**Education, Culture and Epistemological Diversity** Claudia W. Ruitenberg,D.C. Phillips,2011-09-24 In the recent educational research literature it has been asserted that ethnic or cultural groups have their own distinctive epistemologies and that these have been given short shrift by the dominant social group Educational research then is pursued within a framework that embodies assumptions about knowledge and knowledge production that reflect the interests and historical traditions of this dominant group In such arguments however some relevant philosophical issues remain unresolved such as what claims about culturally distinctive epistemologies mean precisely and how they relate to traditional epistemological distinctions between beliefs and knowledge Furthermore can these ways of establishing knowledge stand up to critical scrutiny This volume marshals a variety of resources to pursue such open questions in a lively and accessible way a critical literature review analyses from philosophers of education who have different positions on the key issues a roundtable discussion and interactions between the two editors who sometimes disagree It also employs the work of prominent feminist epistemologists who have investigated parallel issues with sophistication This volume does not settle the question of culturally distinctive epistemologies but teases out the various philosophical sociological and political aspects of the issue so that the debate can continue with greater clarity

for this body of educational research Diversity in EE research is also compounded when one considers the various cultures epistemologies and research traditions that may inform the field This complexity accounts for the range of forms for environmental learning in formal informal or non formal contexts There is a good deal of evidence that in order to be more responsive to the needs of diverse populations program developments around the world are now beginning to reflect the variation in our society However the same cannot always be said in terms of research methodologies within mainstream environmental education research Outside of a few examples there seems to have been very little in the way of development of research genres aimed at understanding characterizing and supporting cultural diversity within much of mainstream environmental education Diversity of method may also be important for the overall quality or health of environmental education research To locate many of the new ideas and approaches in this area one needs to look outside environmental education towards general educational research or to other fields such as environmental justice indigenous education science education and health education to name only a few examples This volume of original research reports from around the globe begins to richly describe aspects of diversity in environmental education research It does so in two ways first it mirrors the diversity of voices and cultures that are conducting research in this ever broadening and increasingly global and international field of inquiry second it illuminates a potential diversity of research methods by highlighting a range of methodologies salient in other fields which have emerging promise for the practice of research in environmental education

**Towards Methodologically Inclusive Research Syntheses** Harsh Suri, 2013-07-31 Primary research in education and social sciences is marked by a diversity of methods and perspectives. How can we accommodate and reflect such diversity at the level of synthesizing research? What are the critical methodological decisions in the process of a research synthesis and how do these decisions open up certain possibilities while closing down others? This book draws upon methodologically diverse literature on research synthesis methods and primary research methods to develop a framework for synthesizing research. It presents a Methodologically Inclusive Research Synthesis framework to facilitate critical and informed decision making among the producers and users of research synthesis. Three guiding principles for a quality research synthesis are proposed: informed subjectivity and reflexivity, purposefully informed selective inclusivity, and audience appropriate transparency. The book then provides a thorough discussion of how these principles might be enacted in the following six phases: identifying an appropriate epistemological orientation, identifying an appropriate purpose, searching for relevant literature, evaluating, interpreting, and distilling evidence from selected studies, constructing connected understandings, and communicating with an audience. A wide range of techniques and perspectives from postpositivist, interpretive, participatory, critical, and postmodern traditions are considered in the book, and Suri opens up new areas of debate by exploring numerous aspects of research syntheses from a methodologically inclusive perspective. The book will be valuable reading for researchers and postgraduates in education and social sciences.
