Balancing Act J P Hamish Kimmins, 2011-01-01 In the past decade there has been much debate over the environmental impact of forestry People are justifiably concerned about what is happening to the local and global forest environments but they are also confused by the polarized rhetoric that has characterized both sides of the debate In *Balancing Act* Hamish Kimmins calls for a balanced more objective approach to forestry issues in order to bridge the gap between the most extreme opponents in the debate He suggests that we need to begin with a common understanding of what forestry is about and how forest ecosystems work He outlines the scientific and ecological aspects of the major environmental issues facing British Columbia and the world today arguing that we need to disentangle the scientific from the value based social aspects of these questions He also contends that much of the current debate about forests and their management ignores the time dimension of ecosystems and he calls for a more dynamic view

of current environmental issues in forestry one that accounts for change The first few chapters provide an outline of the basic principles of forestry and ecology and subsequent chapters discuss the major environmental issues facing forestry in the 1990s These include clearcutting slashburning management chemicals old growth biological diversity new forestry climate change acid rain the comparison between temperate and tropical forestry and long term decisions in forestry Balancing Act is essential reading for those who are searching for an objective accurate and readable evaluation of the issues at the heart of the forestry environment debate By emphasizing that forests are not static but change over time Kimmins adds an important often ignored dimension to the discussion Only by understanding all the intricacies of the ecosystems can we learn to manage our forests in a sustainable fashion *Acid Rain and Related Air Pollution Research* ,1987 The Acidic Deposition Phenomenon and Its Effects ,1984 **The Oxford Companion to Global Change** David J. Cuff,2008 In recent years global change has become increasingly important in technological ecological and political spheres This companion examines the environmental events of recent times and investigates long term trends as well as broader issues of global change Selected Water Resources Abstracts ,1991 **The Acid Rain Debate** Ernest J Yanarella,Randal H. Ihara,2019-07-11 This collection of essays by noted academicians lawyers energy agency administrators and research analysts focuses on the political and legal aspects of the acid rain debate the policy options for resolving the controversy and the international dimensions of acid rain control The contributors highlight concerns drawn primarily from the developing study of acid rain in political science economics public administration and policy analysis concerns that are the focal point of the public debate over the nature impact and cost of acid rain and the mitigation of its effects The book complements the impressive body of research from the natural sciences and responds to the need for applied study to help resolve the current policy stalemate on this critical environmental issue The Acid Rain Debate features a comprehensive annotated bibliography on acid rain and relevant social science research **Effects of Air Pollution and Acid Rain on Agriculture** Joseph R. Barse,1985 *Productivity of Forests of the United States and Its Relation to Soil and Site Factors and Management Practices* Charles Crocker Grier,1989 Inventory of research under the National Acid Precipitation Assessment Program United States.
