the incredible complexity of the world described by understanding the environment and society as being of a piece. As a result in the last decade there has been an unprecedented explosion of new concepts, theories, facts and techniques that follow from such an understanding. Rather, they capture the spirit of the moment, a fascinating time when global warming and genetic engineering represent only two of the most obvious examples of socio-environmental issues.

**Key Features:** Examines many new ideas about how the world works, what creates the daunting problems of our time and how such issues might be addressed, whether by regulation, markets or new ethics. Offers contributions from experts in their fields of specialty including geographers, political scientists, chemists, anthropologists, medical practitioners, development experts and sociologists among many others. Explores the emerging socio-environmental problems that we face in the next century as well as the shifting and expanding theoretical tools available for tackling these problems. Covers regions of North America in greater detail but also provides a comprehensive picture that approaches as effectively as possible a cohesive global vision.

**Water, Agriculture and the Environment in Spain: can we square the circle?** Lucia De Stefano, M. Ramon Llamas, 2012-10-17

The world water problems are due to bad governance, not to physical water scarcity. This book is inspired by this statement and explores whether it holds in a specific country, Spain, where climatic conditions. Spain is one of the most arid countries of the European Union, would fully justify saying that water problems are due to physical water scarcity. The metrification of water uses and their monetary value is a first important step in understanding how reallocation of water among users could help mitigating many of current water problems in Spain. However, water reallocation among users or from users to nature is far from simple. Initiatives portrayed as the solution to the water governance jigsaw, e.g. water trade, improved water use efficiency, users' collective action, public participation, are not free of difficulties and shortcomings. The book explores the growing need for maintaining Spain's natural capital and the human component of water governance, people's needs, wishes

vested interests aspirations that often determine the result of decisions and sometimes lead water management to a deadlock  
This book takes a step forward in showing a more complex and also closer to reality picture of water governance in Spain
