Globalism Localism And Identity New Perspectives On The Transition To Sustainability:

Globalism, Localism, and Identity Timothy O'Riordan, 2001 Distinguished international contributors look at the rapidly changing relationship between globalism and localism through a range of European case studies Global economic and social forces are affecting everyone but their influence is shaped by local identity history governance community cohesion The different patterns of change and the explanations for them are displayed and explained in this volume It makes an original and important contribution to the study of contemporary societies

Globalism, Localism, and Identity Timothy O'Riordan, 2010-09-23 Global economic and social forces are affecting everyone everywhere However their influence is shaped by local communities interpretation of these forces and responses to them Social identities provide a guide they are the product of history culture economy patterns of governance and degree of community cohesion How the global and the local connect and reconfigure at various scales and through different cultures is explained in this forward looking volume The book's thesis namely that localism is the crucial complement to globalism is supported by a range of European case studies Local responses to globalizing forces depend on the nature of the interlinkages in governance from international structures through multilateral organizations to nation states regions and localities as these are mediated through social local identity The contributors draw on numerous themes in examining the interaction between the global and the local such as decay and revitalization local identity and empowerment opportunism through sustainability and governance for the transition This is a pioneering publication utilizing an innovative person centred methodology It makes an original and important contribution to the study of contemporary societies and is aimed at anyone interested in the social economic political cultural and environmental implications of any move towards sustainability

Cities and Climate Change Michelle Betsill, Harriet

Bulkeley,2003-08-27 Climate change is one of the most challenging issues of our time As key sites in the production and management of emissions of greenhouse gases cities will be crucial for the implementation of international agreements and national policies on climate change This book provides a critical analysis of the role of cities in addressing climate change and the prospects for urban sustainability Cities and Climate Change is the first in depth analysis of the role of cities in addressing climate change The book argues that key challenges concerning the resources and powers of local government as well as conflicts between local goals for economic development and climate change mitigation have restricted the level of local action on climate change These findings have significant implications for the prospects of mitigating climate change and achieving urban sustainability This book provides a valuable interdisciplinary analysis of these issues and will appeal to students and researchers interested in sustainability at local and global scales **World Cities and Urban Form** Mike

Jenks,Daniel Kozak,Pattaranan Takkanon,2013-12-02 This book presents new research and theory at the regional scale showing the forms metropolitan regions might take to achieve sustainability At the city scale the book presents case studies based on the latest research and practice from Europe Asia and North America showing how both planning and flagship design can propel cities into world class status and also improve sustainability The contributors explore the tension between polycentric and potentially sustainable development and urban fragmentation in a physical context but also in a wider cultural social and economic context **Sustainability and the City** Lauren Curtright,Doris Bremm,2017-07-28

Sustainability and the City Urban Poetics and Politics contributes to third generation discourse on sustainable development by considering through a humanistic lens theories and practices of sustainability in a wide range of urban cultures It demonstrates cities inextricability from discussions on sustainability because not only is the world urbanizing at an unprecedented rate but also cities are primary locations of the circulation of excess capital socioeconomic divisions and hierarchies political resistance friction between human and non human worlds and the confluence of art policy and identity formation in placemaking With essays by scholars working in a variety of fields from architecture to literature to music to sociology this collection maintains that any hope for achieving urban sustainability will require taking seriously the ways in which cities are imagined Efforts to make cities sustainable must fully incorporate the humanities because critical endeavors and creative expressions that fall within the purview of the humanities are vital to closing the conceptual gulf as well as the practical gap between human and non human conservation Even if the environmental humanities embrace cities critics must ask whether coalescing the terms sustainability and city may actually obstruct human action to combat climate change which from some angles seems impending self imposed apocalypse To examine the urban turn Sustainability and the City attends to culture Essays in the first part of the collection approach urban sustainability from various disciplinary vantage points to emphasize history ideology pedagogy and critical theory The second part of the collection analyzes urban commons on four different continents Finally the collection moves from a diverse set of interpretations of on the ground urban phenomena to a

compilation of readings of sustainability in different media and genres sound art drama fiction and film set in or evocative of cities The collection carves out a place for artists and critics to help realize social justice in cities which generate remarkable power but power that is too often and too easily used destructively unfairly and wastefully despite cities unique capacities to inspire and sustain humanity

Sustainable Development Susan Baker, 2006-04-07 The promotion of sustainable development opens up the debates surrounding our relationship with the natural world what constitutes social progress and the character of development in the present and into the future Answering the need for an introductory comprehensive yet critical book that explores the challenges involved in the implementation of sustainable development this revealing text investigates this subject across different socio political and economic contexts It combines an examination of the institutional engagement with sustainable development at a global level with an empirically informed discussion on challenges facing high consumption societies economies in transition and third world countries in their efforts to achieve sustainable development Recognizing that promoting sustainable development is a quintessentially global task the book focuses on the authoritative Brundtland formulation of sustainable development and the role of the United Nations Summits in promoting this vision The empirical focus of the book is complemented by strong conceptual discussions as sustainable development is explored as part of new efforts albeit tentative to integrate environmental economic and more recently social considerations into a new development paradigm Providing an accessible up to date and comprehensive treatment of the issues surrounding the promotion of sustainable development this unique internationally focused book combines a strong conceptual analysis with wide ranging empirical focus and a wealth of case material Including summary points and suggestions for further reading as well as web resources and an extensive bibliography it is ideal for students scholars and researchers in the fields of environmental sciences politics sociology and development studies

Environmental Law and Policy in Wales Patrick Bishop, Mark Stallworthy, 2013-02-15 This book examines welsh perspectives on the search for sustainable law and policy solutions to modern environmental threats

Sustainability, Local Democracy and the Future: The Swedish Model U. Svedin, Britt Hägerhäll Aniansson, 2011-06-27 This book deals with the challenges posed by the transformation of society towards much needed sustainability Especially it deals with the local features of this change but seen in a global context The two cases examined the municipalities of Linköping and Älvåker are Swedish but the problems of how to relate locally to a globalized world are common today The cases have been deliberately chosen to expose alternative types of choices for the local communities involved Large Linköping is historically a nodal city of importance in the national grid of regional centres one that relates to the nation state and represents officialdom Small Älvåker developed in the context of its forest region setting and metallurgy and today operates directly to wider markets while still emphasising its very local identity The fact that these municipalities border each other provides a similar regional context and differences between them may then not be entirely confused by a debate on drastically different geographical settings

Planning for Tourism Nigel D

Morpeth, Hongliang Yan, 2015-05-01 This text provides an innovative approach to the pedagogy of contemporary planning processes within different cultural contexts globally It adopts an innovative multi disciplinary social science approach and through the inclusion of international case studies considers the extent to which intelligent design has enabled the needs of disabled residents and visitors to have universal access to social spaces and facilities In incorporating the consideration into the fabric of the book it will encourage the mainstreaming of universal design and accessible tourism as keystones of planning processes within the C21st

Measuring Wellbeing: Towards Sustainability? Karen Scott, 2012-07-26
Improving wellbeing and sustainability are central goals of government but are they in conflict This engaging new book reviews that question and its implications for public policy through a focus on indicators It highlights tensions on the one hand between various constructs of wellbeing and sustainable development and on the other between current individual and societal notions of wellbeing It recommends a clearer conceptual framework for policy makers regarding different wellbeing constructs which would facilitate more transparent discussions Arguing against a win win scenario of wellbeing and sustainability it advocates an approach based on recognising and valuing conflicting views where notions of participation and power are central to discussions Measuring Wellbeing is divided into two parts The first part provides a critical review of the field drawing widely on international research but contextualised within recent UK wellbeing policy discourses The second part embeds the theory in a case study based on the author's own experience of trying to develop quality of life indicators within a local authority against the backdrop of increasing national policy interest in measuring happiness This accessible and informative book covering uniquely both practice and theory will be of great appeal to students academics and policy makers interested in wellbeing sustainable development indicators public policy community participation power and discourse

[The Mediation of Sustainability](#) Ben Harbisher, 2023-03-14 In 2015 the United Nations set out an ambitious plan under UN Resolution 70 1 to prioritize seventeen separate goals over a fifteen year period to promote health life equality and the environment The Sustainable Development Goals include ending poverty and hunger reducing inequality promoting good health and well being quality education gender equality clean water and sanitation affordable and clean energy decent work and economic growth industry innovation and infrastructure sustainable cities and communities responsible consumption and production climate action life under water life on land peace justice and strong institutions and developing partnerships to achieve these goals This book examines the way in which SDG initiatives have been disseminated by mainstream media in government discourse and by NGO's charitable organisations and campaign groups It questions to what extent sustainability narratives are being supported and how they are represented how saving the environment can be made pertinent to someone who has no access to clean food or running water and why local initiatives in which indigenous populations are making a real difference are overshadowed by

Decentralization in Environmental Governance Christian Zuidema,2016-10-04 Decentralization in Environmental Governance is a critical reflection on the dangers and risks of governance renewal warning against one sided criticism on traditional command and control approaches to planning The book formulates the arguments that support when and how governance renewal might be pursued but this attempt is not just meant for practitioners and scholars interested in governance renewal It is also useful for those interested in the challenge of navigating a plural landscape of diverse planning approaches which are each rooted in contrasting theoretical and philosophical positions The book develops a strategy for making argued choices between alternative planning approaches despite their theoretical and philosophical positions It does so by revitalizing the idea that we can contingently relate alternative planning approaches to the circumstances encountered It is an idea traced to contingency studies of the mid and late 20th century reinterpreted here within a planning landscape dominated by notions of uncertainty complexity and socially constructed knowledge This approach called Post contingency is both a theoretical investigation of arguments for navigating the theoretical plurality we face and an empirical study into renewing environmental governance Next to its theoretical ambitions Decentralization in Environmental Governance is practical in offering a constructive critique on current processes of governance renewal in European environmental governance *Governing Sustainability* W. Neil Adger,Andrew Jordan,2009-02-05 The crisis of unsustainability is above all else a crisis of governance The transition to a more sustainable world will inevitably require radical changes in the actions of all governments and it will call for significant changes to the lifestyles of individuals everywhere Bringing together some of the world s most highly regarded experts on governance and sustainable development this book examines these necessary processes and consequences across a range of sectors regions and other important areas of concern It reveals that the governance of sustainable development is politically contested and that it will continue to test existing governance systems to their limits As an assessment of existing policy practices it will be of great interest to all those who are preparing themselves or their organisations for the sustainability transition **Sustainability in Fashion: Creativity, Education, and Innovation** Alexandra Cruchinho,José Carlos Neves,2025-07-02 Sustainability in Fashion Creativity Education and Innovation is a book that focuses on how sustainability can be integrated into the fashion and clothing industry The set of

chapters provides peer reviewed research covering a wide range of topics mainly focused on how sustainability can be incorporated into fashion and textile education how consumer behaviour and marketing affect sustainability in fashion and vice versa and how circular economy principles can be incorporated into clothing and textile supply chains The chapters in this proceedings volume examine sustainability not only from the perspective of academia but also from the perspective of industry Working across sectors in this manner can facilitate the development of real projects that can greatly contribute to sustainability in the fashion industry
