt Society a University wide research program meant to help Switzerland realize a dramatic reduction in its future energy use A project within the initiative Sustainability in the ETH domain the 2000 Watt per capita Society sought to promote the gradual introduction of a way of living and working that requires only one third of current energy consumption but 1 2 still delivers an improved quality of life Two thousand watts is roughly the current world average per capita energy consumption it was the average level in Switzerland in the 1950s it is some three times less than current 3 Swiss usage and reducing to that level again in concert with other industrialized nations would greatly facilitate stabilization of atmospheric carbon dioxide CO levels in the long term given projections about world 2 population growth and exploitable energy resources Imboden 1999 1 http://www.novatlantis.ch/frames_e.html 2 A watt is a power term equivalent to 1 joule second Non engineers generally prefer to think of 2000 watts per capita in terms of energy use per unit time such as joules second or kilowatt hours hour For Switzerland 2000 watts per capita is equivalent to a primary annual energy consumption of about 65 gigajoules 65 billion joules per capita Although less generally communicative the 2000 watt name is clean and trim and since it has stuck we will use it throughout the book *Natural Resources Management: Concepts, Methodologies, Tools, and Applications* Management Association, Information Resources, 2016-09-08 The perseveration of our natural environment has become a critical objective of environmental scientists business owners and citizens alike Because we depend on natural resources to survive uncovering methods for preserving and maintaining these resources has become a focal point to ensure a high quality of life for future generations Natural Resources Management Concepts Methodologies Tools and Applications emphasizes the importance of land soil water foliage and wildlife conservation efforts and management Focusing on sustainability solutions and methods for preserving the natural environment this critical multi volume research work is a comprehensive resource for environmental conservationists policymakers researchers and graduate level students interested in identifying key research in the field of natural resource preservation and management *Handbook of Research on Climate Change Impact on Health and Environmental Sustainability* Dinda, Soumyananda, 2015-11-05 Climate change is not only one of the greatest threats to modern civilization it is also a great challenge to economic development in the 21st century Global warming can lead to periods of both drought and intense rain causing crops to fail and ruining the livelihoods of many in underdeveloped countries The Handbook of Research on Climate Change Impact on Health and Environmental Sustainability is an authoritative reference source that offers a comprehensive and timely analysis of various aspects of global warming and its consequences Featuring such topics as assessment of and adaption to climate change water and its socio economic impact the environmental effects of climate

change on human health and the mitigation of climate change on both a local and global level this expansive handbook is an essential reference source for students researchers academicians engineers government executives and other practitioners looking to make a difference in the treatment of our environment This publication features timely research on subjects including but not limited to climate change and its effect on both urbanization and the trade competitiveness of different regions water related diseases flourishing due to climate change health risks and rethinking health service provision losses from natural disasters farmers views on the environment drought management policies groundwater resource management trends in long term rainfall fishery management and productivity preserving biodiversity and sustainable forest use

Peri-urban Water and Sanitation Services Mathew Kurian, Patricia McCarney, 2010-08-17 More than 2.6 billion people in the developing world lack access to safe water and sanitation service The Millennium Development Goal's MDG target is to halve the number of people without access to a sustainable source of water supply and connection to a sewer network by 2015 That target is unlikely to be met If there is anything that can be learnt from European experience it is that institutional reform occurs incrementally when politically enfranchised urban populations perceive a threat to their material well being due to contamination of water sources

Renewable Energy Governance Evanthie Michalena, Jeremy Maxwell Hills, 2013-11-29 This book focuses on Renewable Energy RE governance the institutions plans policies and stakeholders that are involved in RE implementation and the complexities and challenges associated with this much discussed energy area Whilst RE technologies have advanced and become cheaper governance schemes rarely support those technologies in an efficient and cost effective way To illustrate the problem global case studies delicately demonstrate successes and failures of renewable energy governance RE here is considered from a number of perspectives as a regional geopolitical agent as a tool to meet national RE targets and as a promoter of local development The book considers daring insights on RE transitions governmental policies as well as financial tools such as Feed in Tariffs along with their inefficiencies and costs This comprehensive probing of RE concludes with a treatment of what we call the Mega What question who is benefitting the most from RE and how society can get the best deal After reading this book the reader will have been in contact with all aspects of RE governance and be closer to the pulse of RE mechanisms The reader should also be able to contribute more critically to the dialogue about RE rather than just reinforce the well worn adage that RE is a good thing to happen

Climate Change and Sustainable Cities Hugo Priemus, Simin Davoudi, 2016-04-08 Climate change has demonstrated perhaps more than any other environmental concerns the complexities of the human nature interrelationship and the need for embedding a far greater environmental consciousness into our social values and norms A drastic reduction in global greenhouse gas emissions requires a transition to low carbon cities This demands a better understanding of the interactions between social technical and spatial processes which constitute cities The aim of this book is to explore these interactions and urge urban planners and other built environment professionals to revisit some of their traditional concepts methods and

ways of thinking about what constitutes a good city and according to whose priorities The book brings together nine contributions ranging from broad overviews to sector specific analysis paying particular attention to the role of urban planning Contributors cover climate change mitigation and adaptation deal with different scales of analysis ranging from international and European to national and city perspectives and discuss a range of policy sectors including housing transport energy sea level rise as well as pathways for climate policy implementation The diversity of the contributions is itself a reflection of the multitude of climate change concerns that preoccupy researchers policy makers and practitioners This book was published as a special issue of European Planning Studies Better City, Better Life Lin Chau Ming, Wenhua Wang, Renata Cardoso Magagnin, 2016-09-06 The book *Better City Better Life* brings together papers from different disciplines of researchers who have in common the theme Sustainability This book is intended to reflect on current planning strategies and growth of cities from the perspective of sustainable development These reflections approach the spatial economic political social cultural and environmental model This book is divided into the following themes sustainable cities environmental sustainability and social and economic aspects of sustainability *Better City Better Life* is directed to researchers graduate students and professionals in the fields related to Architecture and Urban Planning Urban and Regional Planning Engineering Biology Ecology and related fields It is expected that the presented research can contribute to the training of these professionals Culture, Space and Climate Change Thorsten Heimann, 2018-11-19 Ways of handling climate change vary worldwide Differences can be observed in the perception of potential threats and opportunities as well as in the appraisal of adequate coping strategies Collective efforts often fail not because of technical restrictions but as a result of social and cultural differences between the actors involved Consequently there is a need to explore in greater depth those zones of cultural friction which emerge when actors deal with climate change This book examines how cultural differences in the handling of climate change can be described and explained The work develops the concept of culture as relational space elaborates explanatory approaches and investigates them by surveying more than 800 actors responsible for spatial development of the European coastal regions in the Netherlands Germany Denmark and Poland In doing so this book engages with debates on cultural globalisation in which the attachment of culture to place is increasingly being questioned Adopting the approach of culture as relational space allows possible cultural formations to be examined across diverse fields of application from the local to the global scale In addition the book investigates how far different value orientations beliefs and identities can explain diverse perceptions of problems and opportunities right up to preferences for climate mitigation and adaptation measures Providing comprehensive insights into the diverse zones of cultural friction which scholars and practitioners face when handling climate change locally and globally this book will be of great interest to those studying climate change environmental sociology and sustainable planning *The Social and Behavioural Aspects of Climate Change* Pim Martens, Chiung Ting Chang, 2017-09-08 Over the past few years and certainly since the publication of the Stern Report

there has been increasing recognition that climate change is not only an environmental crisis but one with important social and economic dimensions There is now a growing need for multi disciplinary research and for the science of climate change to be usefully translated for policy makers Until very recently scientific and policy emphasis on climate change has focused almost exclusively on mitigation efforts mechanisms and regulations to reduce greenhouse gas emissions The success of such efforts to date is debatable In fact the impact of ever more stringent emission control programmes could potentially have enormous social consequences Little effort has been expended on the exploration of a systematic evaluation of climate stabilization benefits or the costs of adapting to a changed climate let alone attempting to integrate different approaches There is an increasing recognition that the key actors in the climate crisis also need to be preparing for change that is unavoidable This has resulted in a greater consideration of vulnerability and adaptation The book based on the research programme Vulnerability Adaptation and Mitigation VAM which ran from 2004 to 2010 funded by the Netherlands Organisation for Scientific Research NWO presents a cluster of case studies of industries communities and institutions which each show how vulnerability adaptation and mitigation analyses can be integrated using social behavioural sciences Each chapter makes specific recommendations for the studied industry sector community or institution analyses the latest research developments of the field and identifies priorities for future research The book argues that the inherent complexity of climate change will ultimately require a much more integrated response both scientifically to better understand multiple causes and impacts as well as at the scientific policy interface where new forms of engagement between scientists policy makers and wider stakeholder groups can make a valuable contribution to more informed climate policy and practice The book is particularly timely as the scientific research and policy debate is shifting from one of problem framing to new agendas that are much more concerned with implementation the improvement of assessment methodologies from a multi disciplinary perspective and the reframing of current scientific understanding towards mitigation adaptation and vulnerability A critical element in responding to the climate change challenge will be to ensure the translation of these new scientific insights into innovative policy and practice on the ground This book provides some fundamental elements to answer this need The Social and Behavioural Aspects of Climate Change Linking Vulnerability Adaptation and Mitigation will be essential reading for social science researchers and policy managers in the area of climate change as well as for those who want to know what the social and behavioural sciences can contribute toward coping with climate hazards NGOs law firms and businesses in the energy sector or other climate related fields will also find the book of great value

Environmental Politics and Deliberative Democracy Karin Bäckstrand, 2010-01-01 This important new book provides an excellent critical evaluation of new modes of governance in environmental and sustainability policy The multidisciplinary team of contributors combine fresh insights from all levels of governance all around a carefully crafted conceptual framework to advance our understanding of the effectiveness and legitimacy of new types of steering including networks public private partnerships

and multi stakeholder dialogues This is a crucial contribution to the field Frank Biermann VU University Amsterdam The Netherlands Can new modes of governance such as public private partnerships stakeholder consultations and networks promote effective environmental policy performance as well as increased deliberative and participatory quality This book argues that in academic inquiry and policy practice there has been a deliberative turn manifested in a revitalized interest in deliberative democracy coupled with calls for novel forms of public private governance By linking theory and practice the contributors critically examine the legitimacy and effectiveness of new modes of governance using a range of case studies on climate forestry water and food safety policies from local to global levels Environmental Politics and Deliberative Democracy will appeal to scholars both advanced undergraduate and postgraduate as well as researchers of environmental politics international relations environmental studies and political science It will also interest practitioners involved in the actual design and implementation of new governance modes in areas of sustainable development food safety forestry and climate change

Grid Integration of Electric Vehicles in Open Electricity Markets Qiuwei Wu, 2013-05-23 Presenting the policy drivers benefits and challenges for grid integration of electric vehicles EVs in the open electricity market environment this book provides a comprehensive overview of existing electricity markets and demonstrates how EVs are integrated into these different markets and power systems Unlike other texts this book analyses EV integration in parallel with electricity market design showing the interaction between EVs and differing electricity markets Future regulating power market and distribution system operator DSO market design is covered with up to date case studies and examples to help readers carry out similar projects across the world With in depth analysis this book describes the impact of EV charging and discharging on transmission and distribution networks market driven EV congestion management techniques for example the day ahead tariff based congestion management scenario within electric distribution networks optimal EV charging management with the fleet operator concept and smart charging management EV battery technology modelling and tests the use of EVs for balancing power fluctuations from renewable energy sources looking at power system operation support including frequency reserve power regulation and voltage support An accessible technical book for power engineers and grid distributed systems operators this also serves as a reference text for researchers in the area of EVs and power systems It provides distribution companies with the knowledge they need when facing the challenges introduced by large scale EV deployment and demonstrates how transmission system operators TSOs can develop the existing system service market in order to fully utilize the potential of EV flexibility With thorough coverage of the technologies for EV integration this volume is informative for research professors and graduate students in power systems it will also appeal to EV manufacturers regulators EV market professionals energy providers and traders mobility providers EV charging station companies and policy makers Risk, Uncertainty and Policy Patrick Brown, Anna Olofsson, 2017-10-02 Policy making has always involved uncertainty however the presence of unknowns has become far more conspicuous and problematic in recent times One important way in which policy

makers have increasingly sought to deal with such uncertainty is through approaches rooted in understandings of risk This book comprises a rather diverse collection of six chapters alongside one more explicitly theoretical introduction each taking up a distinct perspective in scrutinising the relationship between policy risk and uncertainty Important concerns addressed within these different studies include how risk governance policies are shaped by risk awareness or a lack thereof and the mediating role of trust the framing of policy through an emphasis on particular risks and the corresponding impact on societal beliefs discourses and institutional power the organisational processes which lead to some risks being tackled while others are neglected and processes of de politicising uncertainty at the interface between scientists and policy makers Contributors explore trans national institutions national bodies and local government within diverse geographical contexts including China Brazil the Baltic Sea Australia the UK and Europe This book was originally published as a special issue of the Journal of Risk Research

New Perspectives in Climate Change Emerald Group Publishing Limited,2015-10-29 New Perspectives in Climate Change is a unique collection of articles that discuss key areas of research among academics in the field These include the following Climate change adaptation Vulnerability to and mitigation of climate change This collection provides an unparalleled insight into the subject of climate change
