

Optics Glossary

Abbe Number: The constant of an optical medium that describes the ratio of its refractivity to its dispersion.

Specifically, $V_d = (n_d - 1) / (n_F - n_C)$, where n is the index of refraction at the Fraunhofer d, F, and C lines, respectively.

Aberration: An optical defect resulting from design or fabrication error that prevents the lens from achieving precise focus. The primary aberrations are spherical, coma, astigmatism, field curvature, distortion, and chromatic aberration.

Achromatic Lens: Lens in which chromatic aberration has been corrected at a minimum of two wavelengths.

Airy Disc: A pattern of illumination caused by diffraction at the edge of a circular aperture, consisting of a central core of light surrounded by concentric rings of gradually decreasing intensity.

Anamorphic: Distorted, as in an optical system with different magnification levels or with focal lengths perpendicular to the optical axis.

Angle of Incidence: The angle formed by a ray of light striking a surface and the normal to that surface.

Antireflection (AR) Coating: A thin layer of material that, when applied to a lens or window, increases its transmittance by reduction of its reflectance. AR coatings may be multilayer or single layer coatings.

Aperture: An opening through which light may pass. The clear aperture is that area in an optical system limiting the bundle of light able to pass through the system.

Aspheric: Not spherical. To reduce spherical aberration, a lens may be altered slightly so that one or more surfaces are aspheric.

Astigmatism: An aberration in a lens in which the tangential and sagittal (horizontal and vertical) lines are focused at two different points along the optical axis.

Back Focal Length (BFL): The distance between the last surface of a lens to its image focal plane.

Bandpass: The range of wavelengths that passes through a filter or other optical component.

Bandwidth: Range of wavelengths over which the specified transmission or reflection occurs.

Beam Deviation: See Deviation.

Beamsplitter: An optical device that divides an incident beam into at least two distinct beams.

Bi-Concave: Having two outer surfaces that curve inward.

Bi-Convex: Having two outer surfaces that curve outward.

Birefringence: The change in refractive index with the polarization of light. A birefringent crystal, such as calcite or quartz, will divide an unpolarized beam into two beams (ordinary and extraordinary) having opposite polarization.

Blocking: Refers to filter transmittance outside the bandpass region. It is the rejection of out-of-band wavelengths by a filter.

Blur Circle: The image of a point-source object formed by an optical system on its focal surface. The precision level of the lens and its state of focus determine the size of the blur.

Borosilicate Glass: An optical glass containing boric oxide, along with silica and other ingredients. BK 7 and Pyrex® are examples of borosilicate glasses.

Brewster's Angle: For light incident on a plane boundary between two materials having different index of refraction, that angle of incidence at which the reflectance is zero for light that has its electrical field vector in the plane defined by the direction of propagation and the normal to the surface. For propagation from material 1 to material 2, Brewster's angle is given as $\tan^{-1}(n_2/n_1)$.

Broadband Coating: A multilayer coating with specified reflection or transmission over a broad spectral band. Newport's AR 14 is a broadband AR coating, while Newport BD-1 is broadband mirror coating.

Cavity: A periodic structure of thin films comprised of two quarter-wave stack reflectors separated by a dielectric spacer. Cavities are the building blocks of bandpass filters.

Center Wavelength: The center of the wavelength band of a coating.

Centration: The deviation between the optical axis and the mechanical axis of a lens. Centration is specified in terms of the deflection of a beam directed along the mechanical axis of the lens.

Chromatic Aberration: An optical defect in a lens resulting in different wavelengths of light focusing at different distances from the lens. Corrected by achromatic lenses.

Circle of Least Confusion: The smallest cross-section of a focused beam of light at the point of best focus for the image.

Clear Aperture: The area of an optical component that controls the amount of light incident on a given surface. In Newport lenses and mirrors, the clear aperture gives the diameter over which specifications are guaranteed.

Coefficient of Thermal Expansion: A material property defined as the fractional change in length per original length (or fractional change in volume) with a change in temperature.

Collimated Beam: A beam of light in which all of the rays are parallel to each other.

Coma: An aberration that occurs in a lens when rays emanating from points not on the optical axis do not converge, causing the image of a point to appear comet-shaped.

Cone Angle: The central angle of a cone of rays converging to or diverging from a point. See Numerical Aperture.

In 1979 the National Communications System published Technical Information Bulletin TB 79-1 Vocabulary for Fiber Optics and Lightwave Communications written by this author. Based on a draft prepared by this author the National Communications System published Federal Standard FED STD 1037 Glossary of Telecommunications Terms in 1980 with no fiber optics terms. In 1981 the first edition of this dictionary was published under the title Fiber Optics and Lightwave Communications Standard Dictionary. In 1982 the then National Bureau of Standards, now the National Institute of Standards and Technology, published NBS Handbook 140 Optical Waveguide Communications Glossary, which was also published by the General Services Administration as PB82-166257 under the same title. Also in 1982 Dynamic Systems Inc. Fiber Optic Sensor Technology Handbook co-authored and edited by this author with an extensive Fiber Optic Sensors Glossary. In 1989 the handbook was republished by Optical Technologies Inc. It contained the same glossary. In 1984 the Institute of Electrical and Electronic Engineers published IEEE Standard 812-1984 Definitions of Terms Relating to Fiber Optics. In 1986 with the assistance of this author the National Communications System published FED STD 1037A Glossary of Telecommunications Terms with a few fiber optics terms. In 1988 the Electronics Industries Association issued EIA 440A Fiber Optic Terminology based primarily on PB82-166257. The International Electrotechnical Commission then published IEC 731 Optical Communications Terms and Definitions. In 1989 the second edition of this dictionary was published.
