Global Rangelands Progress And Prospects:

Global Rangelands A. C. Grice, K. C. Hodgkinson, 2002-07-29 Although traditionally defined as areas where natural vegetation is exploited for grazing by domestic and native herbivores rangelands are used by many different people for a host of purposes As well as livestock products rangelands provide fuels minerals and water and are used for ecotourism recreation nature conservation and as carbon sinks More than half of the earth's land surface is rangeland and millions of people both within and outside the rangelands depend on them This book addresses the important issues confronting the rangelands and presents new concepts and approaches for the management of rangeland resources It is relevant to the people who live in or depend on the rangelands and to the institutions and organisations that support them *Rangeland Systems* David D. Briske, 2017-04-12 This book is open access under a CC BY NC 2.5 license This book provides an unprecedented synthesis of the current status of scientific and management knowledge regarding global rangelands and the major challenges that confront them It has been organized around three major themes The first summarizes the conceptual advances that have occurred in the rangeland profession The second addresses the implications of these conceptual advances to management and policy The third assesses several major challenges confronting global rangelands in the 21st century This book will compliment applied range management textbooks by describing the conceptual foundation on which the rangeland profession is based It has been written to be accessible to a broad audience including ecosystem managers educators students and policy makers The content is founded on the collective experience knowledge and commitment of 80 authors who have worked in rangelands throughout the world Their collective contributions indicate that a more comprehensive framework is necessary to address the complex challenges confronting global rangelands Rangelands represent adaptive social ecological systems in which societal values organizations and capacities are of equal importance to and interact with those of ecological processes A more comprehensive framework for rangeland systems may enable management agencies and educational research and policy making organizations to more effectively assess complex problems and develop appropriate solutions [Towards Sustainable Use of Rangelands in North-West China](#) Victor Squires, Limin Hua, Degang Zhang, Guolin Li, 2010-09-21 Towards Sustainable Use of Rangelands in China's North West is based on the program of the International Conference Implementing GEF Objectives in a Systems Framework held in Lanzhou Gansu China in October 2008 This collection reviews the extent of resource debasement in China's pastoral zones and offers solutions for their sustainable use The five parts deal with rangelands and the people who manage them and assess prospects for implementation of more sustainable rangeland livestock production systems Topics include Livestock husbandry development and agro pastoral integration in Gansu and Xinjiang Ecological restoration and control of rangeland degradation Despite widespread degradation the articles reveal the approaches that are likely to lead to recovery of these rangelands and better livelihoods for the local herders and farmers Two chapters are devoted to the achievement of global environmental objectives Carbon

sequestration and biodiversity conservation in mountain grasslands are just a few of the covered subjects This portion of the book pays special attention to the successful results in Gansu and Xinjiang major regions of China's pastoral lands The final division addresses measures to improve the profitability and sustainability of herding and farming in the pastoral areas of north west China There are fifteen chapters on subjects that include Livestock management Rangeland management interventions Agro pastoral integration Improved animal husbandry practices as a basis for profitability Land tenure and access Environmental education Ecological Restoration and New Management approaches for China's northwest pastoral areas The Rangeland Journal ,2005 Remote Sensing Handbook - Three Volume Set Prasad Thenkabail,2018-10-03 A volume in the three volume Remote Sensing Handbook series Remote Sensing of Water Resources Disasters and Urban Studies documents the scientific and methodological advances that have taken place during the last 50 years The other two volumes in the series are Remotely Sensed Data Characterization Classification and Accuracies and Land Resources **Land Restoration Through Ecosystem-Based Approach** Y. D. Imran Khan,Saurabh Purohit,Jibrin Mohammed Jibrin,Madhav Dwarkanath Gholkar,2025-09-26 This book provides a comprehensive guide to land restoration focusing on the Global South's drylands By adopting ecosystem based approaches it explores the interplay between landscapes ecosystems and socio ecological sustainability in these sensitive regions The book features diverse case studies and examines various sectors explaining the challenges posed by climate change and highlighting the role of scientific technological and traditional knowledge in fostering adaptive strategies It emphasizes practical action oriented approaches for disaster risk reduction through ecosystem based approaches By offering tangible solutions the text goes beyond theoretical frameworks serving as a valuable resource for action research The book aims to inspire efforts to restore and safeguard fragile dryland ecosystems in the Global South It addresses the urgency of environmental challenges in these regions and presents a holistic framework integrating ecological social cultural and technological dimensions This book is relevant to a diverse audience including researchers environmental practitioners policymakers and conservationist advocates Overall it serves as an essential reference for those dedicated to positively impacting the delicate ecological balance in the drylands of the Global South

Stewardship and the Future of the Planet Rachel Carnell,Chris Mounsey,2022-07-22 This volume examines historical views of stewardship that have sometimes allowed humans to ravage the earth as well as contemporary and futuristic visions of stewardship that will be necessary to achieve pragmatic progress to save life on earth as we know it The idea of stewardship human responsibility to tend the Earth has been central to human cultures throughout history as evident in the Judeo Christian Genesis story of the Garden of Eden and in a diverse range of parallel tales from other traditions around the world Despite such foundational hortatory stories about preserving the earth on which we live humanity in the Anthropocene is nevertheless currently destroying the planet with breathtaking speed Much research on stewardship today in the disciplines of geography urban studies oceans research and green business practice offers insights that should help address

the ecological challenges facing the planet Simultaneous scholarship in the humanities and other fields reminds us that the damage done to the planet has often been carried out in the name of tending the land In order to make progress in environmental stewardship scholars must speak to each other across the disciplinary boundaries as they do in this volume

Land Resources Monitoring, Modeling, and Mapping with Remote Sensing Ph.D., Prasad S.

Thenkabail,2015-10-02 A volume in the three volume Remote Sensing Handbook series Land Resources Monitoring Modeling and Mapping with Remote Sensing documents the scientific and methodological advances that have taken place during the last 50 years The other two volumes in the series are Remotely Sensed Data Characterization Classification and Accuracies and Remote Sensing of Water Resources Disasters and Urban Studies In true handbook style the chapters in the volume have been carefully selected organized and designed to be self contained so that you can focus on a chapter and read it through without having to be overly dependent on other chapters This volume provides comprehensive theoretical and practical coverage of remote sensing of land resources that include vegetation and biomass agricultural croplands rangelands phenology and food security forests biodiversity ecology land use land cover carbon and soils Highlights include Global terrestrial carbon and carbon budgets Precision farming Agricultural systems studies and soil studies Global croplands agricultural croplands and rangelands Food security analysis Biodiversity Land use and land cover mapping Measuring photosynthesis from space Vegetation characterization and above ground biomass measurements and modeling Hyperspectral remote sensing Ecological studies Tropical forest characterization Habitat mapping and monitoring In a very practical way the book demonstrates the experience utility methods and models used in studying a wide array of land applications With more than 100 leading global contributors this book is the most comprehensive documentation of the scientific and methodological advances that have taken place in understanding remote sensing data methods and applications over last 50 years In a very practical way the book demonstrates the experience utility methods and models used in studying a wide array of Land applications

Modern Trends in Applied Terrestrial Ecology R.S. Ambasht,Navin K. Ambasht,2012-12-06 Ecology and economics have Greek roots in oikos for household logos for study and nomics for management Thus ecology and economics should have complemented one another for a proper growth and development without destruction but unfortunately rapid industrialization lure for fast financial gains and commercialization activities have led to a widespread surge in pollution load environmental degradation habitat destruction rapid loss of biodiversity sudden rise in rate of extinction of many wildlife and wild relatives of domesticated animals and cultivated cereals and other plants global climate changes creating global rise in temperature and CO levels and increased ultraviolet B at ground 2 level Although these threats to human health have led us to look to ecology for their solutions and guidance for sustainable development without destruction the industrial and technology houses are looking for alternative methods of development and resource use methods The two global conferences of the United Nations in 1972 and 1992 and international programs of

Rangeland Wildlife Ecology and Conservation Lance B. McNew, David K. Dahlgren, Jeffrey L. Beck, 2023-09-01 This open access book reviews the importance of ecological functioning within rangelands considering the complex inter relationships of production agriculture ecosystem services biodiversity and wildlife habitat More than half of all lands worldwide and up to 70% of the western USA are classified as rangelands uncultivated lands that often support grazing by domestic livestock The rangelands of North America provide a vast array of goods and services including significant economic benefit to local communities while providing critical habitat for hundreds of species of fish and wildlife This book provides compendium of recent data and synthesis from more than 100 experts in wildlife and rangeland ecology in Western North America It provides a current and in depth synthesis of knowledge related to wildlife ecology in rangeland ecosystems and the tools used to manage them to serve current and future wildlife biologists and rangeland managers in the working landscapes of the West The book also identifies information gaps and serves as a jumping off point for future research of wildlife in rangeland ecosystems While the content focuses on wildlife ecology and management in rangelands of Western North America the material has important implications for rangeland ecosystems worldwide

Climate Change Impact and Adaptation in Agricultural Systems Jurg Fuhrer, Peter J Gregory, 2014-06-18 The focus of this book is future global climate change and its implications for agricultural systems which are the main sources of agricultural goods and services provided to society These systems are either based on crop or livestock production or on combinations of the two with characteristics that differ between regions and between levels of management intensity In turn they also differ in their sensitivity to projected future changes in climate and improvements to increase climate resilience need to be tailored to the specific needs of each system The book will bring together a series of chapters that provide scientific insights to possible implications of projected climate changes for different important types of crop and livestock systems and a discussion of options for adaptive and mitigative management

Remote Sensing Handbook, Volume III Prasad S. Thenkabail, 2024-11-29 Volume III of the Six Volume Remote Sensing Handbook Second Edition is focused on agriculture food security vegetation phenology rangelands soils and global biomass modeling mapping and monitoring using multi sensor remote sensing It discusses the application of remote sensing in agriculture systems analysis phenology cropland mapping and modeling terrestrial vegetation studies physically based models food and water security precision farming crop residues global view of rangelands and soils This thoroughly revised and updated volume draws on the expertise of a diverse array of leading international authorities in remote sensing and provides an essential resource for researchers at all levels interested in using remote sensing It integrates discussions of remote sensing principles data methods development applications and scientific and social context **FEATURES** Provides the most up to date comprehensive coverage of remote sensing science in agriculture vegetation and soil studies Discusses and analyzes data from old and new generations of satellites and sensors spread across 60 years Provides comprehensive assessment of modeling mapping and monitoring agricultural crops vegetation and soils from wide array of sensors methods and techniques Includes numerous case studies on advances and applications at local regional and global scales Introduces advanced methods in remote sensing such as machine learning cloud computing and AI Highlights scientific achievements over the last decade and provides guidance for future developments This volume is an excellent resource for the entire remote sensing and GIS community Academics researchers undergraduate and graduate students as well as practitioners decision makers and policymakers will benefit from the expertise of the professionals featured in this book and their extensive knowledge of new and emerging trends

Terrestrial Ecosystems in a Changing World Josep G. Canadell, Diane E. Pataki, Louis F. Pitelka, 2007-01-10 Over 100 authors present 25 contributions on the impacts of global change on terrestrial ecosystems including key processes of the earth system such as the CO₂ fertilization effect shifts in disturbances and biome distribution the saturation of the terrestrial carbon sink and changes in functional biodiversity ecosystem services such the production of wheat pest control and carbon storage in croplands and sensitive regions in the world threaten by rapid changes in climate and land use such as high latitudes ecosystems tropical forest in Southeast Asia and ecosystems dominated by Monsoon climate The book also explores new research developments on spatial thresholds and nonlinearities the key role of urban development in global biogeochemical processes and the integration of natural and social sciences to address complex problems of the human environment system

Increasing Carbon Soil Sequestration on Public Lands United States. Congress. House. Committee on Natural Resources. Subcommittee on Public Lands and Environmental Regulation, 2015

Complexity and Ecosystem Management Marco Janssen, 2002-01-01 The quality of ecosystems is affected by the actions of different stakeholders who use them in a variety of ways In order to understand this complex relationship between humans and nature it is vital to understand the complexity of the interacting agents The authors in this book attempt to do this by applying multi agent systems to the problems of ecosystem management The multi

agent approach to ecosystem management is a relatively new and rapidly developing field which takes a formal computational approach towards the interaction of humans with their environment The authors highlight some of the promising new methodologies which are emerging in the field from disciplines such as computer science and computational social science They move on to address a number of important topics including diffusion processes common pool resources land use change and the participatory use of models in an attempt to solve contemporary management issues They clearly demonstrate the potential utility of multi agent systems in the context of theoretical problems and practical case studies

Structure and Function of a Chihuahuan Desert Ecosystem Kris M. Havstad, Laura F. Huenneke, William H. Schlesinger, 2006-07-20 The Jornada Basin LTER is located in the Chihuahuan Desert the largest in North America This region of south central New Mexico has a history of nearly 100 years as the basis for scientific research This work gives a thorough encompassing review of the tremendous array of observations resulting from experiments conducted in this ecosystem Beginning with thorough descriptions of the most salient features of the region the book then reviews a wide range of archived and active data sets on a diversity of biotic and abiotic features It next presents a synthesis of important topics including livestock grazing and remediation efforts A concluding chapter provides a synthesis of the principles that have emerged from this body of work and how these relate to the broader fields of ecology and natural resource management It concludes with recommendations for future research directions The insightful views expressed in this volume should guide management of arid landscapes globally This is the sixth volume in the Long Term Ecological Network Series

Conceptual Ecology and Invasion Biology: Reciprocal Approaches to Nature Marc W. Cadotte, Sean M. McMahon, Tadashi Fukami, 2006-07-19 The conservation threat represented by invasive species is well known but the scientific opportunities are underappreciated Invasion studies have historically been largely directed at the important job of collecting case studies Invasion biology has matured to the point of being able to incorporate itself into the heart of ecology and should be viewed as extensions or

critical experiments of ecological theory In this edited volume global experts in ecology and evolutionary biology explore how theories in ecology elucidate the invasion processes while also examining how specific invasions informs ecological theory This reciprocal benefit is highlighted in a number of scales of organization population community and biogeographic while employing example invaders in all major groups of organisms and from a number of regions around the globe The chapters in this volume utilize many of the cutting edge observational experimental analytical and computational methods used in modern ecology Through merging conceptual ecology and invasion biology we can obtain a better understanding of the invasion process while also developing a better understanding of how ecological systems function
