industrial leadership from the Industrial Revolution to the beginning of the twenty first century the book draws on historical and comparative methods to draw causal inferences about international progress and leadership It explores various factors that promote or hinder technological advancement and how these can in turn effect national development It concludes that where states have forged ahead and maintained a lead over their rivals it is because consensus and cohesion prevented vested interests from growing powerful enough to block structural economic change By applying economic theory to long term historical models this book offers a fascinating perspective on the causes and effects of national growth and industrial leadership It will be invaluable reading for anyone with an interest in international relations and global economic trends both modern and historical
